## PREFACE AND ACKNOWLEDGEMENT

No meaningful developmental activity can be undertaken without taking into account the characteristics of the population for whom the activity is targeted. The size of the population and its spatial distribution, growth and change over time, in addition to its socio-economic characteristics are all important in development planning.

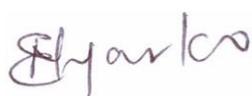

A population census is the most important source of data on the size, composition, growth and distribution of a country's population at the national and sub-national levels. Data from the 2010 Population and Housing Census (PHC) will serve as reference for equitable distribution of national resources and government services, including the allocation of government funds among various regions, districts and other sub-national populations to education, health and other social services.

The Ghana Statistical Service (GSS) is delighted to provide data users, especially the Metropolitan, Municipal and District Assemblies, with district-level analytical reports based on the 2010 PHC data to facilitate their planning and decision-making.

The District Analytical Report for the Ga East Municipality is one of the 216 district census reports aimed at making data available to planners and decision makers at the district level. In addition to presenting the district profile, the report discusses the social and economic dimensions of demographic variables and their implications for policy formulation, planning and interventions. The conclusions and recommendations drawn from the district report are expected to serve as a basis for improving the quality of life of Ghanaians through evidence-based decision-making, monitoring and evaluation of developmental goals and intervention programmes.

For ease of accessibility to the census data, the district report and other census reports produced by the GSS will be disseminated widely in both print and electronic formats. The report will also be posted on the GSS website: [www.statsghana.gov.gh](http://www.statsghana.gov.gh).

The GSS wishes to express its profound gratitude to the Government of Ghana for providing the required resources for the conduct of the 2010 PHC. While appreciating the contribution of our Development Partners (DPs) towards the successful implementation of the Census, we wish to specifically acknowledge the Department for Foreign Affairs, Trade and Development (DFATD) formerly the Canadian International Development Agency (CIDA) and the Danish International Development Agency (DANIDA) for providing resources for the preparation of all the 216 district reports. Our gratitude also goes to the Metropolitan, Municipal and District Assemblies, the Ministry of Local Government, Consultant Guides, Consultant Editors, Project Steering Committee members and their respective institutions for their invaluable support during the report writing exercise. Finally, we wish to thank all the report writers, including the GSS staff who contributed to the preparation of the reports, for their dedication and diligence in ensuring the timely and successful completion of the district census reports.

**Dr. Philomena Nyarko**  
Government Statistician

# EXECUTIVE SUMMARY

## Introduction

The district census report is the first of its kind since the first post-independence census was conducted in 1960. The report provides basic information about the district. It gives a brief background of the district, describing its physical features, political and administrative structure, socio-cultural structure and economy. Using data from the 2010 Population and Housing Census (2010 PHC), the report discusses the population characteristics of the district's, fertility, mortality, migration, marital status, literacy and education, economic activity status, occupation, employment; Information Communication Technology (ICT), disability, agricultural activities and housing conditions of the district. The key findings of the analysis are as follows (references are to the relevant sections of the report):

## Population size, structure and composition

The population of Ga East Municipal, according to the 2010 Population and Housing Census, is 147,742 representing 3.68 percent of the region's total population. Males constitute 49 percent and females represent 51 percent. About ninety percent of the population is rural. The Municipal has a sex ratio of 97.6. It has less than half (40.3%) of the population below 20 years which is not an indication of a youthful population. The total age dependency ratio for the Municipal is 52.2 with 52 in urban areas and 53.3 in rural areas. The population density of the Municipal stands at 1,725 persons per square kilometer.

## Fertility, mortality and migration

The Total Fertility Rate for the Municipal is 2.8 and it is lower than the regional figure of 2.6 while the General Fertility Rate is 84.1 births per 1000 women aged 15-49 years which is the ninth highest for the region. The Crude Birth Rate (CBR) is 25.1 per 1000 population. About seventy-two percent of the total populations of the Municipal are migrants. A higher proportion of migrants from Eastern Region (22.0%) have stayed in the Municipality for more than ten years.

## Household Size, composition and structure

The total household population in the Municipal is 144,863 with over ninety percent of the household population living in urban areas. The average household size is 3.9 persons per household. The average household size in rural areas (4.0) is slightly higher compared to households in the urban areas (3.9). Children constitute the largest proportion of the household members accounting for 36.8 percent. Households in the Municipal are more of extended family (56.2%) than nuclear family (43.8%).

## Marital status

About four in ten (41.7%) of the population aged 12 years and older are married, 45.7 percent have never married and 5.2 percent are in consensual union. A higher proportion of males (49.1%) than females (42.5%) have never been married. More females (4.6%) than males (0.7%) are widowed. Among the never married, 50.5 percent have attained basic education while 25.4 percent have secondary school education. For the married, close to one-half (48.8%) have attained basic education while less than one-tenth (6.7%) have no education. About 78.3 percent of the married population are employed, 4 percent are unemployed and 17.8 percent are economically not active.

## **Nationality**

Almost 97.5 percent of the population in the Municipal is Ghanaians; comprising 94.6 percent by birth, 2.3 percent dual nationality and 0.6 percent Ghanaians by naturalization. Nationals from ECOWAS countries constitute only 1.9 percent.

## **Literacy and education**

Of the population 11 years and above, 93.6 percent are literate and 6.1 percent are non-literate. The proportion of males (96.7%) who are literate is more than females (91.1%). A large proportion of the population can read and write in English and a Ghanaian Language (59.3%). About 33.2 percent are attending school now and 53.7 percent have attended in the past.

## **Economic activity status**

About 70 percent of the population aged 15 years and older are economically active while about one-third (30.0%) are economically not active. Of the economically active population, 92.1 percent are employed while 7.9 percent are unemployed. For those who are economically not active, a larger percentage of them are students (50.8%) while 23 percent perform household duties and 2.4 percent are disabled or too sick to work.

## **Occupation**

Of the employed population, about 35.1 percent are engaged as service and sales workers while 22.6 percent are craft and related trades workers. There are variations in occupations between the sexes. Even though higher proportions of females (53.6%) and males (18.1%) are employed as service and sales workers more females than males are engaged in this occupation. The wholesale and retail, repair of motor vehicles and motorcycles constitute the industry that employ about one-third (29.8%) of the workforce.

## **Employment status and sector**

About 43.4 percent of the employed populations in the Municipal are self-employed without employees. Females (54.6%) are more likely to be self-employed without employee(s) than males (33.1%). Self-employed with employees constitute 9.9 percent while apprentices and casual workers form 2.6 percent each. The private informal is the largest employer in the Municipal, employing overwhelming 70.9 percent of the employed persons.

## **Information communication technology**

Of the population 12 years and older, 78.9 percent have mobile phones. Men who own mobile phones constitute 82.7 percent as compared to 75.2 percent of females. Only 23.2 percent of the total population (12 years and older) use internet. More males 28.4 percent use internet compared to 18.2 percent of females. Throughout the Municipal, only 23.3 percent of households own desktop/laptop computers.

## **Disability**

About 2.4 percent of the populations in the Municipal are disabled. A higher proportion of females (2.5%) are disabled than males (2.3%). Sight disability is the most common type of disability constituting about one-half (50.6%) of PWDs in the Municipal. The major form of disability among males (45.0%) and females (55.6%) is sight disability. At the locality level, 2.4 percent of the populations in urban areas are disabled while in the rural areas it is 2.9 percent. More than one-third (39.4%) of persons with disabilities are economically active

(comprising 55.8 percent employed and 4.8 percent being unemployed). About 12.7 percent of PWDs have never attended school while 47.3 percent have attained basic education.

### **Agriculture**

As low as 5.5 percent of households in the Municipal are engaged in agriculture. Out of the households engaged in agriculture 6.4 percent are in rural areas and 5.4 percent are located in urban areas. Most households in the Municipal (80.2%) are involved in crop farming. The number of animal species kept in the District is 39,525. Out of this number, there are 671 keepers and an average of 59 livestock or other animals per keeper.

### **Housing**

The housing stock of Ga East Municipal is 23,424 representing 4.9 percent of the total number of houses in the Greater Accra Region. The average number of households per house is 1.6 while the average number of persons per house is 3.9. In the Municipal, the population per house is 6.3 persons and it is lower than the regional average of 8.4.

#### ***Type, tenancy arrangement and ownership of dwelling units***

About 32.2 percent of households in the Municipal live in compound houses and separate houses (29.9%). More than one-third (39.1%) of the dwelling units in the Municipal are owned by members of the household; 10.5 percent are owned by a relative who is not a member of the household and 44 percent are owned by private individuals. Only 1.4 percent are owned by public or government.

#### ***Material for construction of outer wall, floor and roof***

The main construction material for outer walls of dwelling units in the Municipal is cement blocks/concrete (83.7%) and wood constituting 9.2 percent. Less than two-thirds (66.1%) of floors of dwelling units in the Municipal are made with cement/concrete. Metal sheets are the main roofing material (71.3%) for dwelling units in the Municipal.

#### ***Room occupancy***

One room constitutes the highest percentage (54.2%) of sleeping rooms occupied by households in housing units in the Ga East Municipal. About 86 percent of single-person households occupy one room.

#### ***Utilities and household facilities***

Electricity from the mains (78.4%) remains the main source of lighting for dwelling units by all types of locality in the Municipality. More than one-half (54.7%) of households use gas as the main source of cooking fuel. Almost equal proportions of rural and urban households use gas as cooking fuel (54.6%) and (54.7%) respectively. Charcoal is used by only 36.3 percent of households. More than one-half of households (54.7%) in the Municipal use sachet water as their main source of water for drinking. Households using pipe-borne water (inside and outside dwelling) is 24.9 percent while those using boreholes are 6.5 percent.

About 8.2 percent of households in the Municipal do not have any toilet facility. Most households use water closets (42.9%). In the rural areas (45.2%) of the proportion of households using water closets are slightly higher than those in urban areas (42.6%). Pit latrines (22.7%) are the second most commonly used toilet facility by households with almost equal proportions in both localities, 22.3 percent in rural areas and 22.7 percent in urban

areas. One-fourth of households (40.9%) in the Municipal have own bathrooms for their exclusive use while those who share separate bathrooms is 23.9 percent.

***Waste disposal***

More than one-half of the total households in the Municipal rely on waste collection as a means of solid waste disposal. Burning of waste accounts for almost one-quarter (24.6%). The most widely used method of liquid waste disposal in the Municipal is throwing of liquid waste onto compound (33.5%). On the other hand, throwing of liquid waste into the gutter constitutes 14.9 percent.

# **CHAPTER ONE**

## **INTRODUCTION**

### **1.1 Background**

The Ga East Municipal is located at the northern part of Greater Accra Region. It is one of the Sixteen (16) Districts in the Greater Accra Region and covers a land area of about 85.7 square kilometers. The capital of the Municipal is Abokobi. It shares boundaries with the Ga West Municipal to the west, the La - Kwantanang Municipal to the east, Accra Metropolitan to the south and the Akwapim South District to the north. The Municipal is sub divided into two administrative areas, namely the Abokobi Zonal Council and the Dome Zonal Council.

### **1.2 Physical Features**

#### **1.2.1 Climate and vegetation**

The Municipal falls in the savannah ecological zone. Rainfall pattern is bi-modal with the average annual temperature ranging between 25.1°C in August and 28.4°C in February and March. February and March are normally the hottest months. The Municipal has two main vegetation namely shrub lands and grassland. The shrub lands occur mostly in the western outskirts and in the north towards the Aburi hills and consist of dense clusters of small trees and shrubs that grow to an average height of about five meters. The grassland, which is located to the southern parts of the Municipal, has now been encroached upon by human activities including settlements. Figure 1.1 is the Political Administrative map of the Municipality.

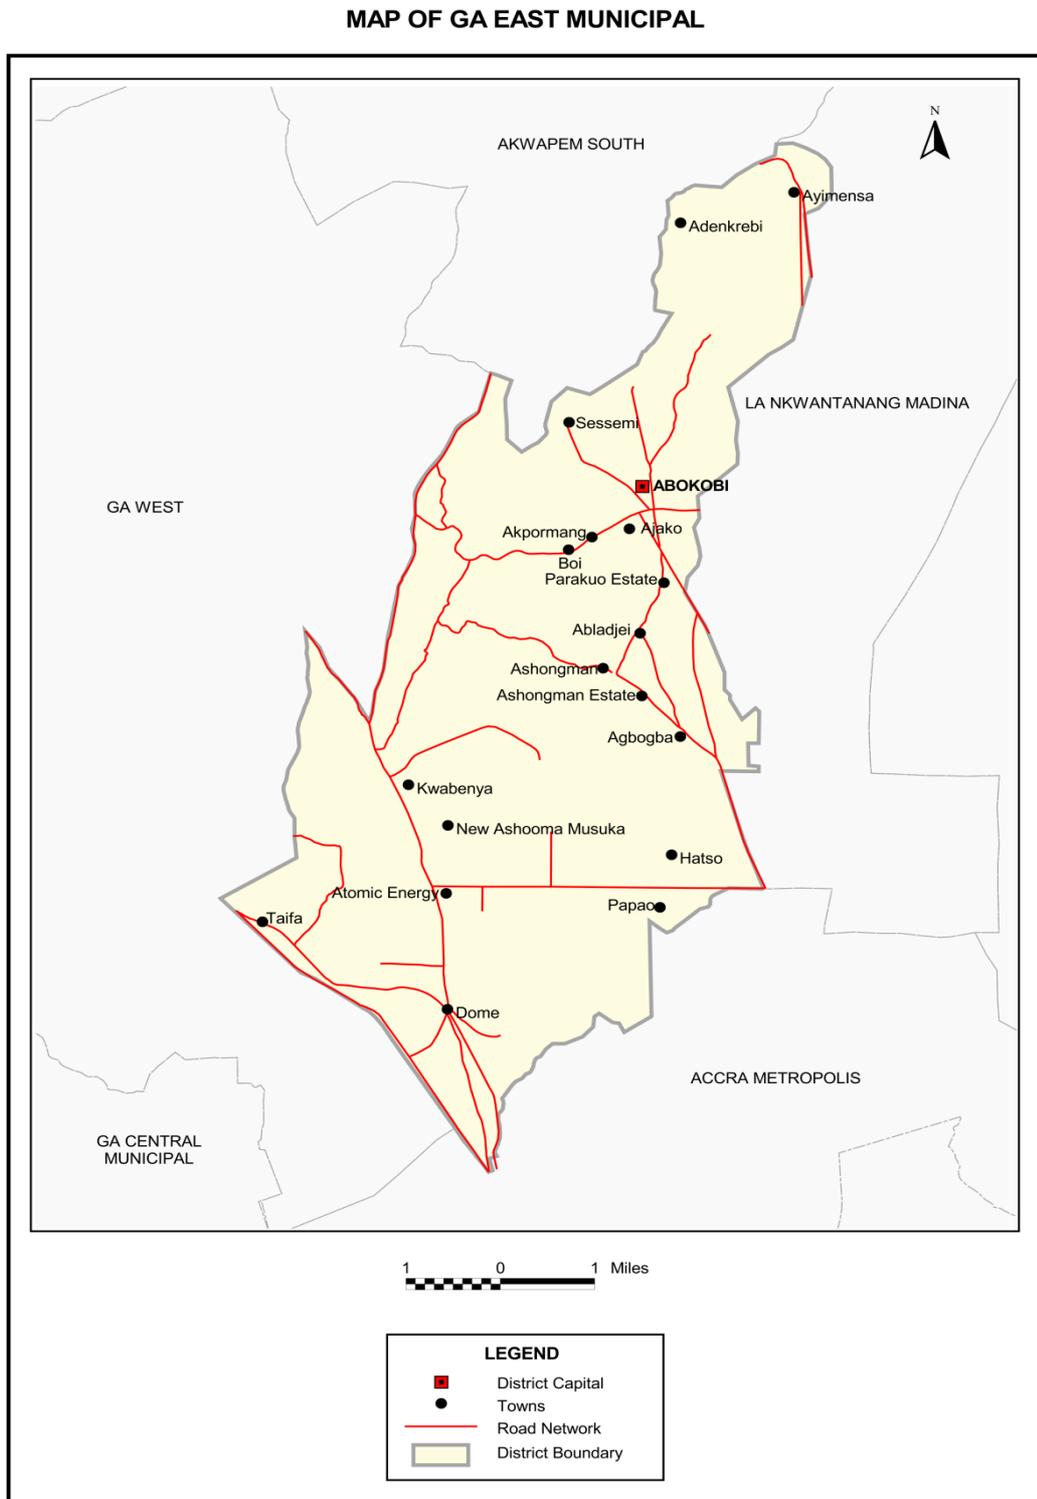

#### **1.2.2 Relief and drainage**

The land area consists of gentle sloped landscape interspersed with plains in the west. The Akwapim range rises steeply above the western end and lies generally at 375 - 420 meters north of Aburi in the Akwapim South District and fall to 300 meters southward in the Okaikwee North District. There are a few rivers and seasonal streams most of which are threatened by human activities. They include the Sesemi stream at Sesemi and the Dakubi stream at Ajako. Other small ponds exist at Abloradjei, Sesemi, and Old Ashongman. Most of these ponds are also threatened by human activities and the Assembly has to make conscious efforts to preserve them for agricultural use. The Municipal also has a lot of underground water some of which have been tapped to provide potable water for small towns and communities in the Municipality.

#### **1.2.3 Soil and agricultural land use**

The soil types that exist in the Municipal include but not limited to the following. They are fete consociation located at Abokobi, Adenkrabi and Akporman. It is very shallow and excessively well drained, pale coloured sandy loam and contains small pieces of rock on steep slopes. Nyigbenya, Haatso Complex Association is located at Agbogba, Haatso, Kwabenya, Taifa and Dome. It is well drained red, sandy clay loam to clay with abundant rough stone and quartz gravel. This soil types are suitable for permanent forest. However, Danfa-Dome association and Fete Bediesi complex association located at Danfa to Dome and Sesemi respectively are good for rice, sugarcane vegetables and cotton production. The rest are maize, yam cowpea, soya bean, cassava and others.

**Figure 1.1: Map of Ga East Municipal**

Source: Ghana Statistical Service, GIS

#### **1.2.4 Land tenure system**

Chiefs, as well as clan and family heads own the land in the Municipality, and they hold the land in trust for their subjects. The land could be acquired through direct purchase, rented, leasehold and sharecropping. The fact that these parcels of land could be inherited through parents or grandparents has led to a lot of sale and resale of land with its attendant land litigations and chieftaincy disputes. This situation has also contributed to the rapid loss of farmlands with its attendant unemployment and migration especially the youth to adjoining districts such as the Tema Metropolitan Assembly (TMA) and Accra Metropolitan Assembly (AMA).

### **1.3 Political and Administrative Structure**

The Ga East Municipal Assembly was carved out of the then Ga District and was established in 2004 by an Act of Parliament (Legislative Instrument 1864) as a district. It was elevated to a Municipality in 2007 through LI 2061. It has deliberative, legislative and executive powers. In July 2012, the Municipality was split into two, thus Ga East and La-Nkwantanang Madina Municipalities by LI 2136. It is the highest political authority in the municipality vested with the powers to deliberate, legislate, plan and develop the entire municipality through the preparation and effective implementation of development plans and budgets. Act 480 of 1994 establishing the National Development Planning System entreats the Municipal Assembly to formulate programmes, strategies and projects and to see to their implementation, monitoring and evaluation using available resources. The Assembly can be compared to parliament as a legislative body making byelaws for the Municipality.

#### **1.3.1 Structure of the assembly**

The Municipality consists of ten (10) electoral areas and it is represented in the general Assembly by elected and appointed Assembly members. The composition of the Assembly is made up of 10 elected members, 4 appointed members, the Member of Parliament representing Abokobi and Dome-Kwabinya constituency and the Municipal Chief Executive. The General Assembly is therefore made up of 16 members. The 10 electoral areas are as follows: Taifa South, Taifa North, Abokobi, Agbogba, Kwabinya, Haatso, Atomic, Dome East, Dome west and Abladjei.

An elected Presiding Member is the head of the General Assembly with the Municipal Coordinating Director as the Secretary. To enable the Assembly perform its function of overall development of the municipality the following sub-committees and decentralized departments have been established. The sub-committees include Development Planning Sub-committee, Finance and Administration Sub-committee, Justice and Security Sub-committee, Works Sub-Committee and Social Services Sub-committee.

### **1.4 Social Structure**

The Municipality has about 52 settlements with about 82 percent of the population living in urban areas. The remaining 18 percent occupies the rural areas. The Municipal capital, Abokobi, is approximately 29 kilometers from the country's capital city Accra. The municipality's large towns include Haatso, Dome, Taifa and Kwabinya. The other small towns in the Municipality are linked to the trunk road via feeder roads. Dome is the largest and the highest ranked community with most basic facilities and services. It functions as a commercial centre because of its threshold population that can support almost all economic activities.

Dome and Kwabenya are the largest settlements with most facilities including residential. The second largest settlements include Taifa, Haatso and Abokobi the district capital. The third largest settlements include Papao, Kweiman, Boi and New Ashongman and Musuko. It is worth noting that even though New Ashongman is a peri-urban area, the community lacks most facilities. Most of the larger settlements are located in the southern sector of the Municipality that is adjacent to the Accra Metropolitan Area.

#### **1.4.1 Ethnicity and chieftaincy**

Almost all the ethnic groups in Ghana exist in the district although Akans seem to have a slight majority over Gas and Ewes in that order. Others are Dangbes and the Gurs. This situation is especially true for areas like Dome, Taifa and other urban communities. In the rural and peri-urban communities like Abokobi, however, the Gas form an overwhelming majority though other ethnic groups continue to reside amongst them. Though the Municipality has an Islamic presence especially in and around Abogba, Christianity remains the most dominant form of religion for the people of the district. Pockets of people however maintain they are traditionalists and Krishna, whilst others profess no religion at all.

At the community level, authority is vested in traditional rulers and their elders or sub chiefs. The traditional chiefs continue to wield some amount of power hence their contribution to, and influence in the decision making process cannot be under estimated. Unfortunately however, their ability to organize and rally their people to support development programmes is being threatened by their involvement in various chieftaincy disputes and land litigations. The flash points for disputes in the district include Boi and Akporman to mention a few.

#### **1.4.2 Water and sanitation**

Potable water supply in the urban/peri-urban areas of the municipality has been a major challenge to the Assembly, especially when the Assembly has no direct control over urban water supply. Areas like Dome, Taifa, Agbogba, Ashongman and Musuko have limited access to pipe-borne water. Others depend on tanker services and a few hand-dug wells. In general therefore, the price of water is fairly high in these urban communities. The situation is further worsened due to the steadily increasing population through the influx of skilled and unskilled labour from the rural areas. To improve this situation the Municipal Assembly will have to support and facilitate government strategies to accelerate the provision of safe water in the urban areas, especially the inclusion of rain water facilities when building.

In the peri-urban areas and small towns however, the Municipal Assembly is responsible for water supply. The Assembly is currently managing two small towns' piped schemes through Water and Sanitation Development Boards (WSDB). These are Abokobi-Oyarifa-Teiman-Sesemi scheme and the Pantang Area Pipe scheme. The two schemes cover 15 communities. This places an obligation on the Municipality to ensure that the facilities are managed in a sustainable manner.

The rate of waste generation and management in the Municipality is a matter of concern. With the increasing influx of people and the rapid urbanization, huge amounts of human and industrial waste are generated at an alarming rate. It is estimated that about 385 tons of solid waste is generated monthly out of which 261 tons are collected which represents 67 percent. This leaves a substantial amount of backlog that creates various kinds of inconveniences including health hazard to people in the Municipality. Out of the 261 tons collected the private sector collects about 81 percent through door-to-door collection.

Apart from the door-to-door collection, wastes are collected in containers placed at vantage points by the Assembly. The absence of properly engineered final disposal site is a major constraint.

### **1.4.3 Housing and development control**

Access to adequate housing is an important ingredient in the Municipality's efforts to improve the livelihood and environmental sanitation of the people living in the Municipality. The lack of sufficient housing units, especially in the urban areas of the Municipality has among other things contributed to overcrowding, development of illegal structures, conversion of commercial facilities to residential use, streetism and pressure on social facilities and amenities. This has resulted in the development of slums in areas like Dome, Taifa, Kwabenya and Haatso.

The result of these is the creation of an insanitary environment with no drains and properly demarcated sanitary sites. Waste is therefore disposed off indiscriminately and liquid waste flows freely on the already poorly demarcated streets.

### **1.4.4 Education**

The distribution of schools in the Municipality is quite even. There are six (6) privately owned Senior High Schools, which include Perfect Senior High School, The Masters School and Maxvic School, Dard Senior High School, Oxbert Senior High School and Christ International Senior High School. The Municipality, however, is yet to have a public Senior High School of its own. There are 31 public Basic Schools made up of Kindergarten, Primary and Junior High Schools and a 109 private schools that are sited mainly in the peri-urban areas of the Municipality. Most of the schools lack libraries, ICT resource centres and recreational grounds. It is home to the University of Allied Science that has trained many high and low level manpower management human resource needs of the Municipality. It is also home to the Ghana Atomic Energy School and Research, which has done a lot of research in to energy. From the Early Childhood to the Senior High School (SHS) level, the private sector owned more than two third of the schools.

Not surprising though, pupils in private schools have relatively better infrastructure than their public school counterparts in the Municipality. The problems of inadequate and poor quality infrastructure in the public schools can be found throughout the Municipality.

Overcrowding with an average of about 120 pupils in a class has compounded the problems in the public schools in the urban areas of the Municipality including Dome, Haatso, Taifa and Kwabenya. This means the numbers of pupils exceed the number of classrooms and therefore the children are overcrowded. This situation is affecting the quality of education and increasing concerns about the competence and image of our public schools. Unlike the situation in the urban and peri-urban areas enrolment is low in the rural areas especially Adenkrebi. The same trend applies to staffing.

The introduction of the Capitation Grant and the School Feeding Programme has increased enrolment in the 20 participating schools. Adenkrebi, one of the rural communities however need serious attention to improve enrolment.

### **1.4.5 Health service delivery**

The Ga East Municipal Health Management Team (MHMT) is responsible for all health service delivery in the entire Municipality. The Municipality is divided into four sub

municipals for the organization and distribution of primary health care services. These sub municipals include Abokobi, Dome, Taifa and Haatso. Each sub municipal health management team has the responsibility for the delivery of health services to the population of their defined areas, and has either one or two community clinics. There are trained TBAs and other care providers such as chemical shop dealers, maternity homes, traditional healers etc. in the municipality. The doctor to population and nurse to population ratios in the metropolis are 40,246:1 and 2,012:1 respectively.

Malaria continues to be the major cause of Out Patients Department (OPD) attendance. It accounts for about 40.8 percent of morbidity. Frequent outbreaks of cholera in the Municipality are also of great concern. Sporadic cases have also been recorded in other parts of the Municipality. Poor environmental sanitation is a major contributory factor.

## **1.5 Economy and Living Conditions**

The economic importance of the Ga East Municipal to the development of the country cannot be over emphasized. This is due to the enabling factors for development coupled with the infrastructure set-up and the district's proximity to the nation's capital, Accra. There are four main economic activities in the Municipality, which are agriculture, industry, service and commerce.

### **1.5.1 Agricultural sector**

Farming is the major economic activity for about 55 percent of the economically active population. About 70 percent of the rural population depends on agriculture as their main source of livelihood with about 95 percent of them being small holders. The major agricultural activities are crop production and livestock production. Among the wide range of vegetables produced are pepper, tomatoes, cabbage, okra and garden eggs. Livestock production has a very good potential and the district is encouraging it. There are a number of poultry farmers in and around Abokobi, the Municipal capital. The major one is the Abokobi Agriculture Project.

Other livestock production includes the rearing of turkeys and cattle even though not on a very large scale like poultry. About seven (7) farmers are known in the district to be rearing rabbits and are located in Akporman, Boi, Ashongman and Abokobi.

The production of cash crops like maize, cowpea and cassava are also very encouraging. The women in the rural communities mostly farm and process cassava into Gari and Cassava dough and this is predominant in Dravaga. This situation provides an enabling environment for the various agro-based modules selected for implementation under the youth employment programme in the Municipality.

### **1.5.2 Agro-processing**

There are quite a number of agro-processing companies in the Municipality. Most of them are engaged in the bagging and packaging of yams and are located at Agbogba. The goods after packaging are then exported. The packaging is done on large-scale basis. Pineapples are also processed into fruit juice and sent to the local market. It is however worthy of note that the main raw material, which is pineapples, are not produced in the district but are brought from Nsawam and its surrounding communities.

### **1.5.3 Feed mill**

The Municipality is well known for its poultry production and to complement this economic activity is the production of poultry and pig feed. The major centre where feed mills are located is Abokobi, which is the capital of the Municipality.

### **1.5.4 Industrial sector**

The industrial sector can boast of a number of industrial establishments particularly in the Dome area, such as Phyto Riker (GIHOC) Pharmaceuticals and Royal Aluminum Company among others.

### **1.5.5 Banks and commerce**

The service sector appears to be one of the fastest developing sectors of the local economy. Banking services provided by the Ghana Commercial Bank and the Ecobank Limited which are some of the largest banks operating in the municipality. The Abokobi Area Rural Bank is performing very well and has agencies at Dome and Madina. An agency of the Shai Rural Bank, Pro-Credit Limited and La Community Bank are also located in the Municipality.

### **1.5.6 Markets**

The Assembly's traditional market pattern has been towards the south in Dome, Haatso and Taifa through to the central business city of Accra. The rural areas to the north have no well-established markets. Dome is the major market center in the district with Haatso and Taifa playing complementary roles. Dome is a fast growing market, which provides services to traders in and around the area. Haatso however has the potential of rivaling Dome in terms of provision of these services. Dome market functions daily, with Tuesdays and Saturdays serving as the main market days. Items traded in these markets include perishables and non-perishables like manufactured commodities, imported goods like cloth, utensils and a variety of spare parts. Other goods are cereals, livestock and second hand clothing.

The strategic location of these markets coupled with good accessibility has facilitated their growth leading to congestion and spill-offs onto the nearby roads. There are however some uncompleted market facilities at Haatso and Taifa. These markets need to be completed to facilitate the decongestion of the Dome market. It is important therefore to improve infrastructure facilities in the Dome market.

### **1.5.7 Tourism and hospitality**

Even though tourism has become one of the main sources of income and employment generation in the country, the Municipal Assembly is yet to tap the existing potentials. There are a number of tourist sites that have the potential of rivaling some of the well-known tourist sites in the country. Though largely undeveloped, these sites hold the key to the area's development if steps are taken to explore the large potential they present.

The development of the site would however be capital intensive and therefore the Assembly would have to lobby investors and donors as well as the Ministry of Tourism to facilitate its development. Other sites that need attention include the African Village near Sesemi, the historical origin of the headquarters, Abokobi as a settlement for Presbyterian missionaries and their cemetery. Besides these, potentials exist for ecotourism. The reconstructed Royal Danish Plantation Frederik's grave (Danish Slave Fort) built in 1832 by King Frederik VI at Sesemi, is currently being visited by a few people.

The Assembly in collaboration with the people of Sesemi and the Department of Archaeology, University of Ghana would have to market the centre to attract tourists.

The Augustinus Fund funded the reconstruction with technical support from the Department of Archaeology, Legon as well as Architects from the national museums in Ghana and Denmark. The Assembly should support the development and marketing of its tourist sites to attract tourists and also serve as a source of employment to the youth in the communities and the municipality at large.

The Abokobi Presbyterian Women's Center provides one of the excellent conference facilities in the district which investors and conference organizers can take advantage of to organize their conferences, meetings and other social events. There are also hotels like Royal Gateway Hotel, BriHiny Guest House, Loving Blue Hotel and Tosway Hotel among others, which can cater for all the accommodation needs of visitors to the district.

### **1.5.8 Construction sector**

The construction sector (estate development) is also fast growing. With the enormous deposits of natural building materials of high quality coupled with large tracts of undeveloped lands especially in the peri-urban areas, the Municipality has become a favourite area for estate development and the supply of sand, stone and latrite which are won indiscriminately all year round especially around Kwabenya. Currently very wide ranges of housing units are being developed in Ashongman and Abokobi areas.

To preserve some of the agricultural farmlands, the Assembly will have to create land banks in selected areas, which will include Abokobi and other areas. This will then be given out to farmers to ensure food security and generate income to reduce poverty. The impact on the environment as a result of the activities of these estate developers and construction firms needs to be critically assessed and sustainable interventions developed to mitigate the effect on the environment.

### **1.5.9 Roads and transport**

Road is the main form of transport in the municipality. This implies that, the overall improvement of the road network, maintenance and rehabilitation will facilitate and lower transportation cost and integrates the municipality's rural economy with the urban economy to reduce poverty. In general, the road network in the municipality can be described as fairly good. The total length of paved and unpaved road in the municipality is 561 kilometers. The paved roads, which comprises Asphalt and surface treatment is about 108 kilometers. This notwithstanding, there are specific areas that need urgent attention to reduce travel time. These include areas in Dome, Haatso, Taifa, New Ashongman, West Lands, Kwabenya, Musuko and Adenkrabi. Culverts, drains and speed humps will also have to be provided in various communities to ensure linkages and easy access. Also, roads linking Abokobi and its surrounding areas need to be considered. Adenkrebi is almost isolated from the Municipality due to poor accessibility. A road to link Adenkrabi to Teiman or Ayimensa should seriously be considered.

## **1.6 Census Methodology, Concepts and Definitions**

### **1.6.1 Introduction**

The Ghana Statistical Service (GSS) was guided by the principle of international comparability and the need to obtain accurate information in the 2010 Population and

Housing Census (2010 PHC). The Census was, therefore, conducted using all the essential features of a modern census as contained in the United Nations Principles and Recommendations for countries taking part in the 2010 Round of Population and Housing Censuses.

Experience from previous post independence censuses of Ghana (1960, 1970, 1984 and 2000) was taken into consideration in developing the methodologies for conducting the 2010 PHC. The primary objective of the 2010 PHC was to provide information on the number, distribution and social, economic and demographic characteristics of the population of Ghana necessary to facilitate the socio-economic development of the country.

### **1.6.2 Pre-enumeration activities**

#### **Development of census project document and work plans**

A large-scale statistical operation, such as the 2010 PHC required meticulous planning for its successful implementation. A working group of the Ghana Statistical Service prepared the census project document with the assistance of two consultants. The document contains the rationale and objectives of the census, census organisation, a work plan as well as a budget. The project document was launched in November 2008 as part of the Ghana Statistics Development Plan (GSDP) and reviewed in November 2009.

#### **Census secretariat and committees**

A well-structured management and supervisory framework that outlines the responsibilities of the various stakeholders is essential for the effective implementation of a population and housing census. To implement the 2010 PHC, a National Census Secretariat was set up in January 2008 and comprised professional and technical staff of the GSS as well as staff of other Ministries, Departments and Agencies (MDAs) seconded to the GSS. The Census Secretariat was primarily responsible for the day-to-day planning and implementation of the census activities. The Secretariat had seven units, namely; census administration, cartography, recruitment and training, publicity and education, field operations and logistics management, data processing, and data analysis and dissemination.

The Census Secretariat was initially headed by an acting Census Coordinator engaged by the United Nations Population Fund (UNFPA) in 2008 to support the GSS in the planning of the Census. In 2009, the Census Secretariat was re-organised with the Government Statistician as the National Chief Census Officer and overall Coordinator, assisted by a Census Management Team and a Census Coordinating Team. The Census Management Team had oversight responsibility for the implementation of the Census. It also had the responsibility of taking critical decisions on the census in consultation with other national committees. The Census Coordinating Team, on the other hand, was responsible for the day-to-day implementation of the Census programme.

A number of census committees were also set up at both national and sub-national levels to provide guidance and assistance with respect to resource mobilization and technical advice. At the national level, the committees were the National Census Steering Committee (NCSC), the National Census Technical Advisory Committee (NCTAC) and the National Census Publicity and Education Committee (NCPEC). At the regional and district levels, the committees were the Regional Census Implementation Committee and the District Census Implementation Committee, respectively.

The Regional and District Census Implementation Committees were inter-sectoral in their composition. Members of the Committees were mainly from decentralized departments with the Regional and District Coordinating Directors chairing the Regional Census Implementation Committee and District Census Implementation Committee, respectively. The Committees contributed to the planning of district, community and locality level activities in areas of publicity and field operations. They supported the Regional and District Census Officers in the recruitment and training of field personnel (enumerators and supervisors), as well as mobilizing logistical support for the census.

### **Selection of census topics**

The topics selected for the 2010 PHC were based on recommendations contained in the UN Principles and Recommendations for 2010 Round of Population and Housing Censuses and the African Addendum to that document as well as the needs of data users. All the core topics recommended at the global level, i.e., geographical and internal migration characteristics, international migration, household characteristics, demographic and social characteristics such as age, date of birth, sex, and marital status, fertility and mortality, educational and economic characteristics, issues relating to disability and housing conditions and amenities were included in the census.

Some topics that were not considered core by the UN recommendations but which were found to be of great interest and importance to Ghana and were, therefore, included in the 2010 PHC are religion, ethnicity, employment sector and place of work, agricultural activity, as well as housing topics, such as, type of dwelling, materials for outer wall, floor and roof, tenure/holding arrangement, number of sleeping rooms, cooking fuel, cooking space and Information Communication Technology (ICT).

### **Census mapping**

A timely and well-implemented census mapping is pivotal to the success of any population and housing census. Mapping delineates the country into enumeration areas to facilitate smooth enumeration of the population. The updating of the 2000 Census Enumeration Area (EA) maps started in the last quarter of 2007 with the acquisition of topographic sheets of all indices from the Survey and Mapping Division of the Lands Commission. In addition, digital sheets were also procured for the Geographical Information System Unit.

The Cartography Unit of the Census Secretariat collaborated with the Survey and Mapping Division of the Lands Commission and the Centre for Remote Sensing and Geographic Information Services (CERSGIS) of the Department of Geography and Resource Development, University of Ghana, to determine the viability of migrating from analog to digital mapping for the 2010 PHC, as recommended in the 2000 PHC Administrative Report. Field cartographic work started in March 2008 and was completed in February 2010.

### **Development of questionnaire and manuals**

For effective data collection, there is the need to design appropriate documents to solicit the required information from respondents. GSS consulted widely with main data users in the process of the questionnaire development. Data users including MDAs, research institutions, civil society organisations and development partners were given the opportunity to indicate the type of questions they wanted to be included in the census questionnaire.

Documents developed for the census included the questionnaire and manuals, and field operation documents. The field operation documents included Enumerator's Visitation

Record Book, Supervisor's Record Book, and other operational control forms. These record books served as operational and quality control tools to assist enumerators and supervisors to control and monitor their field duties respectively.

### **Pre-tests and trial census**

It is internationally recognized that an essential element in census planning is the pre-testing of the questionnaire and related instructions. The objective of the pre-test is to test the questionnaire, the definition of its concepts and the instructions for filling out the questionnaire.

The census questionnaire was pre-tested twice in the course of its development. The first pre-test was carried out in March 2009 to find out the suitability of the questions and the instructions provided. It also tested the adequacy and completeness of the responses and how respondents understood the questions. The second pre-test was done in 10 selected enumeration areas in August 2009. The objective of the second pre-test was to examine the sequence of the questions, test the new questions, such as, date of birth and migration, and assess how the introduction of 'date of birth' could help to reduce 'age heaping'. With regard to questions on fertility, the pre-tests sought to find out the difference, if any, between proxy responses and responses by the respondents themselves. Both pre-tests were carried in the Greater Accra Region. Experience from the pre-tests was used to improve the final census questionnaire.

A trial census, which is a dress rehearsal of all the activities and procedures that are planned for the main census was carried out in October/November 2009. These included recruitment and training, distribution of census materials, administration of the questionnaire and other census forms, enumeration of the various categories of the population (household, institutional and floating population), and data processing. The trial census was held in six selected districts across the country namely; Saboba (Northern Region), Chereponi (Northern Region), Sene (Brong Ahafo Region), Bia (Western Region), Awutu Senya (Central Region), and Osu Klottey Sub-Metro (Greater Accra Region). A number of factors were considered in selecting the trial census districts. These included: administrative boundary issues, ecological zone, and accessibility, enumeration of floating population/outdoor-sleepers, fast growing areas, institutional population, and enumeration areas with scattered settlements.

The trial census provided the GSS with an opportunity to assess its plans and procedures as well as the state of preparedness for the conduct of the 2010 PHC. The common errors found during editing of the completed questionnaires resulted in modifications to the census questionnaire, enumerator manuals and other documents. The results of the trial census assisted the GSS to arrive at technically sound decisions on the ideal number of persons per questionnaire, number of persons in the household roster, migration questions, placement of the mortality question, serial numbering of houses/housing structures and method of collection of information on community facilities. Lessons learnt from the trial census also guided the planning of the recruitment process, the procedures for training of census field staff and the publicity and education interventions.

### **1.6.3 Census enumeration**

#### **Method of enumeration and fieldwork**

All post- independence censuses (1960, 1970, 1984, and 2000) conducted in Ghana used the de facto method of enumeration where people are enumerated at where they were on census

night and not where they usually reside. The same method was adopted for the 2010 PHC. The de facto count is preferred because it provides a simple and straightforward way of counting the population since it is based on a physical fact of presence and can hardly be misinterpreted. It is thought that the method also minimizes the risks of under-enumeration and over enumeration. The canvasser method, which involves trained field personnel visiting houses and households identified in their respective enumeration areas, was adopted for the 2010 PHC.

The main census enumeration involved the canvassing of all categories of the population by trained enumerators, using questionnaires prepared and tested during the pre-enumeration phase. Specific arrangements were made for the coverage of special population groups, such as the homeless and the floating population. The fieldwork began on 21st September 2010 with the identification of EA boundaries, listing of structures, enumeration of institutional population and floating population.

The field personnel used the week preceding the Census Night to list houses and other structures in their enumeration areas. Enumerators were also mobilized to enumerate residents/inmates of institutions, such as, schools and prisons. They returned to the institutions during the enumeration period to reconcile the information they obtained from individuals and also to cross out names of those who were absent from the institutions on Census Night. Out-door sleepers (floating population) were also enumerated on the Census Night.

Enumeration of the household population started on Monday, 27<sup>th</sup> September 2010. Enumerators visited houses, compounds and structures in their enumeration areas and started enumerating all households including visitors who spent the Census Night in the households. Enumeration was carried out in the order in which houses/structures were listed and where the members of the household were absent, the enumerator left a call-back-card indicating when he/she would come back to enumerate the household. The enumeration process took off smoothly with enumerators poised on completing their assignments on schedule since many of them were teachers and had to return to school. However, many enumerators ran short of questionnaires after a few days' work.

Enumeration resumed in all districts when the questionnaire shortage was resolved and by 17<sup>th</sup> October 2010, enumeration was completed in most districts. Enumerators who had finished their work were mobilized to assist in the enumeration of localities that were yet to be enumerated in some regional capitals and other fast growing areas. Flooded areas and other inaccessible localities were also enumerated after the end of the official enumeration period. Because some enumeration areas in fast growing cities and towns, such as, Accra Metropolitan Area, Kumasi, Kasafo and Techiman were not properly demarcated and some were characterized by large EAs, some enumerators were unable to complete their assigned tasks within the stipulated time.

#### **1.6.4 Post enumeration survey**

In line with United Nations recommendations, the GSS conducted a Post Enumeration Survey (PES) in April 2011 to check content and coverage error. The PES was also to serve as an important tool in providing feedback regarding operational matters such as concepts and procedures in order to help improve future census operations. The PES field work was carried out for 21 days in April 2011 and was closely monitored and supervised to ensure quality output. The main findings of the PES were that:

- 97.0 percent of all household residents who were in the country on Census Night (26<sup>th</sup> September, 2010) were enumerated.
- 1.3 percent of the population was erroneously included in the census.
- Regional differentials were observed. Upper East region recorded the highest coverage rate of 98.2 percent while the Volta region had the lowest coverage rate of 95.7 percent.
- Males (3.3 percent) were more likely than females (2.8%) to be omitted in the census. The coverage rate for males was 96.7 percent and the coverage rate for females was 97.2 percent. Also, the coverage rates (94.1 percent) for those within the 20-29 and 30-39 age groups were relatively lower compared to the coverage rates of the other age groups.
- There was a high rate of agreement between the 2010 PHC data and the PES data for sex (98.8%), marital status (94.6%), relationship to head of household (90.5%) and age (83.0%).

### **1.6.5 Release and dissemination of results**

The provisional results of the census were released in February 2011 and the final results in May 2012. A National Analytical report, six thematic reports, a Census Atlas, 10 Regional Reports and a report on Demographic, Social, Economic and Housing were prepared and disseminated in 2013.

### **1.6.6 Concepts and definitions**

#### **Introduction**

The 2010 PHC of Ghana followed the essential concepts and definitions of a modern Population and Housing Census as recommended by the United Nations (UN). It is important that the concepts, definitions and recommendations are adhered to since they form the basis upon which Ghana could compare her data with that of other countries.

The concepts and definitions in this report cover all sections of the 2010 Population and Housing Census questionnaires (PHC1A and PHC1B). The sections were: geographical location of the population, Household and Non-household population, Literacy and Education, Emigration, Demographic and Economic Characteristics, Disability, Information Communication Technology (ICT), Fertility, Mortality, Agricultural Activity and Housing Conditions.

The concepts and definitions are provided to facilitate understanding and use of the data presented in this report. Users are therefore advised to use the results of the census within the context of these concepts and definitions.

#### **Region**

There were ten (10) administrative regions in Ghana during the 2010 Population and Housing Census as they were in 1984 and 2000.

#### **District**

In 1988, Ghana changed from the local authority system of administration to the district assembly system. In that year, the then existing 140 local authorities were demarcated into

110 districts. In 2004, 28 new districts were created; this increased the number of districts in the country to 138. In 2008, 32 additional districts were created bringing the total number of districts to 170. The 2010 PHC was conducted in these 170 administrative districts (these are made-up of 164 districts/municipals and 6 metropolitan areas). In 2012, 46 new districts were created to bring the total number of districts to 216. There was an urgent need for data for the 46 newly created districts for planning and decision-making. To meet this demand, the 2010 Census data was re-programmed into 216 districts after carrying out additional fieldwork and consultations with stakeholders in the districts affected by the creation of the new districts.

### **Locality**

A locality was defined as a distinct population cluster (also designated as inhabited place, populated centre, settlement), which has a NAME or LOCALLY RECOGNISED STATUS. It included fishing hamlets, mining camps, ranches, farms, market towns, villages, towns, cities and many other types of population clusters, which meet the above criteria. There were two main types of localities, rural and urban. As in previous censuses, the classification of localities into 'urban' and 'rural' was based on population size. Localities with 5,000 or more persons were classified as urban while localities with less than 5,000 persons were classified as rural.

### **Population**

The 2010 Census was a "de facto" count and each person present in Ghana, irrespective of nationality, was enumerated at the place where he/she spent the midnight of 26th September 2010.

### **Household**

A household was defined as a person or a group of persons, who lived together in the same house or compound and shared the same housekeeping arrangements. In general, a household consisted of a man, his wife, children and some other relatives or a house help who may be living with them. However, it is important to remember that members of a household are not necessarily related (by blood or marriage) because non-relatives (e.g. house helps) may form part of a household.

### **Head of household**

The household head was defined as a male or female member of the household recognised as such by the other household members. The head of household is generally the person who has economic and social responsibility for the household. All relationships are defined with reference to the head.

### **Household and Non-household population**

Household population comprised of all persons who spent the census night in a household setting. All persons who did not spend the census night in a household setting (except otherwise stated) were classified as non-household population. Persons who spent census night in any of the under listed institutions and locations were classified as non-household population:

- (a) Educational Institutions
- (b) Children's and Old People's Homes

- (c) Hospitals and Healing Centres
- (d) Hotels
- (e) Prisons
- (f) Service Barracks
- (g) Soldiers on field exercise
- (h) Floating Population: The following are examples of persons in this category:
  - i. All persons who slept in lorry parks, markets, in front of stores and offices, public bathrooms, petrol filling stations, railway stations, verandas, pavements, and all such places which are not houses or compounds.
  - ii. Hunting and fishing camps.
  - iii. Beggars and vagrants (mentally sick or otherwise).

### **Age**

The age of every person was recorded in completed years disregarding fractions of days and months. For those persons who did not know their birthdays, the enumerator estimated their ages using a list of district, regional and national historical events.

### **Nationality**

Nationality is defined as the country to which a person belongs. A distinction is made between Ghanaians and other nationals. Ghanaian nationals are grouped into Ghanaian by birth, Ghanaian with dual nationality and Ghanaian by naturalization. Other nationals are grouped into ECOWAS nationals, Africans other than ECOWAS nationals, and non-Africans.

### **Ethnicity**

Ethnicity refers to the ethnic group that a person belonged to. This information is collected only from Ghanaians by birth and Ghanaians with dual nationality. The classification of ethnic groups in Ghana is that officially provided by the Bureau of Ghana Languages and which has been in use since the 1960 census.

### **Birthplace**

The birthplace of a person refers to the locality of usual residence of the mother at the time of birth. If after delivery a mother stayed outside her locality of usual residence for six months or more or had the intention of staying in the new place for six or more months, then the actual town/village of physical birth becomes the birthplace of the child.

### **Duration of residence**

Duration of residence refers to the number of years a person has lived in a particular place. This question is only asked of persons not born in the place where enumeration took place. Breaks in duration of residence lasting less than 12 months are disregarded. The duration of residence of persons who made multiple movements of one (1) year or more is assumed to be the number of years lived in the locality (town or village) since the last movement.

## **Religion**

Religion refers to the individual's religious affiliation as reported by the respondent, irrespective of the religion of the household head or the head's spouse or the name of the person. No attempt was made to find out if respondents actually practiced the faith they professed.

## **Marital status**

Marital status refers to the respondent's marital status as at Census Night. The question on marital status was asked only of persons 12 years and older. The selection of the age limit of 12 years was based on the average age at menarche and also on the practice in some parts of the country where girls as young as 12 years old could be given in marriage.

## **Literacy**

The question on literacy referred to the respondent's ability to read and write in any language. A person was considered literate if he/she could read and write a simple statement with understanding. The question on literacy was asked only of persons 11 years and older.

## **Education**

### ***School attendance***

Data was collected on school attendance for all persons three (3) years and older. School attendance refers to whether a person has ever attended, was currently attending or has never attended school. In the census, school meant an educational institution where a person received at least four hours of formal education.

Although the lower age limit of formal education is six years for primary one, eligibility for the school attendance question was lowered to three years because pre-school education has become an important phenomenon in the country.

### ***Level of education***

Level of education refers to the highest level of formal school that a person ever attended or was attending. This information was obtained for persons 3 years and older.

## **Activity status**

preceding census night. Information on type of activity was collected on persons 5 years and older. A person was regarded as economically active if he/she:

- a) Worked for pay or profit or family gain for at least 1 hour within the 7 days preceding Census Night. This included persons who were in paid employment or self-employment or contributing family workers.
- b) Did not work, but had jobs to return to.
- c) Were unemployed.

The economically not active were persons who did not work and were not seeking for work. They were classified by reasons for not being economically active. Economically not active persons included homemakers, students, retired persons, the disabled and persons who were unable to work due to their age or ill-health.

## **Occupation**

This referred to the type of work the person was engaged in at the establishment where he/she worked. This was asked only of persons 5 years and older who worked 7 days before the census night, and those who did not work but had a job to return to as well as those unemployed who had worked before. All persons who worked during the 7 days before the census night were classified by the kind of work they were engaged in. The emphasis was on the work the person did during the reference period and not what he/she was trained to do. For those who did not work but had a job to return to, their occupation was the job they would go back to after the period of absence. Also, for persons who had worked before and were seeking for work and available for work, their occupation was on the last work they did before becoming unemployed. If a person was engaged in more than one occupation, only the main one was considered.

## **Industry**

Industry referred to the type of product produced or service rendered at the respondent's work place. Information was collected only on the main product produced or service rendered in the establishment during the reference period.

## **Employment status**

Employment status refers to the status of a person in the establishment where he/she currently works or previously worked. Eight employment status categories were provided: employee, self-employed without employees, self-employed with employees, casual worker, contributing family worker, apprentice, domestic employee (house help). Persons who could not be classified under any of the above categories were classified as "other".

## **Employment sector**

This refers to the sector in which a person worked. The employment sectors covered in the census were public, private formal, private informal, semi-public/parastatal, NGOs and international organizations.

## **Disability**

Persons with disability were defined as those who were unable to or were restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation. Information was collected on persons with visual/sight impairment, hearing impairment, mental retardation, emotional or behavioural disorders and other physical challenges.

## **Information communication technology (ICT)**

ICT questions were asked for both individuals and households. Persons having mobile phones refer to respondents 12 years and older who owned mobile phones (irrespective of the number of mobile phones owned by each person). Persons using Internet facility refers to those who had access to Internet facility at home, Internet cafe, on mobile phone or other mobile device. Internet access is assumed to be not only via computer, but also by mobile phones, PDA, game machine and digital television.

Households having Personal Computers/Laptops refer to households who own desktops/laptop computers. The fixed telephone line refers to a telephone line connecting a

customer's terminal equipment (e.g. telephone set, facsimile machine) to the public switch telephone network.

### **Fertility**

Two types of fertility data were collected: lifetime fertility and current fertility. Lifetime fertility refers to the total number of live births that females 12 years and older had ever had during their lifetime. Current fertility refers to the number of live births that, females 12-54 years old had, in the 12 months preceding the Census Night.

### **Mortality**

Mortality refers to all deaths that occurred in the household during the 12 months preceding the Census Night. The report presents information on deaths due to accidents, violence, homicide and suicide. In addition, data were collected on pregnancy-related deaths of females 12-54 years.

### **Agriculture**

The census sought information on household members who are engaged in agricultural activities, including the cultivation of crops or tree planting, rearing of livestock or breeding of fish for sale or family consumption. Information was also collected on their farms, types of crops and number and type of livestock.

#### Housing conditions and facilities

The UN recommended definition of a house as "a structurally separate and independent place of abode such that a person or group of persons can isolate themselves from the hazards of climate such as storms and the sun" was adopted. The definition, therefore, covered any type of shelter used as living quarters, such as separate houses, semi-detached houses, flats/apartments, compound houses, huts, tents, kiosks and containers.

Living quarters or dwelling units refer to a specific area or space occupied by a particular household and therefore need not necessarily be the same as the house of which the dwelling unit may be a part.

Information collected on housing conditions included the type of dwelling unit, main construction materials for walls, floor and roof, holding/tenure arrangement, ownership type, type of lighting, source of water supply and toilet facilities. Data was also collected on method of disposal of solid and liquid waste.

## **1.7 Organization of the Report**

The report consists of nine chapters. Chapter one provides basic information about the district. It gives a brief background of the district, describing its physical features, political and administrative structure, social and cultural structure, economy and the methodology and concepts used in the report. Chapter two discusses the population size, composition and age structure. It further discusses the migratory pattern in the district as well as fertility and mortality.

In chapter three, the focus is on household size, composition and headship as well as the marital characteristics and nationality of the inhabitants of the district. The chapter also discusses the religious affiliations and the educational statuses of the members of the district. Chapter four focuses on economic characteristics such as economic activity status,

occupation, industries and the employment status and sectors that the people are employed.

Information Communication Technology (ICT) is discussed in chapter five. It analyses mobile phone ownership, Internet use and ownership of desktop/laptop computers while chapter six is devoted to Persons living with disabilities (PWDs) and their socio-demographic characteristics. Chapter seven concentrates on the agriculture activities of the households, describing the types of farming activities, livestock rearing and numbers of livestock kept.

In chapter eight, housing conditions such as housing stock, type of dwelling and construction materials, room occupancy, holding and tenancy, lighting and cooking facilities, bathing and toilet facilities, waste disposal and source of water for drinking or for other domestic use in the district are discussed and analysed. Finally, chapter nine presents the summary of findings and conclusions and some policy implications.

## CHAPTER TWO

### DEMOGRAPHIC CHARACTERISTICS

#### 2.1 Introduction

The analysis of the demographic characteristics of a population assists planners and policy makers to design sustainable policies to address the developmental needs and challenges of the people. This chapter deals with the demographic characteristics of the population in the Ga East Municipal and deals with issues such as the population size and distribution, age-sex structure, age dependency, migration, fertility and mortality.

#### 2.2 Population Size and Distribution

The Ga East Municipal has a population of 147,742 according to the 2010 HPC out of which 72,987 (49 percent) are males and 74,755 (51 percent) are females. Table 2.1 shows that the 0-4 age group constitutes the highest proportion of 12.2 percent, followed by the age groups 25-29 years with 11.7 percent and 20-24 years with a proportion of 11.2 percent. The lowest proportion of 0.1 percent of the population was reported for age group 95 years and older. The distribution of the population by sex and locality follows the same pattern as reported for both sexes. The table again shows that, 90 percent of the population in the Municipality resided in urban areas while only 10 percent are in rural areas.

#### 2.3 Age-Sex Structure (Population Pyramid)

The Ga East Municipal has a youthful population structure with a broad base consisting of 31.1 percent aged 0-14 years and a small proportion of 3.7 percent of elderly persons. The 15-29 years age group also account for 31.8 percent of the population in the Municipality.

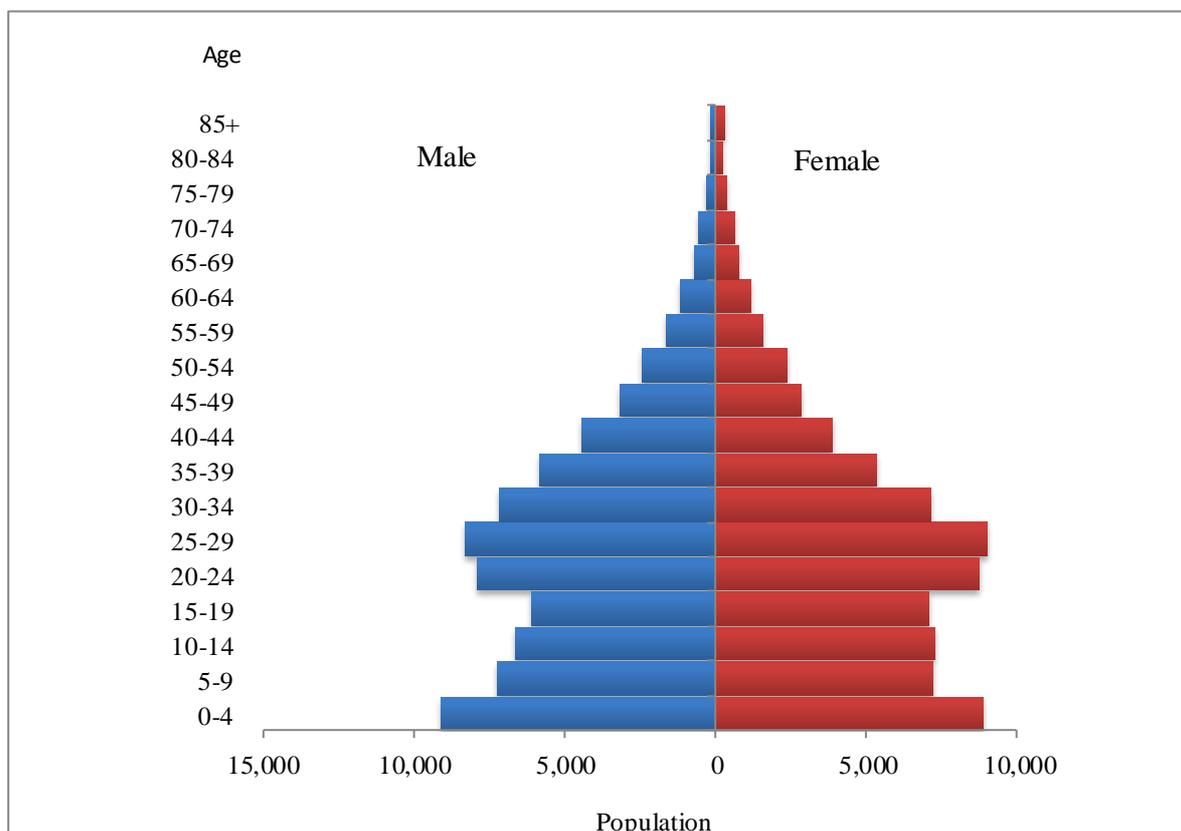

**Table 2.1 : Population by age, sex and type of locality**

Age Group	Both Sexes		Male		Female		Sex ratio
	Number	Percent	Number	Percent	Number	Percent	
All Ages	147,742	100.0	72,987	100.0	14,557	100.0	97.6
0 – 4	18,015	100.0	9,121	11.9	1,672	11.5	102.6
5 – 9	14,440	100.0	7,245	9.6	1,454	10.0	100.7
10 – 14	13,868	100.0	6,606	9.7	1,403	9.6	91
15 – 19	13,148	100.0	6,080	9.5	1,329	9.1	86
20 – 24	16,611	100.0	7,869	11.7	1,540	10.6	90
25 – 29	17,278	100.0	8,266	12.1	1,663	11.4	91.7
30 – 34	14,282	100.0	7,163	9.5	1,366	9.4	100.6

85+	496	100.0	196	0.4	49	0.3	65.3

Source: Ghana Statistical Service, 2010 Population and Housing Census

Figure 2.1 indicates that, the Municipal has a youthful population with the age cohorts 0 - 4, 5 - 9, 10 - 14, and 25 -29 having the majority of the population. The population pyramid for the Ga East Municipal reflects a typical feature in developing countries population with a broad based youthful population and a narrow apex suggesting fewer aged persons.

**Figure 2.1: Population pyramid**

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 2.3.1 Age dependency ratios

The age dependency ratio by sex and locality is presented in Table 2.2. The relationship between the population aged 0-14 years and 65 years and above and those aged 15-64 years constitute the age dependency, measured per 100 populations. In Table 2.2, the age dependency ratio is 52, which means that for every 100 people aged 15-64 years; there are approximately 52 people depending on them for survival. The dependency ratio is lower in urban areas (52.0) than in rural areas (53.3) while it is almost the same between both sexes.

**Table 2.2: Age dependency ratio by type of locality**

Age Group	Sex			Sex ratio	Type of locality	
	Both Sexes	Male	Female		Urban	Rural
All Ages	147,742	72,987	74,755	97.6	133,185	14,557
0-14	46,323	22,972	23,351	98.4	41,794	4,529
15-64	97,097	48,014	49,083	97.8	87,600	9,497
65+	4,322	2,001	2,321	86.2	3,791	531
Age-dependency ratio	52.2	52	52.3		52	53.3

## 2.4 Fertility, Mortality and Migration

The analysis of the components - fertility, mortality and migration of population are important for socioeconomic planning and policy implementation. The 2010 population and housing censuses provide a comprehensive data on fertility, mortality and migration in the Ga East Municipal and they are examined in this chapter.

### 2.4.1 Fertility

Table 2.3 shows that the reported total fertility rate in the Municipality was 2.8 children per woman, which was higher than the regional average of 2.6 children per woman. The general fertility rate is 84.1 per thousand live births and the crude birth rate is 25.1 live births per thousand populations. Compared with the other districts the Municipality recorded the seventh highest crude birth rate in the region.

**Table 2.3: Reported total fertility rate, general fertility rate and crude birth rate by district**

District	Population	Number of women 15-49 years	Number of births in last 12 months	Total Fertility Rate	*General Fertility Rate	**Crude Birth Rate
All Districts	4,010,054	1,203,838	91,077	2.6	75.7	22.7
Ga South Municipal	411,377	117,377	13,078	3.9	111.4	31.8
Ga West Municipal	219,788	64,817	5,783	2.9	89.2	26.3
Ga East Municipal	147,742	44,036	3,703	2.8	84.1	25.1
Accra Metropolis	1,665,086	514,523	32,770	2.2	63.7	19.7
Adenta Municipal	78,215	23,158	2,033	2.7	87.8	26
Ledzokuku/Krowor Municipal	227,932	69,038	4,990	2.4	72.3	21.9
Ashaiman Municipal	190,972	57,936	4,489	2.6	77.5	23.5
Tema Metropolis	292,773	89,924	6,138	2.3	68.3	21
Shai Osudoku	51,913	13,269	1,222	3	92.1	23.5
Ada East	71,671	17,576	1,817	3.5	103.4	25.4
Ga Central Municipal	117,220	34,365	3,193	3.1	92.9	27.2
La Dade Kotopon Municipal	183,528	56,845	3,466	2	61	18.9
La Nkwantanang Madina Municipal	111,926	35,055	2,514	2.5	71.7	22.5
Kpone Katamanso	109,864	32,751	2,681	2.6	81.9	24.4
Ningo Prampram	70,923	18,932	1,558	2.8	82.3	22
Ada West	59,124	14,236	1,642	4	115.3	27.8

Source: Ghana Statistical Service, 2010 Population and Housing Census

Table 2.4 shows that 55,651 females 12 years and older were enumerated in the 2010 PHC and 85,262 children were born to the females and 77,448 children survived. The table further shows that more females 42,682 were born than males 42,580 with slightly more females 39,372 surviving than males 38,076. Females aged 12-14 years had only 14 children ever born while those aged 15-19 had 380. The rest of the children were born to those aged 25-54 years.

**Table 2.4: Female population 12 years and older by age, children ever born, children surviving and sex of child**

Age	Number of Females	Children Ever Born			Children Surviving		
		Both sexes	Male	Female	Both sexes	Male	Female
All ages	55,651	85,262	42,580	42,682	77,448	38,076	39,372
12 - 14	4,247	14	9	5	7	4	3
15 - 19	7,068	380	175	205	329	146	183
20 - 24	8,742	3,092	1,556	1,536	2,784	1,362	1,422

## 2.4.2 Mortality

The level and pattern of mortality is a reflection of the health status of a population. Death rates are calculated for specific age groups in order to compare mortality at different ages or at the same age over time. Mortality refers to all deaths that occurred in the household during the 12 months preceding the census night.

Table 2.5 shows the total population, deaths in households and crude death rate by districts in the Greater Accra Region. Ga East reports a total of 504 deaths in households and a crude death rate of 3.4 per 1,000 populations. The average crude death rate for the District is however lower than the Regional rate of 4.3 per 1,000 population.

**Table 2.5: Total population, deaths in households and crude death rate by district**

District	Total Population	Deaths in Household	*Crude Death Rate
All Districts	4,010,054	17,363	4.3
Ga South Municipal	411,377	1,739	4.2
Ga West Municipal	219,788	727	3.3
<b>Ga East Municipal</b>	<b>147,742</b>	<b>504</b>	<b>3.4</b>
Accra Metropolis	1,665,086	7,276	4.4

### 2.4.3 Age specific death rates

Age Specific Death Rate (ASDR) is the number of deaths in a specific age group per 1,000 population of that age group. Because mortality varies greatly by age and sex, age-specific death rates are often given separately for males and females in a population.

The reported age specific death rate by sex is presented in Figure 2.2. As indicated in the figure, below age ten, mortality rate among males is higher than females and this may be attributed to the fact that at this age level, males are more vulnerable to diseases than their female counterparts. The age groups 25-29, 35-39 and 40-44 are the only age groups where the mortality rate among females is significantly higher than males and this may be the results of maternal mortality. There are differences in males and females mortality rates between 60-64 and 65-69 age groups.

**Figure 2.1: Reported age specific death rate by sex**

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 2.4.3 Migration

Migration is one of the components of population dynamics. The section discusses the migrants, their birthplace and duration of residence. Out of the total population of 147,742 in the Municipality, 105,922 representing 71.1 percent of the population are migrants. Regarding those who had migrated into the Municipality, the highest proportion of 33.8 percent had lived there for 1-4 years followed by 21.3 percent who have stayed for 5-9 years and 20.4 percent who have spent 10-19 years. The data further shows that, out of the migrant population of 105,922 in the Municipality; about 25 percent (26,433) were born in the Eastern region. Among the migrants from the Eastern region, the highest proportion of 31.1 percent had lived in the Municipality for 1-4 years, and 12.3 percent had stayed there for over 20 years. The Upper West region has the lowest number of (599) migrants with 31.6 percent staying for 1-4 years, and 12.4 percent had stayed there for over 20 years. A little over four in ten (43.0%) of the migrants from outside Ghana had lived in the Municipality for 1-4 years.

**Table 2.6: Birthplace and duration of residence of migrants**

Birthplace		Duration of residence (%)					
		Percent	Less than 1 year	1-4 years	5-9 years	10-19 years	20+ years
Total	105,922	100.0	14.8	33.8	21.3	20.4	9.7
Born elsewhere in the region	22,495	100.0	14.6	35.7	22.5	20.9	6.4

## CHAPTER THREE

### SOCIAL CHARACTERISTICS

#### 3.1 Introduction

The first two chapters have given us some insight into the social characteristics, economy and population of the Ga East Municipality. In this chapter an attempt would be made to analyse the household composition and structure, marital status, nationality, religious affiliation, literacy and educational status of the population of the Municipality.

#### 3.2 Household Size, Composition and Structure

A household is defined as a person or a group of persons, who live together in the same house or compound and share the same house-keeping arrangements and constitute a single consumption unit. The information on households basically includes household structure, composition, and relationship to the head of household.

##### 3.2.1 Household size

Table 3.1 presents the household size by locality. According to the data, the District has a total household population of 144,863 with 130,701 in urban and 14,162 in rural areas. In addition, there are 37,415 households in the District comprising of 33,736 urban households and the remaining, 3,679 are rural households. The mean/average number of household per house is 1.6 for the District. The average household size in the District is about four persons (3.9) and it is the same for urban while rural is about four persons thus, 4.0 (Table 3.1).

**Table 3.1: Household size by locality**

Categories	Total country	Region	Municipal		
			Total	Urban	Rural
Total household population	24,076,327	3,888,512	144,863	130,701	14,162
Number of households	5,467,054	1,036,370	37,415	33,736	3,679
Average households per house	1.6	2.2	1.6	1.6	1.5
Average household size	4.5	3.9	3.9	3.9	4.0

Source: Ghana Statistical Service, 2010 Population and Housing Census

The household population by composition and sex of the Ga East Municipality is indicated in Table 3.2. The Table shows that there are 144,863 households in the Municipality and out of this number, 37,415 representing 25.8 percent are household heads with a higher proportion of male heads (36.2%) than female heads (15.7%). The children (sons/daughters) constitute 36.8 percent where male-headed households recorded a higher proportion of 37.2 percent as compared to 36.4 percent female-headed households. Brothers/sisters constitute 5.1 percent while other relatives in the household accounts for 9.4 percent and non-relatives recorded 4.5 percent. The lowest proportion 0.3 percent in the household composition is adopted/foster children.

**Table 3.2: Household population by composition and sex**

Household composition	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	144,863	100.00	71,466	100.0	73,397	100.0
Head	37,415	25.80	25,859	36.2	11,556	15.7
Spouse (wife/husband)	17,740	12.20	1,647	2.3	16,093	21.9
Child (son/daughter)	53,283	36.80	26,556	37.2	26,727	36.4
Parent/Parent in-law	1,072	0.70	160	0.2	912	1.2

Non-relative	6,591	4.50	3,396	4.8	3,195	4.4

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 3.3 Household Structure

Table 3.3 on household population structure shows that the nuclear household (i.e. head, spouse (s) and children), constitutes 28.2 percent of the household population with similar proportions reported in male and female-headed households. Nearly one quarter (19.3%) of the household population comprises of the extended family (head, spouse(s), children and head's relatives) with almost the same proportion reported for males and females. The single parent extended and the single parent nuclear households account for 11.7 percent and 9.4 percent respectively of the household population. A significant proportion of the household population (12.5 percent) consists of head and other compositions but no spouse, with higher percentages of (14.2%) are recorded in male-headed households than in female-headed households (10.9 percent).

**Table 3.3: Household population by structure and sex**

Household structure	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	144,863	100.0	71,466	100.0	73,397	100.0
Head only	6,674	4.6	4,625	6.5	2,049	2.8
Head and a spouse only	3,768	2.6	1,897	2.7	1,871	2.5
Nuclear (Head spouse(s) children)	40,887	28.2	20,608	28.8	20,279	27.6
Extended (Head spouse(s) children Head's relatives)	27,919	19.3	13,601	19.0	14,318	19.5
Extended + non relatives	5,661	3.9	2,777	3.9	2,884	3.9
Head spouse(s) and other composition	9,088	6.3	4,505	6.3	4,583	6.2
Single parent Nuclear	12,203	8.4	5,078	7.1	7,125	9.7
Single parent Extended	16,909	11.7	6,749	9.4	10,160	13.8

### 3.4 Marital Status

The marital status has implications for the size and distribution of households, as well as the demand for housing units and residential related services. Marital status is an important factor in population because it particularly affects the degree of contraceptive use and fertility.

Table 3.4 shows the marital status of the 109,440 persons 12 years and older in the Municipality. According to the Table, 41.7 percent of the population 12 years and older are married, 45.7 have never married, 5.2 percent are in informal/consensual union and the rest are divorced (2.8%), widowed (2.7%) or separated (1.8%). With those that have never married majority of them are in the age group 12-29, while for those who are married majority of them are in the age group 30-65 years and older. There are teenagers in the age group 12-14 years who are in some form of marital unions; 8.0 percent are married and nearly one percent (0.8%) are in consensual union. This is likely to have a negative impact on their education with the risk of teenage pregnancy and early motherhood with its attendant problems.

A large proportion of the young adolescents aged 12-14years (91.2%) and those aged 15-19 years (91.8%) constitutes the highest proportion of the never married population while persons aged 55-59 years constitutes the lowest proportion of 3.3 percent. The highest proportion of those who are married (74.9% and 74.7%) are within the age groups 45-49 and 50-54 years and the lowest proportion of eight percent are within the age group 12-14 years. Again, a higher proportion of 82.1 percent of males aged 50-54 years are married while 62.8 percent of their female counterparts are married. In addition, there are more females (44.6%) than males (7.7%) aged 65 years and older who are widowed.

### 3.4.1 Marital status and level of education

The data in Table 3.5 shows that majority of persons in the marital categories have basic education. For example for those in informal/consensual unions, and those who have never been married, 63.5 percent and 50.5 percent have attained basic level of education. Only 25.4 percent and 10.1 percent of the never married population, and 17.5 percent and three percent of those in informal/consensual union have attained secondary and tertiary education respectively. Nearly, one-half (48.8%) of those who are married have basic education, with the group reporting the highest proportion of 12.3 percent being those who have tertiary education. The proportion of married females with tertiary education is lower (8.5%) as compared to that of the males (16.2%).

**Table 3.5: Persons 12 years and older by sex, marital status and level of education**

### 3.4.2 Marital Status and Economic Activity Status

Table 3.6 gives information on persons 12 years and older by sex, marital status, and economic activity status. The results show that 40.8 percent of those who have never been married are employed with 6.2 percent unemployed and 53 percent being economically not active. Furthermore, slightly more than three quarters each (78.3%) of the population who are married and in informal/consensual union are employed, while 14.8 percent and 17.8 percent respectively are economically not active. With respect to the separated or divorced, almost equal proportions (73.0% and 72.0%) of them are employed while similar proportions (5.5% and 5.3%) are unemployed. The proportion of the population who are widowed and employed is 46.2 percent while the economically not active constitutes 51.2 percent. The data again shows a higher proportion (82.7%) of married males who are employed than married females (73.9%) employed. On the other hand, 4.9 percent of the married females are unemployed as compared to three percent of married males.

**Table 3.6: Persons 12 years and older by sex, marital status and economic activity status**

### 3.5 Nationality

Nationality is defined as the country to which a person belongs. Ghanaian nationals are classified as Ghanaian by birth and by naturalization. Table 3.7 shows that the proportion of Ghanaians by birth is 94.6 percent of the total population in the Municipal and those with dual nationality and Ghanaian by naturalization constitutes 2.3 percent and 0.6 percent respectively. Citizens from ECOWAS countries constitute 1.9 percent (males, 2.3% and females, 1.5%) of the population while those from other African Countries other than ECOWAS and other countries constitute 0.3 percent.

**Table 3.7: Population by nationality and sex**

Nationality	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	147,742	100.0	72,987.0	100.0	74,755	100.0
Ghanaian by birth	139,756	94.6	68,698.0	94.1	71,058	95.1
Dual nationality (Ghanaian & Other)	3,352	2.3	1,656.0	2.3	1,696	2.3
Ghanaian by naturalization	903	0.6	458.0	0.6	445	0.6

### 3.6 Religious Affiliation

Christianity is the dominant religion in the Municipal. From Table 3.8, Christians form the largest (90.9%) of the population. The breakdown of the Christian group shows that the Pentecostal/charismatic constitutes the highest proportion of 48.3 percent followed by Protestants 25.6 percent the Catholic and other Christians record 8.5 percent. Adherents to Islamic religion constitute 5.3 percent and 2.6 percent of the population belong to no religion. Again, 92.6 percent of the total female population is in the Christian fraternity while 89.3 percent of males are adherents to Christianity confirming the notion that, females enjoy going to church than males. There are more males 5.6 percent who profess Islam than females 4.9 percent. Also a higher proportion of males, 3.7 percent belong to no religion compared to 1.5 percent of females.

**Table 3.8: Population by religion and sex**

Religion	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	147,742	100.0	72,987	100.0	74,755	100.0

### 3.7 Literacy and Education

Table 3.9 presents the population 11 years and older by sex, age and literacy status. The illustrations show that a significantly large proportion (59.3 percent) of the population are literate in English and Ghanaian Language, 30.8 percent are literate in English only and 6.7 percent are literate in Ghanaian language only. Only a small proportion of 2.3 percent and 0.9 percent are literate in English/French and Ghanaian language and English and French. Furthermore, very high proportions of the population in all the age groups are literate in English and Ghanaian language with the age group 60-64 reporting the highest proportion of 70 percent. The age groups with the highest literacy rates in English only are the 11-14 years old with 42.7 percent and the 15-19 years old with 34 percent literacy while the rest of the age groups have literacy rates between 20 percent and 30 percent. In addition, relatively low

proportions of the population are literate in a Ghanaian language only for all the age groups with the highest proportions reported for the age group 40-44. Similarly, quite low proportions of the population are literate in English and French and English/French/Ghanaian language.

### 3.7.1 Literacy and age

The data in table 3.9 shows that the highest proportion of persons 11 years and older who are literate falls in the age group 25-29, (15.6%) with the second highest being those in the age group 20-24 (15.1%). It is also observed that as age increases from 25 years to 64 years, the proportion of persons who can read and write declines. The age group 60-64 (1.9%) is the least proportion of those who are literate. For non-literate, the table shows that the highest proportion is in age group 65 years and older (16.2%).

### 3.7.2 Literacy and sex

From Table 3.9, the distribution by sex shows that the highest proportion of 72.1 percent of the males who are literate in English and Ghanaian language are in the age group 60-64 while the highest proportion of 67.6 percent reported for the females are in the age group 55-59 years.

**Table 3.9: Population 11 years and older by sex, age and literacy status**

Figure 3.3 below shows that the gender gap in terms of school attendance is improving. The gap between males (3.6%) and females (8.2%) in terms of those who have never been to school is wide (4.6%). For those who have attended school in the past the males exceed the females by 3.5 percentage points while for those who are in school, the males still outnumber the females by just about one percentage point. The implication here is that with some little more effort the gender gap in terms of school attendance could be narrowed.

**Figure 3.3: School attendance by sex**

Source: Ghana Statistical Service, 2010 Population and Housing Census

Table 3.10 presents the population of the Municipality 3 years and older by level of education, school attendance and sex. The table shows that 77.3 percent of the population 3 years and older are receiving basic education comprising of nursery (7.4%), kindergarten (13.2%), primary (39.5%), and JSS/JHS (17.2%). Twelve percent of the populations are in SSS/SHS and those who are attending tertiary level institutions recorded 9.1 percent.

Furthermore 76.5 percent of males comprising of nursery (7.5%), kindergarten (13.4%), primary (38.9%), and JSS/JHS (16.%) are at basic schools while 78.1 percent of the females comprising of nursery (7.4%), kindergarten (12.9%), primary (40.1%) and JSS/JHS (17.7%) implying higher proportion of females went to school at the basic level than their male counterparts. There are higher proportions of males (10.3%) attending tertiary institutions than females (7.9%).

For the proportion of the population who have attended school in the past, the data shows that majority of the population have attained basic education. For instance the highest proportion of 25.5 percent of those who have attained basic education have completed JSS/JHS with higher percentages (27.7%) recorded for females than males (23.5%). The lowest proportions of those who have attended school in the past are those who have attained post middle/secondary levels of education. The data also shows that more males (20.2%) than females (12.9%) have attended tertiary institutions in the past.

## CHAPTER FOUR

### ECONOMIC CHARACTERISTICS

#### 4.1 Introduction

Data on the economic characteristics of any population is significant for making sustainable interventions in development. Again, the economic characteristics serve as development indicators to assess the growth of a nation's economy. It is against this background that the economic characteristics of the population are examined in this chapter. The areas of focus include economically activity status, employment status, industry and occupation of the total population in the Municipality.

This chapter outlines data on the economic activity status of the people in the Municipality using results from the 2010 PHC.

#### 4.2 Economic Activity Status

Table 4.1 shows the population 15 years and older by activity status and sex. The table shows that 70 percent of the populations are economically active whiles 30 percent are economically not active. Out of the economically active population, 92.1 percent are employed and 7.9 percent are unemployed. Again, males are more economically active (73.3%) as compared to females (66.9%). Significantly, 92.7 percent of males and 91.4 percent of the females are employed, while 7.3 percent of the males and 8.6 percent of the females are unemployed. For the economically not active population, 23 percent did home duties, 50.8 percent are in full time education, while 6.6 percent and 6.2 percent are retired/pensioned or too old/young to work respectively.

**Table 4.1: Population 15 years and older by activity status and sex**

Activity status	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent

Source: Ghana Statistical Service, 2010 Population and Housing Census

Table 4.2 shows the population 15 years and older by sex, age and activity status. From the table, the highest proportion of 87.2 percent of the employed population is in the age group 40-44 and the lowest proportion of 15.4 percent is in the age group 15-19 years. The age group 20-24 have the highest proportion of 9.3 percent being unemployed, followed by age group 25-29 with a proportion of 8.8 percent unemployed. Understandably, majority (81.3%) of the population aged 15-19 years and slightly over two thirds (68.0%) of those aged 65 years and older are economically not active. The sex distribution shows that the highest proportions of 90.4 percent and 83.6 percent of the employed males and females respectively are aged 40-44 years while the lowest proportion of 14.2 percent of male and 16.5 percent of females are aged 15-19 years. In addition, the highest proportions of 82.8 percent and 80 percent of the economically not active males and females respectively are aged 15-19 years.

### 4.3 Occupation

Table 4.3 gives information on the employed population 15 years and older by occupation and sex. The table indicates that service and sales workers, constitutes the largest occupational group, employing 35.1 percent of the population. Craft and related trades workers is next employing 22.6 percent, while professionals constitute 10.8 percent of those employed. Plant and machinery operators and assemblers engaged 7.5 percent, Managers formed 7.3 percent, and elementary occupations engaged 7.1 percent, while other occupations employed the least (0.1%).

The proportion of females employed as service and sales workers (53.6%), is much higher than their male counterparts (18.1%). This may be due to the fact that females have low educational levels so they are left with no option than to go into petty trading, hairdressing, tailoring and other service occupations. In the craft and related trades occupation, the proportion of males (30.9%) is higher than the proportion of females (13.8%) in the same category.

**Table 4.3: Employed population 15 years and older by occupation and sex**

Occupation	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	65,395	100.0	33,967	100.0	31,428	100.0

### 4.4 Industry

Industry refers to the type of product produced or service rendered at the respondent's work place. The types of industry and the sex of employed population 15 years and older is shown in Table 4.4. The data shows that 29.8 percent of the populations are engaged in wholesale and retail; repair of motor vehicles and motorcycles and 13.1 percent are also engaged in manufacturing. Another 9.7 percent are into construction, 8 percent in other service activities, and 7.4 percent and 6.5 percent are engaged in accommodation and food service activities. There are more females in the wholesale and retail, repair of motor vehicles and motorcycles (40.1%) and the accommodation and food service industries (12.7%) as compared to the males in the these two activities (20.3% and 2.5%) respectively.

**Table 4.4: Employed population 15 years and older by Industry and sex**

Industry	Both sexes		Male		Female

## 4.5 Employment status

Employment status refers to the status of a person in the establishment where he/she currently work or previously worked. Eight employment status categories were provided: employee, self-employed without employees, self-employed with employees, casual worker, contributing family worker, apprentice, domestic employee or house help. Persons who could not be classified under any of the above categories were classified as “others”.

Table 4.5 shows the employed population 15 years and older by employment status and sex. The data shows that less than one-half (43.4%) of the population are self-employed without employees with the female proportion being as high as 54.6 percent while the males constitute only 33.1 percent. Furthermore, 37.1 percent are employees with a higher

proportion of 46.3 percent being males. A significant proportion of 9.9 percent are self-employed with employees with males and females constituting 11.1 percent and 8.5 percent respectively. Apprentice and casual workers also account for 3.5 percent and 2.6 percent respectively.

**Table 4.5: Employed population 15 years and older by employment status and sex**

Employment Sector	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	65,395	100.0	33,967	100.0	31,428	100.0
Employee	24,286	37.1	15,723	46.3	8,563	27.2
Self-employed without employee(s)	28,403	43.4	11,235	33.1	17,168	54.6

## 4.6 Employment Sector

Table 4.6 shows the employed population 15 years and older by employment sector and sex. The private informal sector dominates since it employs 70.9 percent of the population with higher proportions of 78 percent for females as compared to 64.4 percent for males. This is followed by the private formal sector employing 18.7 percent of the population with males and females constituting 23.4 percent and 13.7 percent respectively. The public (government) sector employs 8.6 percent of the population with males and females accounting for 9.8 percent and 7.3 percent respectively.

**Table 4.6: Employed population 15 years and older by employment sector and sex**

Employment Sector	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	65,395	100.0	33,967	100.0	31,428	100.0

# CHAPTER FIVE

## INFORMATION COMMUNICATION TECHNOLOGY

### 5.1 Introduction

Access to information and communication technology is essential in increasing people's knowledge and awareness of what is taking place at the global level. The world is now linked together with advanced communication technology and access to information is through the computer, mobile phone and internet facilities, which are fast, becoming essential for living a meaningful life. Globally, education or various systems of learning are now based on information and technology. ICTs have become important tools in today's knowledge-based information society and economy. This role of ICT in an emerging economy such as Ghana, has been widely recognized at various levels. The recognition is reflected in actions such as the development and deployment of a national ICT infrastructure, institutional and regulatory framework for managing the sector, promoting the use of ICT in all sectors of the economy, implementing e-governance in all government institutions and the construction of a National Data Centre as well as Regional Innovation Centres.

### 5.2 Ownership of Mobile Phones

Cellular phones have formally become the most widely used telecommunication tools in the Municipality and their use has been spreading faster than any telecommunication technology. Table 5.1 shows that 78.9 percent persons 12 years and older in the Municipality own mobile phones. Among the male population 12 years and older in the Municipality 82.7 percent own mobile phones, while that of the females is 75.2 percent (Table 5.1).

### 5.3 Use of Internet

The Internet has become a very useful communication facility for people, businesses and organizations. Some of the common uses of the internet include electronic mailing, accessing information, conducting business transactions, social networking and shopping. As shown in Table 5.1, 23.2 percent of the population 12 years and older in the Municipality use internet facilities. A higher proportion of males constituting 28.4 percent have internet access as compared to 18.2 percent of females.

**Table 5.1: Population 12 years and older by mobile phone ownership, internet facility usage, and sex**

Sex	Total population 12 years & older		Population having mobile phone		Population using internet facility	
	Number	Percent	Number	Percent	Number	Percent
Total	109,440	100.0	86,306	78.9	25,388	23.2
Male	53,789	100.0	44,482	82.7	15,274	28.4
Female	55,651	100.0	41,824	75.2	10,114	18.2

Source: Ghana Statistical Service, 2010 Population and Housing Census

## 5.4 Household Ownership of Desktop or Laptop Computers

Desktop and laptop computers are useful for accessing and processing information, including the use of the Internet, electronic mail and other services. For Ga East Municipality as a whole, only 23.3 percent of the households owned a desktop/laptop computer as depicted by Table 5.2. Again, 24.9 percent of all households headed by males owned desktop/laptop computers while 19.6 percent of the households headed by females owned desktop/laptop computers (Table 5.2).

## 5.5 Household ownership of Fixed Telephone Lines

Despite the widespread use of mobile phones and internet, fixed telephone lines still remain important, particularly in offices and businesses. Table 5.2 shows that 6.9 percent of total households had access to fixed telephone lines of which 7.1 percent of the males had access to fixed telephone lines while 6.4 percent of the females were able to access fixed telephone lines.

**Table 5.2: Households having desktop/laptop computers, fixed telephone lines and sex of head**

Sex of head	Number of households		Households having desktop/ laptop computers		Households having fixed telephone lines	
	Number	Percent	Number	Percent	Number	Percent
Total	37,415	100.0	8,704	23.3	2,584	6.9
Male	25,859	69.1	6,443	24.9	1,846	7.1
Female	11,556	30.9	2,261	19.6	738	6.4

# CHAPTER SIX

## DISABILITY

### 6.1 Introduction

This chapter first provides a general overview of persons with Disability (PWD) in the Municipality. PWDs are those persons who are restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malfunction (Ghana Statistical Service 2010). This chapter further identifies the type of disability, distribution by type of locality. Other areas of focus are disability by activity, level of education and literacy.

### 6.2 Population with Disability

The number of persons with disability constitutes 2.4 percent of the total population as illustrated in Table 6.1. Again, the sex composition of the population with disability indicates that, females (2.5%) are a little more likely to have disability than the males (2.3%).

### 6.3 Type of Disability

Table 6.1 shows that sight is by far the most common disability type (50.6%) in the Municipality. Other types of disabilities include physical (21.9%), intellectual (15.2%), emotional (18.2%), with the least type of disability among PWDs being (13.7%). Again, sight disability is more common among females (55.6%) than males (45.0%).

### 6.4 Distribution by Type of Locality

The percentage with disability varies considerably among the rural and urban populations. On the whole, the proportions with disability are more in the rural areas (2.9%) of the Municipality than in the urban populations (2.4%).

**Table 6.1: Population by type of locality, disability type and sex**

Disability Type	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent

## 6.5 Disability and Economic Activity

Table 6.2 shows that 55.8 percent of PWDs 15 years and older are employed with 4.8 percent being unemployed and 39.4 percent are economically not active. Among persons with types of disability who are employed, the highest proportion of 58.5 percent are those with sight disability and the lowest proportions of 43.8 percent each for persons with intellectual and emotional disability. The type of disability with the highest proportions that are economically not active is intellectual disability among the males with 46.1 percent and physical disability among the females with a proportion of 58.3 percent.

**Table 6.2: Persons 15 years and older with disability by economic activity status and sex**

## 6.6 Disability, Education and Literacy

Educational status is generally low among the population with disability. Table 6.3 indicates that the population three years and older with disability, who have never attended school constitutes 12.7 percent and those with basic education constitutes 47.3 percent. Those with secondary education and above constitute 36.7 percent.

Table 6.3 further reveals that, 19 percent of persons with physical challenges have never attended school, followed by those with intellectual and speech both with proportions of 17.4 percent and 17.3 percent respectively, while those with sight disability constitutes 11 percent. Furthermore, 54.1 percent of the persons with speech disability have basic education, while persons with hearing disability have the least proportion of 44.2 percent. Finally, the data

shows that 16.4 percent of females with disability have never attended school while 8.5 percent of their male counterparts have never been to school.

**Table 6.3: Population three years and older by sex, disability type and level of education**

# CHAPTER SEVEN

## AGRICULTURAL ACTIVITIES

### 7.1 Introduction

The agricultural sector is also an important contributor to the country's foreign exchange earnings. However, over the years, the variables that make agriculture important in the economy have been declining gradually, although in a fluctuating manner. The contribution to foreign exchange earnings averaged 45 percent in the 1990s but dropped to 40 percent in 2000. The contribution to GDP also declined from over 40 percent in the 1990s to 30 percent in the 2000s (ISSER, 2000, 2011). The aim of this chapter is to analyze the demographic and other characteristics of agricultural households, and the types of farming activities being undertaken.

The census data analyzed and discussed in this chapter on agricultural activity include households who are engaged in agricultural activities by locality (rural/urban), types of crops cultivated, tree planting, rearing of livestock and breeding of fish.

### 7.2 Households in Agriculture

Table 7.1 shows the distribution of households in agriculture in both urban and rural areas. It shows that those who are engaged in agriculture forms only 5.5 percent of the total households in the Municipality while those who are do not engage in agriculture constitutes 94.8 percent. Out of the households engaged in agriculture 6.4 percent are in rural areas and 5.4 percent are located in urban areas.

### 7.3 Types of Farming Activities

The types of agricultural activities in the District are presented in Table 7.1. The highest proportion of farming households are engaged in crop farming (80.1%), while the least proportion are into fish farming (3.7%). Agriculture activity practiced is mainly crop farming and livestock rearing. Crop farming in urban areas of the Municipality constitute 80.2 percent while in rural areas the proportion is 79.2 percent. There are however variations in livestock rearing where the rural proportion (29.0%) is higher than the proportion in urban localities (24.3%). The free-range system of livestock rearing which is common in rural dwellings, could account for this phenomenon.

**Table 7.1: Households by agricultural activities and locality**

Agricultural Activities	Total		Urban		Rural	
	Number	Percent	Number	Percent	Number	Percent
Total Households	37,415	100.0	33,736	100.0	3,679	100.0
Households not engaged in Agriculture	35,477	94.8	32,019	94.9	3,458	94.0
Households engaged in Agriculture	1,938	5.5	1,717	5.4	221	6.4
Crop Farming	1,552	80.1	1,377	80.2	175	79.2

## 7.4 Types of Livestock and other Animals Reared

Animal rearing is the second most important agricultural activity after crop farming. Table 7.2 shows the types of animals reared in the Municipality. From the distribution, the number of animal species kept in the District is 39,525. Out of this number, there are 671 keepers and an average of 59 livestock or other animals per keeper.

Among the ruminants, the top three are 10.5 percent of goat with 17.7 percent of keepers, 8.4 percent of sheep with 6.7 percent of keepers and 6.6 percent of cattle with 7.2 percent of keepers. The average animal per keeper for goat, sheep and cattle are 35, 74 and 54 respectively. Chicken and pigs are also reared in a sizeable quantity in the Municipality.

**Table 7.2: Distribution of livestock, other animals and keepers**

# **CHAPTER EIGHT**

## **HOUSING CONDITIONS**

### **8.1 Introduction**

The provision of periodic information on housing and housing conditions is important both to assess what has been achieved and to plan ahead. The 2010 PHC in Ghana was the second national census, following the 2000 census, which included a comprehensive housing census. The two censuses provided an official count of all structures (permanent and temporary) within the nation. Among the issues covered are the number of occupied and unoccupied dwelling units, the type of dwelling and the main materials used in house construction, occupancy status, and methods of waste disposal, utilities and household facilities. It is envisaged that the housing data from the 2010 PHC will enable planners and policy makers formulate realistic and relevant housing policies and design appropriate programmes to meet Ghana's housing needs. For instance, information obtained from the census on housing quality indicated by the materials used for constructing various housing units, and the availability of facilities such as water and sanitation, will serve as important indicators of the occupants' quality of life. Such information can aid the government in designing housing improvement programmes.

The information from housing censuses also serve as a basis for planning housing and human settlement programmes and policies, evaluation and monitoring of housing conditions and needs of the population within the context of the Millennium Development Goal Seven (MDG7). It can also be used to determine the adequacy of housing stock and assessment of the need for additional housing. It may also provide information on living conditions of those residing in temporary or substandard housing at the national, regional and local levels.

### **8.2 Housing Stock**

Table 8.1 provides information on stock of houses and households by type of locality. The total population of the Municipality is 147,742 in 2010, which is 3.7 percent of the total population of the Greater Accra Region and 0.6 percent the National population. While 90 percent of the housing stock is in the urban locality, 10 percent are in the rural locality. The total household population of the Municipality is 144,863, which is 3.7 percent of that of Greater Accra Regional household population of 2,113,766 and 0.6 percent of the whole country's population of 24,076,327.

The number of households in the Municipality is 23,424, which is 4.9 percent of total households in Greater Accra Region (474,621) and 0.69 percent of the total of 3,392,745 households in Ghana. While there are 33,736 households representing 90.17 percent in the urban locality, the Municipality has 3,679 households representing 9.83 percent in the rural localities.

The urban locality have a total of 20,976 houses representing 89.5 percent while the rural localities have a total of 2,448 houses representing 10.5 percent of the houses in the Municipality. Despite the fact that the urban population is larger, the population per house is lower in the urban (3.9) than in the rural (4.0).

The average household per house is 1.6, which is the same as that of the country's average (1.6) but below that of the Regional average of 2.2. However the urban average household per house of 1.6 is equal to that of the country's average of 1.6. The average household size of the Municipality of 3.9 is equal to the Regional average of 3.9 and that of the national average of 4.5. The average household size in the rural locality is 4.0, which is higher than that of the urban locality with 3.9. On the whole the differences between the rural and urban localities, could be attributed to the cost of land and building materials, which are comparatively higher in the urban localities.

**Table 8.1: Stock of houses and households by type of locality**

Categories	Total		Municipality		
	country	Region	Total	Urban	Rural

### 8.3 Type of Dwelling, Holding and Tenancy Arrangement

#### 8.3.1 Ownership status

Table 8.2 gives the ownership status of dwellings by sex of household head and type of locality. The data shows that private individuals own 44 percent of the dwellings in the Municipality, and household members own 39.1 percent. Relatives who are not household members own a significant proportion of 10.5 percent of the dwellings, while ownership by private employer and public/government constitutes 2.3 percent and 1.4 percent respectively. The table further shows a slightly higher proportion of female-headed households (40.8%) live in dwellings owned by household members as compared to 38.3 percent of male heads that live in dwellings owned by a household member. Again, a higher proportion of male-headed households (44.6%) live in dwellings owned by other private individuals while 42.4 percent of their female counterparts also live in dwellings owned by other private individuals.

There were more urban households (44.8%) occupying dwellings owned by other private individuals as compared to 36.5 percent of their rural counterparts occupying dwellings owned by other private individuals. On the other hand, more rural households (7.1%) occupied dwellings owned by public/government than their urban counterparts, who occupy just 0.7 percent.

**Table 8.2: Ownership Status of dwelling by sex of household and type of locality**

Ownership status	Total		District					
			Total		Male headed	Female headed	Urban	Rural
	Country	Region	Number	Percent				
<b>Total</b>	5,467,054	1,036,370	37,415	100.0	100.0	100.0	100.0	100.0

### 8.3.2 Type of Dwelling Units

Table 8.3 provides the type of occupied dwelling unit by sex of household head and type of locality. The Municipality has a total of 37,415 occupied dwelling units representing 3.6 percent of the occupied dwelling units in the Greater Accra Region. Compound houses (rooms), which are the most common constitutes 32.2 percent of the dwelling units in the Municipality. Another 29.9 percent of households live in separate houses while a significant proportion of households 9.4 percent and 9.1 percent respectively occupied uncompleted buildings and semi-detached houses. Households in the Municipality that occupy improvised homes (kiosks/containers) constitute 8.7 percent while those who occupy flats/apartments are 7.5 percent. A higher proportion of rural households (14.5%) live in semi-detached houses as compared to 8.5 percent of urban households who live in such houses. On the other hand, there are more urban households (19.1%) who live in improvised homes than in rural areas (4.6%).

**Table 8.3: Type of occupied dwelling unit by sex of household head and type of locality**

Type of dwelling	Total		District

## 8.4 Construction Materials

### 8.4.1 Material for wall

The main construction material for outer wall of dwelling unit by type of locality is shown in Table 8.4. As indicated in the table, the most dominant construction material for outer walls in the Municipality is cement blocks/concrete (84.0%), followed by wood (9.2%). Other building materials and metal sheet/slate/asbestos for outer walls constitutes 2.5 percent and 1.5 percent of walls for dwellings respectively in the Municipality. Mud brick/earth and landcrete are also used as the construction material in one percent each of dwellings. Burnt bricks (0.4%), stone (0.3%) and bamboo (0.2%) are the least used materials in construction of outer walls in the Municipality.

The proportion of urban dwelling units with cement blocks/concrete as outer wall is 83.7 percent, which is below the proportion in the rural areas with 86.5 percent. A higher proportion of dwellings (9.6%) are constructed with wood in urban areas than in rural areas (5.4%).

**Table 8.4: Main construction material for outer wall of dwelling unit by type of locality**

Material for Outer wall	Total		District			
			Total		Urban	Rural
	Country	Region	Number	Percent

### 8.4.2 Main construction material for the floor

Table 8.5 shows the main material for the floor of dwelling units by type of locality. The type of material used for the floor has implications for health since contamination and ease of infection varies with the type of material used for the floor. According to the table, the main material used for floors is cement/concrete (66.1%).

Ceramic/porcelain/granite/marble tiled floors constitute 9.4 percent of the dwelling units in the Municipality. Floors of dwelling units constructed with terrazzo/terrazzo tiles account for 6.35 percent followed by earth/mud floors with 5.9 percent, while wood and vinyl tiles constitute 5.6 percent and 5.3 percent respectively. The cement/concrete is mostly used for floors in both urban and rural localities, but the proportion in the rural area is higher (70.1%) than that of the urban areas (65.7%). The proportion of floors made with earth/mud in the rural locality is 6.3 percent compared to that of the urban area (5.9%). Stone (0.5%) and burnt bricks (0.3%) form very low proportion of floor of dwelling units.

**Table 8.2: Main construction materials for the floor of dwelling unit by type of locality**

Materials for the floor	Total		District			
			Total		Urban	Rural
	Country	Region	Number	Percent		
Total	5,467,054	1,036,370	37,415	100.0	100.0	100.0

### 8.4.3 Materials for roof

Table 8.6 shows the main construction material for roofing of dwelling unit by type of locality. The most used material for roofing of dwelling units in the Municipality is metal sheet (71.3%), followed by slate/asbestos (16.5%) while roofing tiles and cement/concrete are used to roof 4.9 percent and 4.3 percent of the dwellings respectively. The rest of the roofing materials used for dwellings constitute less than three percent of all the materials used in the Municipality. There are high proportions of dwelling units using metal sheet for roofing in both urban and rural localities, but the urban proportion is higher (71.8%) than the rural (67.2%). In the rural areas, however, the use of slate/asbestos (20.3%) is higher than in urban areas (16.1%).

**Table 8.6: Main construction material for roofing of dwelling unit by type of locality**

Main Roofing material	Total		District			
			Total		Urban	Rural
	Country	Region	Number	Percent		
Total	5,817,607	1,090,397	39,069	100.0	100.0	100.0

## 8.5 Room Occupancy

The number of rooms households occupy is one of the good indicators for assessing how crowded dwelling units in a locality are and the space available per person. Table 8.7 presents the households by size and number of sleeping rooms occupied in a dwelling unit. The data shows that, more than one-half (54.2%) of households use one room for sleeping, while 22 percent and 10.3 percent of households have two and three rooms respectively for sleeping. Households that had four and five rooms for sleeping constitute 7.6 percent and 3.5

percent respectively with those who have six or more rooms for sleeping accounting for less than 2.4 percent of the households.

**Table 8.7: Household size and number of sleeping rooms occupied in dwelling unit**

Household Size	Total households		Number of sleeping rooms								
	Number	Percent	One room	Two rooms	Three rooms	Four rooms	Five rooms	Six rooms	Seven rooms	Eight rooms	Nine rooms or more
Total	37,415	100.0	54.2	22.0	10.3	7.6	3.5	1.4	0.5	0.3	0.2

## 8.6 Access to Utilities and Household Facilities

### 8.6.1 Source of lighting

Table 8.8 provides information on the main source of lighting of dwelling units by type of locality. From the table, three (3) main sources of non-natural lighting can be identified: electricity (mains), kerosene lamp, and flashlight/torch. The data show that majority of the dwelling units (78.4%) in the Municipality use electricity (mains) as the main source of lighting. The use of flashlight/torch is the next with 7.9 percent after electricity (mains) and closely followed by kerosene lamp (7.6%). Flashlight is becoming a major source of lighting due to the introduction of long-lasting batteries and rechargeable (solar) lamps and also as a result of load shedding and frequent power outages. Dwelling units that use electricity from private generators is less than one percent while the least used source of lighting is crop residue (0.1%).

The table further shows that, while 78.7 percent of urban dwelling units use electricity (mains), 75.7 percent use it in the rural localities. Flashlight usage form 8.2 percent of urban dwelling units while it is 5.4 percent in rural localities.

**Table 8.8: Main source of lighting of dwelling unit by type of locality**

Main source of light	Total		District			
	Country	Region	Total		Urban	Rural
			Number	Percent		
Total	5,467,054	1,036,370	37,415	100.0	100.0	100.0
Electricity (mains)	3,511,065	902,831	29,328	78.4	78.7	75.7
Electricity (private generator)	36,142	6,644	321	0.9	0.6	3.5

### 8.6.2 Source of cooking fuel

Table 8.9 gives information on the main source of cooking fuel, and cooking space used by households. The table clearly indicates that the highest proportion of households (54.7%) use gas as the main source of cooking fuel, followed by charcoal and wood, which constitute 36.3 percent and 2.7 percent respectively. The use of gas is becoming common since its introduction to curb the use of wood and charcoal. The use of kerosene as cooking fuel is about one percent (0.9%), while the rest of the sources of cooking fuel used in the Municipality have values below 0.5 percent.

The main sources of cooking fuel in both urban and rural households are gas and charcoal. Almost the same proportions of households (54.7% and 36.5%) are using gas and charcoal in urban and rural areas.

### 8.6.3 Cooking Space

The percentage distribution of cooking spaces available to households, as given in Table 8.9, shows that the most common cooking spaces available in the Municipality, as well as the region and the country are separate rooms for exclusive use of household, open space in compound and verandah.

Structures with roof but without walls are also used in the Municipality. A significant proportion of households (42.1%), use separate rooms exclusively in the Municipality as cooking space followed by 26.5 percent of households that use the verandah while 16.5 percent use open space compound. Only 6.8 percent of the households have no cooking space.

The proportion of urban households (42.3%) that use separate rooms exclusively for cooking is higher than the proportion of rural households (40.2%). Again, more urban households (16.8%) use the open space in compound than their rural counterparts (14.3%).

**Table 8.9: Main Source of cooking fuel, and cooking space used by household**

Cooking fuel/cooking space	Total Country	Region	District

## 8.7 Main Source of Water for Drinking and other Domestic Use

### 8.7.1 Main Source of Water for Drinking

Table 8.10 presents the main source of water of dwelling units for drinking and other domestic purposes. Water is often classified as potable or not. Sources considered as potable are household connection to public pipe borne water supply system, public standpipe, borehole, protected (lined) hand dug well, protected spring and rainwater collection. Unprotected wells and springs, vendors, and tanker-trucks are not normally considered potable.

Table 8.10 shows that the main sources of drinking water for households in the Municipality is sachet water (54.7%), pipe borne water outside dwelling (13.0%), pipe borne water inside dwelling (11.9%), borehole/pump tube well (6.5%), public tap/standpipe (5.2%), and tanker supply/vendor provided (4.1%). Households that use bottled water constitute 1.6 percent while those who use protected wells form 1.4 percent.

The data further shows that nearly sixty percent (58.4%) of the households in the urban areas use sachet water for drinking as compared to 21.3 percent of rural households. On the other hand, higher proportions of rural households use pipe-borne water inside (33.0%) and outside

(23.1%) dwellings for drinking as compared to urban households using pipe-borne water inside (11.9%) and outside (13.0%) for drinking.

**Table 8.10: Main source of water of dwelling unit for drinking and other domestic uses**

### 8.7.2 Main source of water for other domestic use

Table 8.10 further illustrate that the main source of water for other domestic purposes by households is bore-hole/pump tube well (26.2%), followed by pipe borne water outside dwelling unit (20.9%), pipe-borne water inside dwelling unit (17.8%), tanker supply/vendor provided (14.5%), public tap/stand pipe (8.4%), and protected well (8.0%). More rural households (41.7%) use pipe-borne water inside dwellings for other domestic purposes as compared to urban households (15.1%).

## 8.8 Bathing and Toilet Facilities

### 8.8.1 Toilet facilities

Table 8.11 shows that the water closet (W.C) is the most used toilet facility by (42.9%) households in the Municipality, followed by Pit latrine (22.7%), Public toilet (13.6%), KVIP (11.8%) and those who use no facilities or resort to the use of bush/beach/field forms 8.2 percent. More rural households (45.2%) use the WC as compared to the urban households (42.6%). Almost the same proportions of urban (22.7%) and rural (22.3%) households use pit latrines but higher proportions of urban households (12.2%) than rural households (8.3%) use the KVIP. There are more households with no toilet facility in rural localities (16.1%) than in the urban areas (7.3%) implying that some of them could be practicing open defecation.

**Table 8.11: Toilet facility and bathing facilities used by household**

### 8.8.2 Bathing facilities

Table 8.11 presents the type of bathing facilities used by household. The Table gives three (3) main bathing facilities used by households: Own bathroom for exclusive use (40.5%), shared separate bathroom in the same house (23.3%) and shared open cubicle (18.4%). At the locality level, higher proportions of urban households 40.9 percent and 23.9 percent have own bathroom for exclusive use and shared separate bathroom in the same house for bathing compared to 37.3 percent and 17.6 percent of rural households that use the same type of facility. Significant proportions of rural and urban households 22.4 percent and 18 percent also use shared open cubicle as bathing facility.

## 8.9 Method of Waste Disposal

### 8.9.1 Solid waste disposal

Table 8.12 shows the methods of solid and liquid waste disposal by households in the Municipality. The data shows that the collection method (50.9%) is the most common method used in solid waste disposal by households, while about a quarter (25.7%) of households burn their waste and 10.8 percent use the public dump (container) method. In addition, seven percent of households use the public dump (open space) for disposal of waste while nearly two percent of households dump their waste indiscriminately. The data further shows that 52.6 percent of urban households use the collection method to dispose of solid waste as compared to 35.3 percent of rural households. On the other hand, more rural households (35.7%) than urban (24.6%) households burn their solid waste.

### 8.9.2 Liquid waste disposal

The table further shows that a third (33.5%) of households throw their liquid waste onto the compound. Almost equal proportions of households ranging dispose of their liquid waste into pits (soak away), onto the street/outside and into the gutter. Significant proportions of households also throw their waste into the sewerage system (12.5%) and through drainage system into a gutter (9.7%). The pattern of liquid waste disposal in the localities is not too different from what pertains in the Municipality but the few differences are that, a higher proportion of urban households (15.7%) dispose of their liquid waste into the gutter as compared to 7.7 percent of their rural counterparts who do same. Again, 17 percent of rural households dispose of their liquid waste through the sewerage system as compared to 12 percent in urban areas.

**Table 8.12: Method of solid and liquid waste disposal by type of locality**

# **CHAPTER NINE**

## **SUMMARY OF FINDINGS, CONCLUSION AND POLICY RECOMMENDATIONS**

### **9.1 Introduction**

Following from the analysis and discussion above, this chapter summarizes the major findings and policy implications from the previous chapters. Based on the identified challenges affecting the Ga East Municipality, the chapter also recommends possible actions to manage them.

### **9.2 Summary of Findings**

#### **Demographic characteristics**

Chapter Two analyzed the population size and distribution, age-sex structure, age dependency, migration, fertility and mortality in the Ga East Municipality using data from the 2010 PHC.

The total population of the Municipality is 147,742 according to the 2010 PHC out of which 72,987 (49.0%) are males and 74,755 (51.0%) are females. The highest proportions of the population (12.2% and 11.7%) are aged 0-4 years and 25-29 years.

The total fertility rate for the Municipality is 2.8 children per woman, while the general fertility rate was 84 live births per 1000 women and the crude birth rate being 25.1 live births per 1000 population. Out of the total population in the Municipality, 105,022 representing 71.1 percent of the population migrated to the Municipality 48.6 percent going there within the last five years with 25 percent coming from the Eastern region.

#### **Social characteristics**

The Municipality recorded 144,863 households and out of this number, 37,415 representing 25 percent are household heads and children constitute 36.8 percent of the household population. The analyses revealed that the nuclear family system is dominant among the various households within the Municipality. The nuclear family have a total household population of 40,887, which constitutes 28.2 percent of the household population while the extended family (27,919) constitutes 19.3 percent of the total household population. The total number of single parents in the nuclear family system in the Municipality is 12,203 representing 8.4 percent of the total household population. The total number of single parents in the extended family system is 16,909, which represented 8.4 percent of the total household population.

Nearly 60 percent of the population 12 years and older were literate in English and Ghanaian language. Majority of the population in the Municipality are Christians, followed by adherents to Islam and those with no religion.

Furthermore, Ghanaians by birth constitutes 94.6 percent of the total population in the Municipality. Citizens from ECOWAS countries accounted for 1.9 percent (male, 2.3% and

female, 1.5%) of the Municipality's total population while those from other African countries other than ECOWAS and other countries constitute 0.3 percent.

### **Economic characteristics**

From the economically active population, 92.1 percent are employed while 7.9 percent are unemployed. Majority (81.3%) of the population aged 15-19 years and slightly over two thirds (68.0%) of those aged 65 years and older are economically not active. The major occupational groups in the Municipality are those in the service and sales workers, craft and related trades workers, professionals and plant & machinery operators and assemblers. The major industries that employ significant proportion of the population are the wholesale and retail; repair of motor vehicles (29.8%), manufacturing (13.1%), construction and other services. The private informal sector employs 70.9 percent of the population followed by 18.7 percent and 8.6 percent in the private formal and public (government) sectors respectively.

### **Information Communication Technology**

About 78.9 percent of the population aged persons 12 years and older in the Municipality own mobile phones with a higher proportion of 82.7 percent for males than females, 75.2 percent. Only 23.2 percent of the population aged 12 years and older use the internet. A higher proportion of males (28.4%) use the internet as compared to only (18.2%) of females. Ga East Municipality accounts for 6.9 percent of households with fixed telephone lines. Among the households that have fixed telephone lines, 7.1 percent of males have access to fixed telephone lines while 6.4 percent of females are able to access fixed telephone lines. Only 23.3 percent of the households own a desktop/laptop computer.

### **Disability**

The analyses reveal that 2.4 percent of the population in Ga East Municipality have some form of disability. The sex composition of the population with disability indicates that, females are marginally more likely to have disability (2.5%) than the males (2.3%). Sight disability was by far the most common disability type (50.6%) in the Municipality. The data reveals that the population three years and older with disabilities who have never attended school constitute 6 percent; those with basic education constitute 21 percent.

### **Agriculture activities**

The analyses in chapter seven revealed that only 5.2 percent of the households are engaged in agriculture as compared with 94.8 percent who are not engaged in agriculture. There are more urban households that are engaged in agriculture as compared to their rural counterparts. The analyses further reveal that chicken was the most reared livestock in the Municipality (51.3%).

### **Housing conditions**

The analyses revealed that private individuals and household members own little more than two-fifth (44.0%) and nearly 40 percent (39.1%) of the dwellings respectively in the Municipality. Compound houses (rooms) constitute 32.2 percent while separate houses amount to 29.9 percent of the dwelling units. These constitute the most commonly occupied dwelling units in the Municipality. The main construction materials used for the outer walls of dwellings is cement blocks/concrete used to build 84 percent of the dwelling units. About two thirds (66.1%) of floors of dwellings units are made of cement/concrete while the main material for roofing 71 percent of the dwelling units are metal sheets.

Slightly more than half (54.2%) of the households in the Municipality have one room for sleeping. Nearly 80 percent (78.4%) of the households use electricity (mains) as their main source of lighting. The main source of cooking fuel is gas used by 54.7 percent of households followed by 36.3 percent of households that use charcoal as cooking fuel. Forty two percent of households use separate rooms for exclusive use of household as cooking space. The data also shows that 54.7 percent of households in the Municipality use sachet water as their main source of drinking water. Over two-fifth (42.9%) of households in the Municipality use the WC and another 22.7 percent use the pit latrine as toilet facility. A bathroom for exclusive use, shared separated bathroom in the same house and shared open cubicles are the common types of bathing facilities in the Municipality. Furthermore, one-half of households (50.9%) use the collection method to dispose of their solid waste and another 25.7 percent of households dispose of solid waste by burning. The data shows that one-third (33.5%) of households in the Municipality throw their liquid waste onto the compound.

### **9.3 Policy Recommendation**

- The increase of the aged population is an indicative of good health care in the municipality. The rich experience of the aged should be tapped for development. With the aged population it is important to provide infrastructure facilities to support them. As women spend more time schooling, the chances of entering into early marriages reduce, which then reduces the fertility rates. The Municipality together with other collaborators such as the GSS and NGOs should get funds to find out what the pull and push factors were in the Municipality. This will enable the Municipality to check the emerging issues related to streetism and slum development.
- Given the population dynamics in the Municipality there is the need for infrastructure development to attract investors into the Municipality for development and job creation. At the same time, there is the need to provide increase access to formal education by removing economic and spatial barriers. There should be mass public education on the use of contraceptives or vigorous campaign targeted at the youth to abstain from sex.
- The government through the Ga East Municipal must double its efforts to expand modern technical and vocation education with practical apprenticeship programmes involving employers to improve employment skills in the Municipality. This is likely to increase employment and expand opportunities for many under-employed persons. The Ga East Municipal should also lobby for the establishment of a technical and vocational school in addition to the secondary school. This is because not all who graduate from the junior high school could go to senior high school.
- Looking at the number of persons with disability in the Municipality, the government through the Municipal should provide infrastructure, tools and services that will be user friendly for persons with disability. Special provision should be made to encourage PWDs to attain higher level of education. These include establishment of special schools, support services, and provision of hearing aids to PWDs. The rest are provision of Braille and wheelchairs to encourage them to learn.
- Generally, solid and liquid waste facilities in the municipality are very poor. It is important for the Municipal to ensure that sanitation is improved through the enforcement of byelaws on environmental sanitation and public education. This will bring about a reduction in the portfolio of investment on sanitation by the Municipal

and improved health condition of the people. The Municipal Environmental Health officers should pay regular visits to homes to check toilet facilities in the Municipality. The Municipal should enforce laws requiring landlords to provide toilet facilities in their homes. This will reduce the use of bush and open fields by the people.
