## **PREFACE AND ACKNOWLEDGEMENT**

No meaningful developmental activity can be undertaken without taking into account the characteristics of the population for whom the activity is targeted. The size of the population and its spatial distribution, growth and change over time, in addition to its socio-economic characteristics are all important in development planning.

A population census is the most important source of data on the size, composition, growth and distribution of a country's population at the national and sub-national levels. Data from the 2010 Population and Housing Census (PHC) will serve as reference for equitable distribution of national resources and government services, including the allocation of government funds among various regions, districts and other sub-national populations to education, health and other social services.

The Ghana Statistical Service (GSS) is delighted to provide data users, especially the Metropolitan, Municipal and District Assemblies, with district-level analytical reports based on the 2010 PHC data to facilitate their planning and decision-making.

The District Analytical Report for the Kpone Katamanso District is one of the 216 district census reports aimed at making data available to planners and decision makers at the district level. In addition to presenting the district profile, the report discusses the social and economic dimensions of demographic variables and their implications for policy formulation, planning and interventions. The conclusions and recommendations drawn from the district report are expected to serve as a basis for improving the quality of life of Ghanaians through evidence-based decision-making, monitoring and evaluation of developmental goals and intervention programmes.

For ease of accessibility to the census data, the district report and other census reports produced by the GSS will be disseminated widely in both print and electronic formats. The report will also be posted on the GSS website: [www.statsghana.gov.gh](http://www.statsghana.gov.gh).

The GSS wishes to express its profound gratitude to the Government of Ghana for providing the required resources for the conduct of the 2010 PHC. While appreciating the contribution of our Development Partners (DPs) towards the successful implementation of the Census, we wish to specifically acknowledge the Department for Foreign Affairs, Trade and Development (DFATD) formerly the Canadian International Development Agency (CIDA) and the Danish International Development Agency (DANIDA) for providing resources for the preparation of all the 216 district reports. Our gratitude also goes to the Metropolitan, Municipal and District Assemblies, the Ministry of Local Government, Consultant Guides, Consultant Editors, Project Steering Committee members and their respective institutions for their invaluable support during the report writing exercise. Finally, we wish to thank all the report writers, including the GSS staff who contributed to the preparation of the reports, for their dedication and diligence in ensuring the timely and successful completion of the district census reports.

**Dr. Philomena Nyarko**  
**Government Statistician**

# **EXECUTIVE SUMMARY**

## **Introduction**

The district census report is the first of its kind since the first post-independence census was conducted in 1960. The report provides basic information about the district. It gives a brief background of the district, describing its physical features, political and administrative structure, socio-cultural structure and economy. Using data from the 2010 Population and Housing Census (2010 PHC), the report discusses the population characteristics of the district, fertility, mortality, migration, marital status, literacy and education, economic activity status, occupation, employment; Information Communication Technology (ICT), disability, agricultural activities and housing conditions of the district. The key findings of the analysis are as follows (references are to the relevant sections of the report):

## **Population size, structure and composition**

The population of Kpone-Katamanso District, according to the 2010 Population and Housing Census, is 109,864 representing 2.7 percent of the region's total population. Males constitute 48.7 percent and females represent 51.3 percent. About 90.4 percent of the population live in urban localities. The district has a sex ratio of 88.9. The population of the district is youthful (under 15 years) (34.5%) depicting a broad base population pyramid which tapers off with a small number of elderly persons 60 years and above (3.4%). The total age dependency ratio for the District is 58.1, the dependency ratio in the rural localities is higher (58.7) than that of the dependency ratio in the urban areas (58.0).

## **Fertility, mortality and migration**

The District has a Total Fertility Rate of 2.6. The General Fertility Rate is 81.9 births per 1000 women aged 15-49 years which is the sixth highest for the region. The Crude Birth Rate (CBR) is 24.4 per 1000 population. The crude death rate for the district is 4.0 per 1000. The death rate for males is highest for age 70 and above representing 42.0 deaths per 1000 population while for the females, the highest death rate of 40.2 deaths per 1000 population is also for age 70 and above. Accident/violence/homicide/suicide accounts for 12.0 percent of deaths, while 88.0 percent is by other causes. The district has a migrant population of 77,328. Majority of migrants (66.6%) living in the district were born in elsewhere in another Region, while 31.1 percent were born elsewhere in the Greater Accra region. For migrants born in another region, those born in Volta region constitute 35.2 percent followed by Eastern with 23.8 percent and Central, 15.3 percent.

## **Household Size, composition and structure**

The district has a household population of 106,398 with a total number of 24,800 households. The average household size in the district is 4.0 persons per household. Children constitute the largest proportion of the household members accounting for 38.4 percent. Spouses form about 12.6 percent while other relatives constitute 9.2 percent. Nuclear (head, spouse(s), children) constitute 30.4 percent of the total number of households in the district and this is followed by Extended households (head, spouse(s), children and head's relative) (21.3%).

## **Marital status**

About 42 percent of the population aged 12 years and older are married and 42.5 percent have never married. By age 25-29 years, about 47.8 of females are married compared to 26.2

percent of males. At age 65 and above, widowed females account for as high as 50.2 percent while widowed males account for only 8.2 percent. . Among the married, 10.7 percent have no education while about 4.5 percent of the never married have never been to school. About 81.7 percent of the married population are employed, 4.7 percent are unemployed and 13.6 percent are economically not active. More than half of those who have never married (51.7%) are economically not active with 6.9 percent unemployed.

### **Nationality**

The proportion of Ghanaians by birth in the district is 95.5 percent. Those who have naturalised constitute 0.6 percent and the non-Ghanaian population in the district is 1.8 percent.

### **Literacy and education**

Of the population 11 years and above, 90.7 percent are literate and 9.3 percent are non-literate. The proportion of literate males is higher (94.7 %) than that of females (87.0%). About five out of ten people (49.3%) indicated they could speak and write both English and Ghanaian languages. Of the population aged 3 years and above (100,670) in the district, 8.7 percent has never attended school, 36.6 percent are currently attending and 54.7 percent have attended in the past.

### **Economic Activity Status**

About 75.1 percent of the population aged 15 years and older are economically active while 24.9 per cent are economically not active. Of the economically active population, 91.6 percent are employed while 8.4 percent are unemployed. For those who are economically not active, a larger percentage of them are students (53.3%) and 23.7 percent perform household duties. Again, about 51.9 percent of the unemployed are seeking work for the first and available for work.

### **Occupation**

Of the employed population, about 31.2 percent are engaged as service and sales workers, 23.2 percent in craft and related trade and 12.0 percent in Elementary occupations. About 15.9 percent are engaged as managers, professionals, and technicians.

### **Employment status and sector**

Of the employed population 15 years and older 46.0 percent are self-employed without employees, while 2.9 percent are contributing family workers. About 7.2 percent are self-employed with employees and 36.9 percent are employees. The private informal sector is the largest employer in the district, employing 70.5 percent of the population followed by the public sector with 7.4 percent.

### **Information Communication Technology**

Of the population 12 years and above, 73.1 percent have mobile phones. Men who own mobile phones constitute 77.6 percent as compared to 68.9 percent of females. About 16.7 percent of the population 12 years and older use internet facilities in the district. Also, about 15.4 percent of households in the district have desktop/laptop computers.

### **Disability**

About 1.8 percent of the district's total population has one form of disability or the other. The proportion of the male population with disability is the same (1.8%) as that of females

(1.8%). The types of disability in the district include sight, physical, hearing, speech, intellect, and emotion. Persons with sight disability recorded the highest of 31.2 percent followed by physical (30.1%), and emotional disability (25.1%). Of the population disabled, 55.4 percent are employed and 39.8 percent economically not active. About 17 percent of the population with disability have never attended school.

### **Agriculture**

In the district, 8.3 percent of households are engaged in agriculture. In the rural localities, 10.6 percent of households are agricultural households while in the urban localities, 8.1 percent of households are into agriculture. Most households in the district (62.5%) are involved in crop farming with chicken as the dominant animal reared in the district.

### **Housing**

The housing stock of Kpone-Katamanso District is 15,801 representing 22 percent of the total number of houses in the Greater Accra Region. The average number of persons per house is 7.0.

#### ***Type, tenancy arrangement and ownership of dwelling units***

A little more than two fifth (48.0%) of all dwelling units in the district are compound houses; 26.4 percent are separate houses and 8.7 percent are semi-detached houses. About 45 percent of the dwelling units in the district are owned by members of the household; 39.3 percent are owned by private individuals; 8.1 percent are owned by a relative who is not a member of the household and only 3.8 percent are owned by public or government. About 1.6 percent of the dwelling units is owned through mortgage schemes.

#### ***Material for construction of outer wall, floor and roof***

The main construction material for outer walls of dwelling units in the district is cement blocks/concrete accounting for 83.1 percent with wood constituting 12.0 percent of outer walls of dwelling units in the district. Cement/concrete (84.9%) and Ceramic/porcelain/marble tiles (4.2%) are the two main materials used in the construction of floors of dwelling units in the district. Metal sheets are the main roofing material (68.5%) for dwelling units in the district, while 25.9 percent of dwelling used slate/asbestos to roof their dwellings.

#### ***Room occupancy***

Single room constitutes the highest percentage (56.9%) of sleeping rooms occupied by households in housing units in the district. About 11.6 percent of households with 10 or more members occupy single rooms.

#### ***Utilities and household facilities***

The three main sources of lighting in dwelling units in the district are electricity (74.9%), kerosene lamp (13.4%) and flashlight/torch (7.5%), The main source of fuel for cooking for most households in the district is charcoal (45.8%). The proportion for rural is higher than that for urban. The four main sources of water in the district are pipe borne water, public standpipe and Tanker supply. About 36.8 percent of households drink water from pipe-borne outside dwelling.

Most households (27.1%) in the District use the public toilet (WC, KVIP, Pit, pan) as places for convenient. Also, about 26.1 percent of households use W.C. A third of households

(33.0%) in the district have bathrooms for exclusive use of members while another 27.0 percent use shared separate bathroom in the same house.

***Waste disposal***

Most households (32.0%) dump their solid waste in a public dump. Another 29.2 percent have their solid waste collected. For liquid waste disposal, throwing waste onto the street (29.3%) and onto the compound (37.5%) are the two most common methods used by households in the district.

# **CHAPTER ONE**

## **INTRODUCTION**

### **1.1 Background**

Kpone-Katamanso District (KKD) was carved from the Tema Metropolitan Assembly in 2012 with the promulgation of the Legislative instrument (L.I.2031). It shares boundaries with Tema to the west, Dangme West to the east, the Gulf of Guinea to the south and Akuapem South to the north.

### **1.2 Physical Features**

Kpone-Katamanso District is located along the coastal part of Tema in the Greater Accra Region. The topography of district is generally flat and forms part of the coastal plains, ranging from 0m (South) to 35m (North) above sea level. The soil types in the area are sandy, clayey, humus soils and suitable for farming activities. Some portions of the land are very rocky.

The district lies in the coastal savannah zone of Ghana. It enjoys a dry equatorial climate with a mean annual rainfall ranging between 730mm to 790mm. The rainy season is usually from April to July (major rainy season) and from September to November (minor rainy season). The highest amount of rain is experienced from May to July. Temperatures are high all year round with significant daily and seasonal variations. The annual average temperatures range from 25°C to 30°C in the major rainy season while in the minor season temperatures range from 27°C to 35°C.

The vegetation zones in the district comprise shrub and grassland. The grassland is found in areas like Appolonia, Gbetsile, Santeo and Katamanso where livestock farming is practised. The Precambrian rocks of the Dahomeyan formation underlie the district: metamorphic rocks mainly consisting of granite, gneiss and schist have been derived from sedimentary layers.

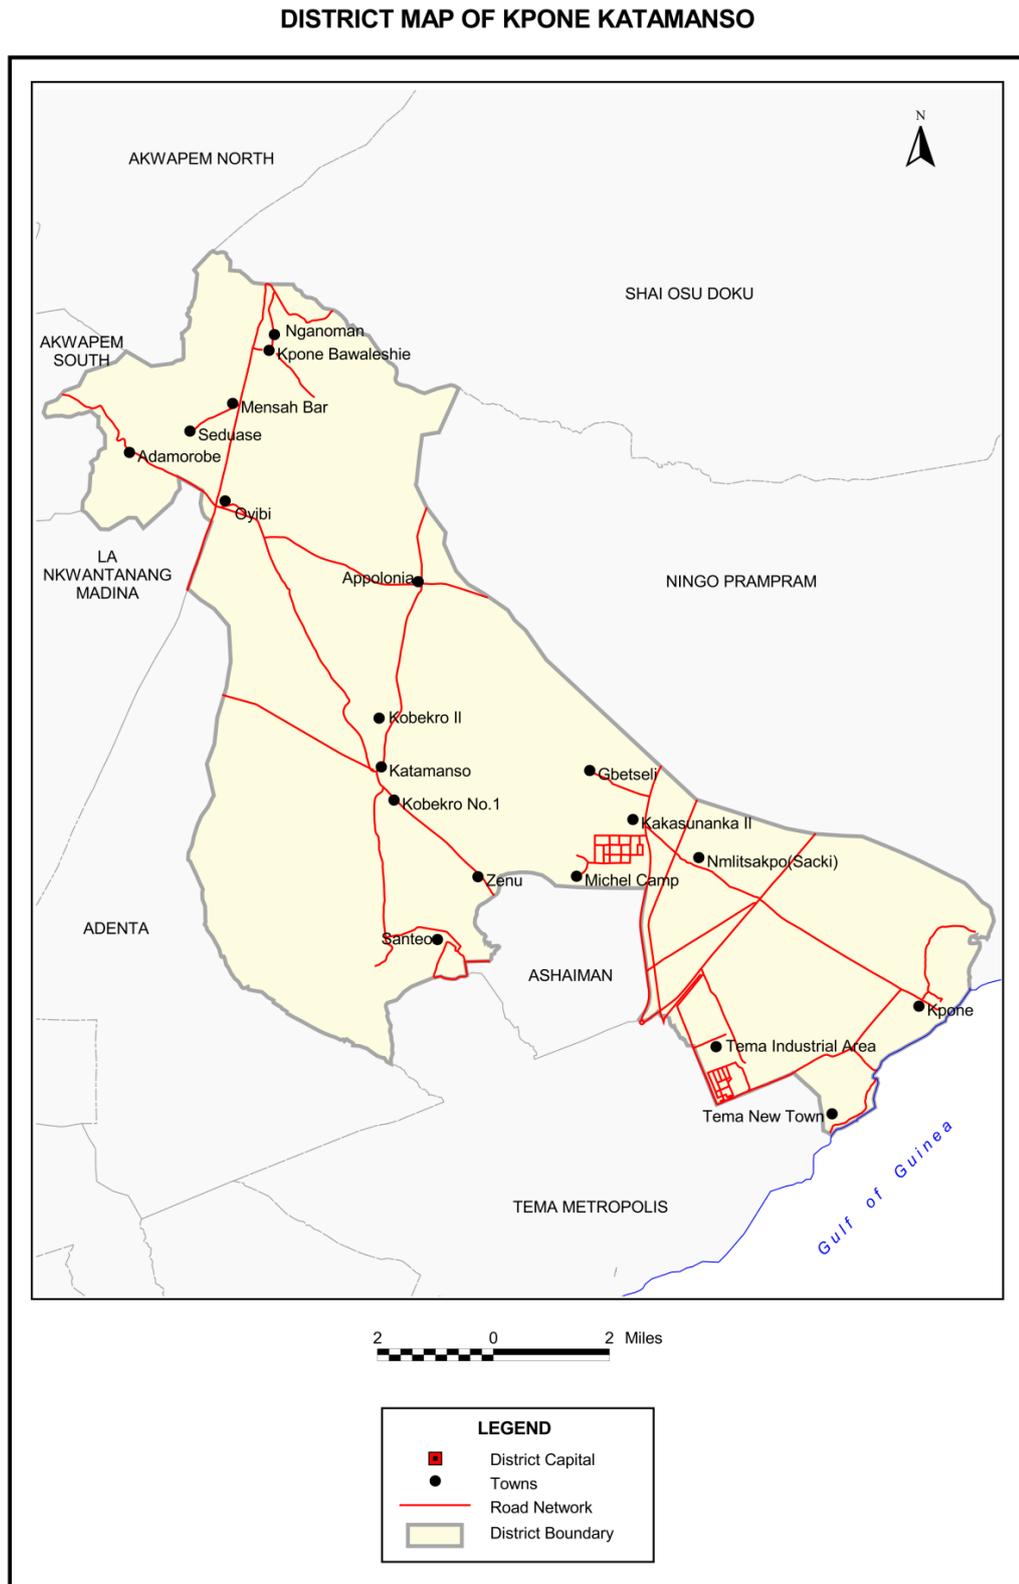

### **1.3 Political Administration**

Kpone-Katamanso District Assembly is the highest political authority in the district and exercises deliberative, legislative and executive powers. In total, the Assembly has a membership of 29. The membership is made up of 18 elected, 9 appointed, 1 Member of Parliament and 1 District Chief Executive (DCE). The DCE is the political head of the district. The District Coordinating Director is the administrative head. The district has four (4) area councils.

### **1.4 Social and Cultural Structure**

The district has recognised traditional authorities that help in the developmental process of the district. In Kpone the head of the traditional institution is the paramount chief who rules with the help of council of elders. These chiefs help to settle disputes and plan development projects. The traditional council plays key role in mobilising the people for communal activities and are often the first point of call for the preparation and organisation of social events.

**Figure 1.1: Map of Kpone-Katamanso District**

Source: Ghana Statistical Service, GIS

The Katamanso Area has over 22 chiefs who represent the various communities. Apart from the Katamanso Chief all the other chiefs are responsible to the Tema Mantse (the paramount chief of Tema). The Ga-Dangmes are the dominant ethnic group in the district followed by Ewes and Akans. The major festivals in the area are Homowo and Kpiedzoo. The festivals provide an occasion for the gathering together of Ga-Dangmes from every part of the country to eat together and welcome new members of the family while remembering the dead. It is also an occasion whereby people come together to develop their communities and settle family disputes. Ga language is the predominately spoken language among the traditional people in the district.

#### **1.4.1 Health**

The district has both private and public health facilities. There are a number of primary health facilities in the district. Since the district is close to Tema West, most referral cases are sent to the Tema General Hospital. The public health facilities in the district have no resident doctors serving the people. However they offer outpatient, antenatal and prenatal care services.

#### **1.4.2 Education**

The district has both public and private educational facilities. They comprise of kindergarten, nursery, primary and junior high schools. Both trained and untrained teachers are employed in these schools. The district has no senior high school and hence junior high school graduates seek senior high school education elsewhere. There are several vocational institutes and one private university in the district.

#### **1.4.3 Sanitation**

Access to sanitary facilities in the District is generally appreciable. The District has only 11 public toilet facilities. Out of the 11 public toilet facilities, six are located in Kpone, two in Oyibi and the remaining three are in Kakasunanka. Several communities do not have any public toilet facilities and this encourages open defecation in the district. While refuse containers and waste dumps are available at several sites in the district, some residents complain that they are not adequate. Unauthorised dump sites are common within the district.

#### **1.4.4 Water**

About 60 percent of the households in the district have access to pipe borne water from the Ghana Water Company Limited. The remaining 40 percent who do not have access to pipe borne water, depend on water tanker services, dams, rivers, streams and lagoons as their source of water. Many of the residents who have access to potable water from the Ghana Water Company do not have regular flow of piped water due to the low pressure of the pipe borne water system. Many residents therefore rely on private water tanker services for delivery of water especially during the dry season.

### **1.5 Economy**

The main occupation in the area includes fishing, fish mongering, and farming (crop production and livestock rearing). Some of the youth in the district undertake sand winning as their means of livelihood. Most of the communities in the district are engaged in stone quarry. Geological resources such as salt deposits exist at Kpoi-Ete.

### **1.5.1 Agriculture**

Agricultural activities in the district are prominent and they can be grouped into crop and livestock production, fishing and agro-processing. The crops produced in the district are maize, cassava, tomatoes, onions, pepper and okro. Crop farming is predominant in the Katamanso area. This community produces the bulk of agricultural produce within the district.

Animal rearing is common in the district and mostly practised in the Katamanso area. The types of animal reared include cattle, sheep, goats, pigs, rabbits and grass cutter. These animals are produced on both subsistence and commercial basis. Also, a number of livestock and poultry farms are in the district.

Fishing and its related activities play a vital role in the economic development of the district. Fishing is predominant in the Kpone area due to the community's closeness to the sea. The type of fishing practised includes ring net fishing, hooking and wide net fishing. The fishermen use local canoes powered by outboard motors.

### **1.5.2 Industry**

There are quite a number of industries in the district. Among them is the Free Zone area where majority of the industries in the district are located. These industries offer employment opportunities to the people in and around the district.

The district is privileged to have the light industrial area in its locality. The resident artisans are involved in various activities like car spraying, welding, fitting and vulcanizing. It has an active Garages Association under the Ghana National Association of Garages and the area where all these artisans are sited is popularly known as 'Kokompe'.

### **1.5.3 Service and Commerce**

Commercial activities within the district are tied to the outside markets of Tema, Accra, Kasei, Ashaiman, Agomenya and Kasoa. The fairly good nature of the roads in the area has resulted in good commercial linkages with these markets. The main commodities traded are; smoked fish, okro, palm nut and vegetables. The service sector is also prominent in the district. There exist business centres; small communication centres, photo shops and restaurants. The district is endowed with beaches as the sea lie along most of the communities, but unfortunately these beaches have not been developed. There exist also the Katamanso forest which has a historical background but unfortunately it has also not been fully developed.

### **1.5.4 Financial Services**

The district has rural banks which provide banking services to residents and farmers in the communities. Residents are able to use other financial services outside the district.

### **1.5.5 Roads/ Transportation**

The district is accessible and well connected to other towns. Apart from the major roads within the district that are tarred, all other roads within the district are not tarred. The condition of the minor roads in the area is not good; they are often dusty, rough, bumpy and sometimes very muddy during the rainy season especially at areas where there are no proper drains.

### **1.5.6 Energy**

The District is connected to the National grid and so has regular electricity supply. The Asogli thermal plant is located in the district. The power from the plant produces additional power to the nation and the district specifically. This has facilitated in the operation of a lot of businesses in the District. The community also uses charcoal, kerosene, gas and firewood as their source of energy for cooking and its related activities. The fishermen in the area also use pre-mixed fuel for their fishing operations.

## **1.6 Census Methodology, Concepts and Definitions**

### **1.6.1 Introduction**

Ghana Statistical Service (GSS) was guided by the principle of international comparability and the need to obtain accurate information in the 2010 Population and Housing Census (2010 PHC). The Census was, therefore, conducted using all the essential features of a modern census as contained in the United Nations Principles and Recommendations for countries taking part in the 2010 Round of Population and Housing Censuses.

Experience from previous post independence censuses of Ghana (1960, 1970, 1984 and 2000) was taken into consideration in developing the methodologies for conducting the 2010 PHC. The primary objective of the 2010 PHC was to provide information on the number, distribution and social, economic and demographic characteristics of the population of Ghana necessary to facilitate the socio-economic development of the country.

### **1.6.2 Pre-enumeration activities**

#### **Development of census project document and work plans**

A large scale statistical operation, such as the 2010 Population and Housing Census required meticulous planning for its successful implementation. A working group of the Ghana Statistical Service prepared the census project document with the assistance of two consultants. The document contains the rationale and objectives of the census, census organisation, a work plan as well as a budget. The project document was launched in November 2008 as part of the Ghana Statistics Development Plan (GSDP) and reviewed in November 2009.

#### **Census secretariat and committees**

A well-structured management and supervisory framework that outlines the responsibilities of the various stakeholders is essential for the effective implementation of a population and housing census. To implement the 2010 PHC, a National Census Secretariat was set up in January 2008 and comprised professional and technical staff of GSS as well as staff of other Ministries, Departments and Agencies (MDAs) seconded to GSS. The Census Secretariat was primarily responsible for the day-to-day planning and implementation of the census activities. The Secretariat had seven units, namely; census administration, cartography, recruitment and training, publicity and education, field operations and logistics management, data processing, and data analysis and dissemination.

The Census Secretariat was initially headed by an acting Census Coordinator engaged by the United Nations Population Fund (UNFPA) in 2008 to support GSS in the planning of the Census. In 2009, the Census Secretariat was re-organised with the Government Statistician as the National Chief Census Officer and overall Coordinator, assisted by a Census Management Team and a Census Coordinating Team. The Census Management Team had

oversight responsibility for the implementation of the Census. It also had the responsibility of taking critical decisions on the census in consultation with other national committees. The Census Coordinating Team, on the other hand, was responsible for the day-to-day implementation of the Census programme.

A number of census committees were also set up at both national and sub-national levels to provide guidance and assistance with respect to resource mobilization and technical advice. At the national level, the committees were the National Census Steering Committee (NCSC), the National Census Technical Advisory Committee (NCTAC) and the National Census Publicity and Education Committee (NCPEC). At the regional and district levels, the committees were the Regional Census Implementation Committee and the District Census Implementation Committee, respectively.

The Regional and District Census Implementation Committees were inter-sectoral in their composition. Members of the Committees were mainly from decentralized departments with the Regional and District Coordinating Directors chairing the Regional Census Implementation Committee and District Census Implementation Committee, respectively. The Committees contributed to the planning of district, community and locality level activities in areas of publicity and field operations. They supported the Regional and District Census Officers in the recruitment and training of field personnel (enumerators and supervisors), as well as mobilizing logistical support for the census.

### **Selection of Census topics**

The topics selected for the 2010 Population and Housing Census were based on recommendations contained in the UN Principles and Recommendations for 2010 Round of Population and Housing Censuses and the African Addendum to that document as well as the needs of data users. All the core topics recommended at the global level, i.e., geographical and internal migration characteristics, international migration, household characteristics, demographic and social characteristics such as age, date of birth, sex, and marital status, fertility and mortality, educational and economic characteristics, issues relating to disability and housing conditions and amenities were included in the census.

Some topics that were not considered core by the UN recommendations but which were found to be of great interest and importance to Ghana and were, therefore, included in the 2010 PHC are religion, ethnicity, employment sector and place of work, agricultural activity, as well as housing topics, such as, type of dwelling, materials for outer wall, floor and roof, tenure/holding arrangement, number of sleeping rooms, cooking fuel, cooking space and Information Communication Technology (ICT).

### **Census mapping**

A timely and well implemented census mapping is pivotal to the success of any population and housing census. Mapping delineates the country into enumeration areas to facilitate smooth enumeration of the population. The updating of the 2000 Census Enumeration Area (EA) maps started in the last quarter of 2007 with the acquisition of topographic sheets of all indices from the Survey and Mapping Division of the Lands Commission. In addition, digital sheets were also procured for the Geographical Information System Unit.

The Cartography Unit of the Census Secretariat collaborated with the Survey and Mapping Division of the Lands Commission and the Centre for Remote Sensing and Geographic Information Services (CERSGIS) of the Department of Geography and Resource Development, University of Ghana, to determine the viability of migrating from analog to

digital mapping for the 2010 PHC, as recommended in the 2000 PHC Administrative Report. Field cartographic work started in March 2008 and was completed in February 2010.

### **Development of questionnaire and manuals**

For effective data collection, there is the need to design appropriate documents to solicit the required information from respondents. GSS consulted widely with main data users in the process of the questionnaire development. Data users including MDAs, research institutions, civil society organisations and development partners were given the opportunity to indicate the type of questions they wanted to be included in the census questionnaire.

Documents developed for the census included the questionnaire and manuals, and field operation documents. The field operation documents included Enumerator's Visitation Record Book, Supervisor's Record Book, and other operational control forms. These record books served as operational and quality control tools to assist enumerators and supervisors to control and monitor their field duties respectively.

### **Pre-tests and trial census**

It is internationally recognized that an essential element in census planning is the pre-testing of the questionnaire and related instructions. The objective of the pre-test is to test the questionnaire, the definition of its concepts and the instructions for filling out the questionnaire.

The census questionnaire was pre-tested twice in the course of its development. The first pre-test was carried out in March 2009 to find out the suitability of the questions and the instructions provided. It also tested the adequacy and completeness of the responses and how respondents understood the questions. The second pre-test was done in 10 selected enumeration areas in August, 2009. The objective of the second pre-test was to examine the sequence of the questions, test the new questions, such as, date of birth and migration, and assess how the introduction of 'date of birth' could help to reduce 'age heaping'. With regard to questions on fertility, the pre-tests sought to find out the difference, if any, between proxy responses and responses by the respondents themselves. Both pre-tests were carried in the Greater Accra Region. Experience from the pre-tests was used to improve the final census questionnaire.

A trial census which is a dress rehearsal of all the activities and procedures that are planned for the main census was carried out in October/November 2009. These included recruitment and training, distribution of census materials, administration of the questionnaire and other census forms, enumeration of the various categories of the population (household, institutional and floating population), and data processing. The trial census was held in six selected districts across the country namely; Saboba (Northern Region), Chereponi (Northern Region), Sene (Brong Ahafo Region), Bia (Western Region), Awutu Senya (Central Region), and Osu Klottey Sub-Metro (Greater Accra Region). A number of factors were considered in selecting the trial census districts. These included: administrative boundary issues, ecological zone, and accessibility, enumeration of floating population/outdoor-sleepers, fast growing areas, institutional population, and enumeration areas with scattered settlements.

The trial census provided GSS with an opportunity to assess its plans and procedures as well as the state of preparedness for the conduct of the 2010 PHC. The common errors found during editing of the completed questionnaires resulted in modifications to the census questionnaire, enumerator manuals and other documents. The results of the trial census assisted GSS to arrive at technically sound decisions on the ideal number of persons per

questionnaire, number of persons in the household roster, migration questions, placement of the mortality question, serial numbering of houses/housing structures and method of collection of information on community facilities. Lessons learnt from the trial census also guided the planning of the recruitment process, the procedures for training of census field staff and the publicity and education interventions.

### **1.6.3 Census Enumeration**

#### **Method of enumeration and field work**

All post- independence censuses (1960, 1970, 1984, and 2000) conducted in Ghana used the de facto method of enumeration where people are enumerated at where they were on census night and not where they usually reside. The same method was adopted for the 2010 PHC. The de facto count is preferred because it provides a simple and straight forward way of counting the population since it is based on a physical fact of presence and can hardly be misinterpreted. It is thought that the method also minimizes the risks of under-enumeration and over enumeration. The canvasser method, which involves trained field personnel visiting houses and households identified in their respective enumeration areas, was adopted for the 2010 PHC.

The main census enumeration involved the canvassing of all categories of the population by trained enumerators, using questionnaires prepared and tested during the pre-enumeration phase. Specific arrangements were made for the coverage of special population groups, such as the homeless and the floating population. The fieldwork began on 21st September 2010 with the identification of EA boundaries, listing of structures, enumeration of institutional population and floating population.

The week preceding the Census Night was used by field personnel to list houses and other structures in their enumeration areas. Enumerators were also mobilized to enumerate residents/inmates of institutions, such as, schools and prisons. They returned to the institutions during the enumeration period to reconcile the information they obtained from individuals and also to cross out names of those who were absent from the institutions on Census Night. Out-door sleepers (floating population) were also enumerated on the Census Night.

Enumeration of the household population started on Monday, 27<sup>th</sup> September, 2010. Enumerators visited houses, compounds and structures in their enumeration areas and started enumerating all households including visitors who spent the Census Night in the households. Enumeration was carried out in the order in which houses/structures were listed and where the members of the household were absent, the enumerator left a call-back-card indicating when he/she would come back to enumerate the household. The enumeration process took off smoothly with enumerators poised on completing their assignments on schedule since many of them were teachers and had to return to school. However, many enumerators ran short of questionnaires after a few days' work.

Enumeration resumed in all districts when the questionnaire shortage was resolved and by 17<sup>th</sup> October, 2010, enumeration was completed in most districts. Enumerators who had finished their work were mobilized to assist in the enumeration of localities that were yet to be enumerated in some regional capitals and other fast growing areas. Flooded areas and other inaccessible localities were also enumerated after the end of the official enumeration period. Because some enumeration areas in fast growing cities and towns, such as, Accra Metropolitan Area, Kumasi, Ksoa and Techiman were not properly demarcated and some

were characterized by large EAs, some enumerators were unable to complete their assigned tasks within the stipulated time.

#### **1.6.4 Post Enumeration Survey**

In line with United Nations recommendations, GSS conducted a Post Enumeration Survey (PES) in April, 2011 to check content and coverage error. The PES was also to serve as an important tool in providing feedback regarding operational matters such as concepts and procedures in order to help improve future census operations. The PES field work was carried out for 21 days in April 2011 and was closely monitored and supervised to ensure quality output. The main findings of the PES were that:

- 97.0 percent of all household residents who were in the country on Census Night (26<sup>th</sup> September, 2010) were enumerated.
- 1.3 percent of the population was erroneously included in the census.
- Regional differentials are observed. Upper East region recorded the highest coverage rate of 98.2 percent while the Volta region had the lowest coverage rate of 95.7 percent.
- Males (3.3%) were more likely than females (2.8%) to be omitted in the census. The coverage rate for males was 96.7 percent and the coverage rate for females was 97.2 percent. Also, the coverage rates (94.1%) for those within the 20-29 and 30-39 age groups are relatively lower compared to the coverage rates of the other age groups.
- There was a high rate of agreement between the 2010 PHC data and the PES data for sex (98.8%), marital status (94.6%), relationship to head of household (90.5%) and age (83.0%).

#### **1.6.5 Release and dissemination of results**

The provisional results of the census were released in February 2011 and the final results in May 2012. A National Analytical report, six thematic reports, a Census Atlas, 10 Regional Reports and a report on Demographic, Social, Economic and Housing were prepared and disseminated in 2013.

#### **1.6.6 Concepts and Definitions**

The 2010 Population and Housing Census of Ghana followed the essential concepts and definitions of a modern Population and Housing Census as recommended by the United Nations (UN). It is important that the concepts, definitions and recommendations are adhered to since they form the basis upon which Ghana could compare her data with that of other countries.

The concepts and definitions in this report cover all sections of the 2010 Population and Housing Census questionnaires (PHC1A and PHC1B). The sections were: geographical location of the population, Household and Non-household population, Literacy and Education, Emigration, Demographic and Economic Characteristics, Disability, Information Communication Technology (ICT), Fertility, Mortality, Agricultural Activity and Housing Conditions.

The concepts and definitions are provided to facilitate understanding and use of the data presented in this report. Users are therefore advised to use the results of the census within the context of these concepts and definitions.

### **Region**

There were ten (10) administrative regions in Ghana during the 2010 Population and Housing Census as they were in 1984 and 2000.

### **District**

In 1988, Ghana changed from the local authority system of administration to the district assembly system. In that year, the then existing 140 local authorities were demarcated into 110 districts. In 2004, 28 new districts were created; this increased the number of districts in the country to 138. In 2008, 32 additional districts were created bringing the total number of districts to 170. The 2010 Population and Housing Census was conducted in these 170 administrative districts (these are made-up of 164 districts/municipals and 6 metropolitan areas). In 2012, 46 new districts were created to bring the total number of districts to 216. There was urgent need for data for the 46 newly created districts for planning and decision-making. To meet this demand, the 2010 Census data was re-programmed into 216 districts after carrying out additional fieldwork and consultations with stakeholders in the districts affected by the creation of the new districts.

### **Locality**

A locality was defined as a distinct population cluster (also designated as inhabited place, populated centre, settlement) which has a NAME or LOCALLY RECOGNISED STATUS. It included fishing hamlets, mining camps, ranches, farms, market towns, villages, towns, cities and many other types of population clusters, which meet the above criteria. There were two main types of localities, rural and urban. As in previous censuses, the classification of localities into 'urban' and 'rural' was based on population size. Localities with 5,000 or more persons were classified as urban while localities with less than 5,000 persons were classified as rural.

### **Population**

The 2010 Census was a "de facto" count and each person present in Ghana, irrespective of nationality, was enumerated at the place where he/she spent the midnight of 26th September 2010.

### **Household**

A household was defined as a person or a group of persons, who lived together in the same house or compound and shared the same house-keeping arrangements. In general, a household consisted of a man, his wife, children and some other relatives or a house help who may be living with them. However, it is important to remember that members of a household are not necessarily related (by blood or marriage) because non-relatives (e.g. house helps) may form part of a household.

### **Head of Household**

The household head was defined as a male or female member of the household recognised as such by the other household members. The head of household is generally the person who has economic and social responsibility for the household. All relationships are defined with reference to the head.

## **Household and Non-household population**

Household population comprised of all persons who spent the census night in a household setting. All persons who did not spend the census night in a household setting (except otherwise stated) were classified as non-household population. Persons who spent census night in any of the under listed institutions and locations were classified as non-household population:

- (a) Educational Institutions
- (b) Children's and Old People's Homes
- (c) Hospitals and Healing Centres
- (d) Hotels
- (e) Prisons
- (f) Service Barracks
- (g) Soldiers on field exercise
- (h) Floating Population: The following are examples of persons in this category:
  - i. All persons who slept in lorry parks, markets, in front of stores and offices, public bathrooms, petrol filling stations, railway stations, verandas, pavements, and all such places which are not houses or compounds.
  - ii. Hunting and fishing camps.
  - iii. Beggars and vagrants (mentally sick or otherwise).

## **Age**

The age of every person was recorded in completed years disregarding fractions of days and months. For those persons who did not know their birthdays, the enumerator estimated their ages using a list of district, regional and national historical events.

## **Nationality**

Nationality is defined as the country to which a person belongs. A distinction is made between Ghanaians and other nationals. Ghanaian nationals are grouped into Ghanaian by birth, Ghanaian with dual nationality and Ghanaian by naturalization. Other nationals are grouped into ECOWAS nationals, Africans other than ECOWAS nationals, and non-Africans.

## **Ethnicity**

Ethnicity refers to the ethnic group that a person belonged to. This information is collected only from Ghanaians by birth and Ghanaians with dual nationality. The classification of ethnic groups in Ghana is that officially provided by the Bureau of Ghana Languages and which has been in use since the 1960 census.

## **Birthplace**

The birthplace of a person refers to the locality of usual residence of the mother at the time of birth. If after delivery a mother stayed outside her locality of usual residence for six months

or more or had the intention of staying in the new place for six or more months, then the actual town/village of physical birth becomes the birthplace of the child.

### **Duration of Residence**

Duration of residence refers to the number of years a person has lived in a particular place. This question is only asked of persons not born in the place where enumeration took place. Breaks in duration of residence lasting less than 12 months are disregarded. The duration of residence of persons who made multiple movements of one (1) year or more is assumed to be the number of years lived in the locality (town or village) since the last movement.

### **Religion**

Religion refers to the individual's religious affiliation as reported by the respondent, irrespective of the religion of the household head or the head's spouse or the name of the person. No attempt was made to find out if respondents actually practiced the faith they professed.

### **Marital Status**

Marital status refers to the respondent's marital status as at Census Night. The question on marital status was asked only of persons 12 years and older. The selection of the age limit of 12 years was based on the average age at menarche and also on the practice in some parts of the country where girls as young as 12 years old could be given in marriage.

### **Literacy**

The question on literacy referred to the respondent's ability to read and write in any language. A person was considered literate if he/she could read and write a simple statement with understanding. The question on literacy was asked only of persons 11 years and older.

### **Education**

#### ***School Attendance***

Data was collected on school attendance for all persons three (3) years and older. School attendance refers to whether a person has ever attended, was currently attending or has never attended school. In the census, school meant an educational institution where a person received at least four hours of formal education.

Although the lower age limit of formal education is six years for primary one, eligibility for the school attendance question was lowered to three years because pre-school education has become an important phenomenon in the country.

#### ***Level of Education***

Level of education refers to the highest level of formal school that a person ever attended or was attending. This information was obtained for persons 3 years and older.

### **Activity Status**

Activity status refers to economic or non-economic activity of respondents during the 7 days preceding census night. Information on type of activity was collected on persons 5 years and older. A person was regarded as economically active if he/she:

- a. Worked for pay or profit or family gain for at least 1 hour within the 7 days preceding Census Night. This included persons who were in paid employment or self-employment or contributing family workers
- b. Did not work, but had jobs to return to
- c. Were unemployed.

The economically not active were persons who did not work and were not seeking for work. They were classified by reasons for not being economically active. Economically not active persons included homemakers, students, retired persons, the disabled and persons who were unable to work due to their age or ill-health.

### **Occupation**

This referred to the type of work the person was engaged in at the establishment where he/she worked. This was asked only of persons 5 years and older who worked 7 days before the census night, and those who did not work but had a job to return to as well as those unemployed who had worked before. All persons who worked during the 7 days before the census night were classified by the kind of work they were engaged in. The emphasis was on the work the person did during the reference period and not what he/she was trained to do. For those who did not work but had a job to return to, their occupation was the job they would go back to after the period of absence. Also, for persons who had worked before and were seeking for work and available for work, their occupation was on the last work they did before becoming unemployed. If a person was engaged in more than one occupation, only the main one was considered.

### **Industry**

Industry referred to the type of product produced or service rendered at the respondent's work place. Information was collected only on the main product produced or service rendered in the establishment during the reference period.

### **Employment Status**

Employment status refers to the status of a person in the establishment where he/she currently works or previously worked. Eight employment status categories were provided: employee, self-employed without employees, self-employed with employees, casual worker, contributing family worker, apprentice, domestic employee (house help). Persons who could not be classified under any of the above categories were classified as "other".

### **Employment Sector**

This refers to the sector in which a person worked. The employment sectors covered in the census were public, private formal, private informal, semi-public/parastatal, NGOs and international organizations.

### **Disability**

Persons with disability were defined as those who were unable to or were restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation. Information was collected on persons with visual/sight impairment, hearing impairment, mental retardation, emotional or behavioural disorders and other physical challenges.

## **Information Communication Technology (ICT)**

ICT questions were asked for both individuals and households. Persons having mobile phones refer to respondents 12 years and older who owned mobile phones (irrespective of the number of mobile phones owned by each person). Persons using internet facility refers to those who had access to internet facility at home, internet cafe, on mobile phone or other mobile device. Internet access is assumed to be not only via computer, but also by mobile phones, PDA, game machine and digital television.

Households having Personal Computers/Laptops refer to households who own desktops/laptop computers. The fixed telephone line refers to a telephone line connecting a customer's terminal equipment (e.g. telephone set, facsimile machine) to the public switch telephone network.

## **Fertility**

Two types of fertility data were collected: lifetime fertility and current fertility. Lifetime fertility refers to the total number of live births that females 12 years and older had ever had during their life time. Current fertility refers to the number of live births that females 12-54 years old had in the 12 months preceding the Census Night.

## **Mortality**

Mortality refers to all deaths that occurred in the household during the 12 months preceding the Census Night. The report presents information on deaths due to accidents, violence, homicide and suicide. In addition, data were collected on pregnancy-related deaths of females 12-54 years.

## **Agriculture**

The census sought information on household members who are engaged in agricultural activities, including the cultivation of crops or tree planting, rearing of livestock or breeding of fish for sale or family consumption. Information was also collected on their farms, types of crops and number and type of livestock.

## **Housing Conditions and Facilities**

The UN recommended definition of a house as "a structurally separate and independent place of abode such that a person or group of persons can isolate themselves from the hazards of climate such as storms and the sun" was adopted. The definition, therefore, covered any type of shelter used as living quarters, such as separate houses, semi-detached houses, flats/apartments, compound houses, huts, tents, kiosks and containers.

Living quarters or dwelling units refer to a specific area or space occupied by a particular household and therefore need not necessarily be the same as the house of which the dwelling unit may be a part.

Information collected on housing conditions included the type of dwelling unit, main construction materials for walls, floor and roof, holding/tenure arrangement, ownership type, type of lighting, source of water supply and toilet facilities. Data was also collected on method of disposal of solid and liquid waste.

## **1.7 Organization of the Report**

The report consists of nine chapters. Chapter one provides basic information about the district. It gives a brief background of the district, describing its physical features, political and administrative structure, social and cultural structure, economy and the methodology and concepts used in the report. Chapter two discusses the population size, composition and age structure. It further discusses the migratory pattern in the district as well as fertility and mortality.

In chapter three, the focus is on household size, composition and headship as well as the marital characteristics and nationality of the inhabitants of the district. The chapter also discusses the religious affiliations and the educational statuses of the members of the district. Chapter four focuses on economic characteristics such as economic activity status, occupation, industries and the employment status and sectors that the people are employed.

Information Communication Technology (ICT) is discussed in chapter five. It analyses mobile phone ownership, internet use and ownership of desktop/laptop computers while chapter six is devoted to Persons living with disabilities (PWDs) and their socio-demographic characteristics. Chapter seven concentrates on the agricultural activities of the households, describing the types of farming activities, livestock rearing and numbers of livestock reared.

In chapter eight, housing conditions such as housing stock, type of dwelling and construction materials, room occupancy, holding and tenancy, lighting and cooking facilities, bathing and toilet facilities, waste disposal and source of water for drinking or for other domestic use in the district are discussed and analyzed in detail. The final chapter, Chapter nine presents the summary of findings and conclusions. It also discusses the policy implications of the findings for the district.

## CHAPTER TWO

### DEMOGRAPHIC CHARACTERISTICS

#### 2.1 Introduction

Effective development planning depends upon knowledge of the composition, growth, and movement of population. Population size, composition and age-sex structures are necessary in understanding the components of population variation and change, i.e., fertility, mortality, and migration dynamics of any country. The composition of the population may determine the needs and wellbeing of the district. The objective of this chapter is to analyse the size, composition, age-sex structure, and changes in the population of the Kpone-Katamanso District based on the 2010 Population and Housing Census. This chapter also discusses these characteristics in terms of size and distribution, sex ratio, fertility, mortality and migration of persons enumerated during the census.

#### 2.2 Population Size and Distribution

The census results as shown in Table 2.1 indicate that the population of the district is 109,864, made up of 48.7 percent males and 51.3 percent females, giving a sex ratio of 94.5. The sex ratio of 94.5 means there are about 94 males to every 100 females in the district. The table further shows that, the 0-4 year age group has the highest proportion of the population (13.5%) followed by the 5-9 age group (11.0%). More than half (54.1%) of the population are below age 24 years. The proportion of those aged 60 years and older is 5.5 percent in the district. Young adults (15-29) constitute 30.2 percent of the population

**Table 2.1: Population by age and sex**

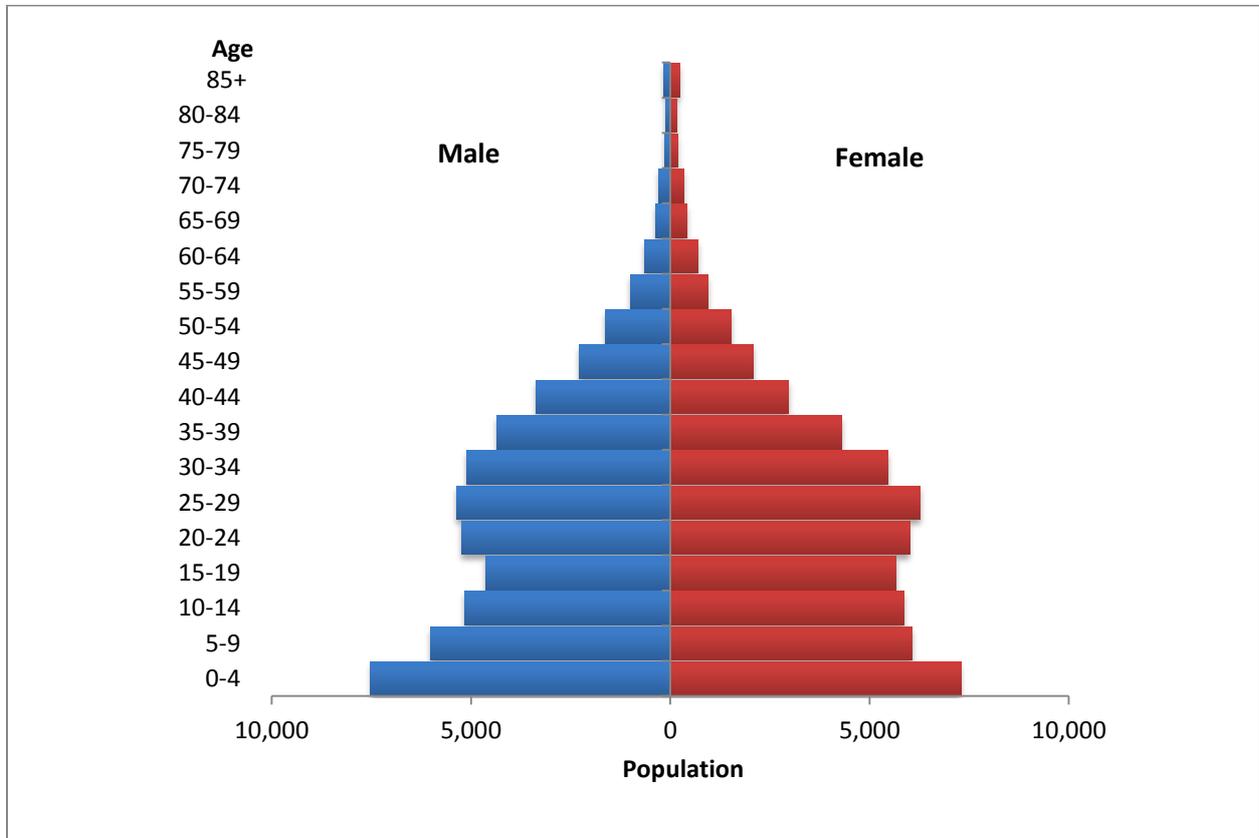

Age Group	Both Sexes		Male		Female		Sex ratio
	Number	Percent	Number	Percent	Number	Percent	
All Ages	109,864	100.0	53,376	100.0	56,488	100.0	94.5
0 - 4	14,807	13.5	7,518	14.1	7,289	12.9	103.1
5 - 9	12,087	11.0	6,019	11.3	6,068	10.7	99.2
10 - 14	11,016	10.0	5,153	9.7	5,863	10.4	87.9
15 - 19	10,289	9.4	4,629	8.7	5,660	10.0	81.8
20 - 24	11,238	10.2	5,234	9.8	6,004	10.6	87.2
25 - 29	11,645	10.6	5,368	10.1	6,277	11.1	85.5
30 - 34	10,566	9.6	5,109	9.6	5,457	9.7	93.6
35 - 39	8,648	7.9	4,343	8.1	4,305	7.6	100.9
40 - 44	6,338	5.8	3,376	6.3	2,962	5.2	114
45 - 49	4,365	4.0	2,279	4.3	2,086	3.7	109.3
50 - 54	3,145	2.9	1,628	3.1	1,517	2.7	107.3
55 - 59	1,941	1.8	988	1.9	953	1.7	103.7
60 - 64	1,332	1.2	645	1.2	687	1.2	93.9
65 - 69	802	0.7	373	0.7	429	0.8	86.9
70 - 74	628	0.6	296	0.6	332	0.6	89.2
75 - 79	344	0.3	144	0.3	200	0.4	72
80 - 84	286	0.3	121	0.2	165	0.3	73.3
85 +	387	0.4	153	0.3	234	0.4	65.3

## 2.3 Age and Sex structure

Table 2.1a presents the age structure of the population in the district. The age structure of the district as depicted by the pyramid presented in Figure 2.1 shows a broad base that gradually declines with increasing age. The broad base of the population pyramid indicates that the population of the district is very young. This means that a lot of resources are needed for the provision of schools, health care facilities and employment opportunities for the youth.

**Figure 2.1: Population pyramid depicting the age and sex structure**

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 2.3.1 Age Dependency Ratio

The dependency ratio in the district is 58.1% (Table 2.2). This means that on average for every 100 people aged 15-64 years, there are about 58 people depending on them for survival in the District. The table also shows that the child dependency ratio (54.5%) is higher than the old age dependency ratio (3.5%). The dependency ratio in rural areas (58.7%) is slightly higher than the dependency ratio in urban areas (58.0%). Table 2.2 further shows that 90.4 percent of the population are found in the urban areas whereas 9.6 percent of the population are in rural areas.

**Table 2.2: Age-dependency ratio**

Age Group	Both Sexes		Male		Female		Urban		Rural	
	Number	%	Male	%	Female	%	Number	%	Number	%
All Ages	109,864	100.0	53,376	100.0	56,488	100.0	99,271	100.0	10,593	100.0

## 2.4 Fertility, Mortality and Migration

### 2.4.1 Fertility

Fertility is a major component of population change. Table 2.2 displays fertility rates for all districts in the Greater Accra region. The Kpone-Katamanso District has a Total Fertility Rate (TFR) of 2.6 children per woman. The Total Fertility Rate of 2.6 is the same as the regional TFR.

**Table 2.3: Reported total fertility rate, general fertility rate and crude birth rate by district**

District	Population	Number of women 15-49 years	Number of births in last 12 months	Total Fertility Rate	*General Fertility Rate	**Crude Birth Rate
All Districts	4,010,054	1,203,838	91,077	2.6	75.7	22.7
Ga South Municipal	411,377	117,377	13,078	3.9	111.4	31.8
Ga West Municipal	219,788	64,817	5,783	2.9	89.2	26.3
Ga East Municipal	147,742	44,036	3,703	2.8	84.1	25.1

Ada West	59,124	14,236	1,642	4	115.3	27.8

Source: Ghana Statistical Service, 2010 Population and Housing Census

Note: \* Number of live births per 1,000 women aged 15-49 years

\*\* Number of live births per 1,000 population

However, the General Fertility Rate (GFR) and the Crude Birth Rate (CBR) for the district are 81.9 live births per 1,000 and 24.4 live births per 1,000 respectively both of which are higher than the regional average.

## 2.4.2 Children Ever Born

Children ever born and children surviving in the district are presented in Table 2.3. From the table, the number of children ever born increases with increasing age until age 34 and declines gradually up to age 59 years. This is expected as more children are born to women as they grow. The number of children surviving follows similar trend. Table 2.3 shows that 80.5 percent of females within the age group 15- 49 (reproductive age period) have given birth. Females aged 50 and above represent just 11.0 percent of the female population who have ever given birth. The highest number of children ever born (16.4%) and children surviving (16.9%) are recorded for the 35-39 age group of females.

**Table 2.4: Female population 12 years and older by age, children ever born, children surviving and sex of child**

Age	Females 12yrs+		Children Ever Born				Children Surviving			
	Number	Percent	Both sexes	Percent	Male	Female	Both sexes	Percent	Male	Female

## 2.4.3 Mortality

Mortality forms one important parameter in determining growth and change of population. Mortality analysis is useful in identifying viable health-related programmes to improve the lives of people and increase life expectancy. Mortality is measured using such indicators as the crude death rate and infant mortality. Table 2.5 shows that the district recorded 441 deaths which translate to a crude death rate of 4.0 per 1,000 population; this rate is slightly lower than the regional average of 4.3 deaths per 1,000 population.

**Table 2.5: Total population, deaths in households and crude death rate by district**

District	Total Population	Deaths in households	*Crude death rate
All Districts	4,010,054	17,363	4.3
Ga South Municipal	411,377	1,739	4.2
Ga West Municipal	219,788	727	3.3
Ga East Municipal	147,742	504	3.4
Accra Metropolis	1,665,086	7,276	4.4

Note: \* Number of deaths per 1,000 population

#### 2.4.4 Age Specific Death Ratio by Sex

Figure 2.1 shows that the death ratio for the young age group, 5-9 years, is very high in the district; this could be attributed to the infants been more prone to diseases. However, from the ages 10-24 the death rate is stable for both males and females. From age 25, the death rate begins to increase at an increasing rate with more female deaths than male deaths. From age 55 to 70 and above the death rate is very high among both sexes due to old age, frailty and sickness. Male death rate at this stage is higher than for females.

**Figure 2.2: Age specific death ratio by sex**

Source: Ghana Statistical Service, 2010 and Housing Census

#### 2.4.4 Causes of death

The 2010 PHC shows that the Kpone Katamanso is less likely to have accident/violence/homicide/suicide related deaths as compared to most districts in the Greater Accra Region. In Table 2.8, out of the total number of 441 deaths recorded in the District, 12.0 percent of the deaths occurred through accident/violence/homicide/suicide is lower than the regional average of 12.5 and 88.0 percent of deaths occurred through other causes.

**Table 2.6: Causes of death by district**

District	Total deaths	Death due to			
		Accident/ violence/ homicide /suicide		All other causes	
		Number	Percent	Number	Percent
All Districts	17,363	2,166	12.5	15,197	87.5

#### Migration

The 2010 PHC measured migration with respect to place of birth as shown in Table 2.4. Out of the total population of 109,864 in the district, 70.4 percent are migrants. Table 2.4 also shows that a greater proportion (40.2%) of the migrants have resided in the district for 1-4 years, while 18.5 percent of the migrants have resided in the municipality for less than one year. Of the migrants who have come from other regions, the biggest share is from Volta (23.4%), Eastern (15.9%) and Central (10.2%).

**Table 2.7: Birth place by duration of residence**

Birthplace	Number	Percent	Duration of residence (%)				
			Less than 1 year	1-4 years	5-9 years	10-19 years	20+ years
Total	77,328	100.0	18.5	40.2	20.4	13.0	8.0

# CHAPTER THREE

## SOCIAL CHARACTERISTICS

### 3.1 Introduction

The social characteristics of a population are important parameters in every demographic analysis. It has significant effects on the social policies and development plans of every nation. The size of a nation's population is an aggregation of individual household members in the nation. This chapter provides a descriptive summary of the social characteristics of the population using the 2010 Population and Housing Census data.

### 3.2 Household Composition and Structure

#### 3.2.1 Household Size

Table 3.1 provides information on household size by locality in the Kpone Katamanso District. The District has a household population of 106,398 with a total number of 26,800 households. The average household size for the District is 4.0 persons per household. The average household per house is 1.7 with rural dwellers having a higher proportion of households per house than urban dwellers. However, average household size the same for both rural and urban areas.

**Table 3.1: Household size by locality**

Categories	Total country	Region	District	Urban	Rural
Total household population	24,076,327	3,888,512	106,398	96,150	10,248
Number of households	5,467,054	1,036,370	26,800	24,190	2,610
Average households per house	1.6	2.2	1.7	1.7	2.1
Average household size	4.5	3.9	4.1	4.1	4.1

Source: Ghana Statistical Service, 2010 Population and Housing Census

#### 3.2.2 Household Composition

Table 3.2 shows that of the total household composition, children constitute the highest proportion (38.4%) with the proportion of children in male-headed households (39.2%) slightly higher than their female counterparts (37.7%). Table 3.2 further shows that 25 percent of the household members in the district are heads of households, with 34.4 percent of males being heads of the household and 16.6 percent of females. The percentage difference between the male headship and female headship in terms of composition is 17.7 percent; this shows there is a higher proportion of male-headed households in the district. Additionally, males who are spouses to female heads, constitute 3.6 percent; this figure is relatively low as compared to females who are spouses to male heads (21.7%). This observation reflects the dominance of males as heads of households consistent with the traditional patrilineal family systems and Christian teachings prevalent in the district. Other household members include non- relatives (2.9%), parent in-law (0.9 %) and son/ daughter in-law (0.4%).

**Table 3.2: Household population by composition and sex**

Household composition	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	106,398	100.0	51,529	100.0	54,869	100.0
Head	26,800	25.2	17,704	34.4	9,096	16.6
Spouse (wife/husband)	13,371	12.6	1,831	3.6	11,540	21.0
Child (son/daughter)	40,857	38.4	20,182	39.2	20,675	37.7
Parent/Parent in-law	916	0.9	197	0.4	719	1.3

Non-relative	3,054	2.9	1,617	3.1	1,437	2.6

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 3.2.2 Household Structure

Table 3.3 shows that the dominant Household structure (30.4%) of the household population in the district is the nuclear family (Head, spouse(s) and children) with 31.6 percent male-headed households and 29.2 percent of their female counterparts have this family system. About one quarter (24.1%) of the population practise the extended family system. The extended family system (head, spouse(s), children and head's relatives) constitute the second highest proportion (21%) of the household structures with male and female households reporting almost equal proportions (21%). Significant proportions of the structure consist of single parent Extended (12.9%) and single parent nuclear households.

**Table 3.3: Household population by structure and sex**

Household structure	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	106,398	100.0	51,529	100.0	54,869	100.0
Head only	4,516	4.2	3,133	6.1	1,383	2.5
Head and a spouse only	2,992	2.8	1,501	2.9	1,491	2.7

Head and other composition but no spouse	11,064	10.4	5,940	11.5	5,124	9.3

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 3.3 Marital Status

Generally, marriage in Ghana is recognized as a union between a man and a woman with the knowledge of both families. In Ghana, the purpose of marriage is to provide companionship for the couple, the means to offer support for each other, and a legitimate avenue for sexual satisfaction and reproduction. Marriage includes formal unions that are legal, traditional or religiously sanctioned, and informal cohabitating unions. The 2010 Census collected information on the marital status of persons from age 12 years and above.

#### 3.3.1 Marital Status 12 years and above

Table 3.4 shows marital status of population 12 years and older in the district. The never married population constitute a higher proportion (43%) of the total population 12 years and older. The married population constitute the second highest proportion (42%) of the population 12 years and older in the district. The proportion of the population in informal and consensual unions is 8 percent. The lowest proportions of marital status categories are the separated and the divorced constituting 2 percent each.

The table also reveals that the proportion of the population that is married increases with increasing age. Thus, from age group 12-14, 7.2 percent of the population in this group is married and this proportion of married people increases till it peaks at the age group, 40 to 44 where 74.3 percent are married. There after the proportion of the population that is married declines steadily. From the age group, 40-44 it is observed that the proportion of the population that is widowed begins to increase. These observations stated above are generally true for both males and females (refer to Table 3.4).

**Table 3.4: Persons 12 years and older by sex, age-group and marital status**

Source: Ghana Statistical Service, 2010 Population and Housing Census

The two age groups, 12 to 14 and 15 to 19, constitute 91.8 percent each of the proportion of the never married population in their respective groups. For informal/consensual unions, the age group, 25 to 29 years has the highest proportion of this category of marital status (13.6%).

The male never married population constitutes the highest proportion of the total male population (45.8%) as compared to 39.4 percent for the female population. Majority (50.2%) of the females aged 65 years and older are widowed while only 8.2 percent for the males reflecting the lower life expectancy for males as compared to females.

### 3.4 Marital Status and Education

More than half (56.6%) of the various persons in the marital categories (12 years and older) have attained basic education in the district. The link between educational level and marital status is very evident from the Table 3.5. As shown in Table 3.5, the proportions that have attained tertiary level of education constitute just 2 percent of the divorced proportion as against 59.2 percent for those in the basic level. However, out of the total population 12

years and above, 5 percent are tertiary graduates who are married, while 54.8 percent are basic level graduates.

Those who are in informal consensual union constitute the highest proportion (64.6%) of the total population 12 years and above with basic level education. The male population exhibits the same characteristics where the informal consensual union group forms the highest proportion (62.0 %) with basic education with a proportion reported for females (66.9%).

### 3.5 Marital Status and Economic Activity

Table 3.6 gives information on persons 12 years and older by sex, marital status and economic activity status. About 41.4 percent of those who have never been married are employed with 6.9 percent unemployed and 51.7 percent economically not active. The majority of those who are married and in informal/consensual unions, almost equal proportions (81.7%) and (81.8%), are employed while 11.2% and 13.6% respectively are economically not active.

Among those who are separated or divorced, about four out of five persons (79.7%) and (77.8%) of them are employed while 5.0% and 7.1% are unemployed. Close to six out of 10 persons who are widowed ((57.6%) are employed with 3.1% unemployed, and nearly 40 percent economically not active. There are no significant differences between males and females in the various categories of the marital status.

**Table 3.6: Persons 12 years and older by sex, marital status and economic activity status**

### 3.6 Nationality

Nationality is defined as the country to which a person is born. As shown in Table 3.7, 95.5 percent of the population in the district are Ghanaians by birth, with 2.1 percent Ghanaians of dual nationality. Further, 0.6 percent of the population in the district are Ghanaians by Naturalisation while 1.1 percent are of ECOWAS origin, 0.4 percent are Africans other than ECOWAS nationals. The rest 0.3 percent are from other countries. The table further shows that over 90 percent of both males and females in the district are Ghanaians by birth.

**Table 3.7: Population by nationality**

Nationality	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	109,864	100.0	53,376	100.0	56,488	100.0
Ghanaian by birth	104,877	95.5	50,890	95.3	53,987	95.6

### 3.7 Religious Affiliation

Table 3.8 indicates that the vast majority of people in the municipality are Christians of various denominations (88.2%). Pentecostals and Charismatics form the majority of Christians accounting for with 50.2 percent of the entire population. Followers of Islam are the second largest group accounting for 7.2 percent of the population. Followers of traditional religions constitute only 0.5 percent of the population. The gender analysis shows that higher proportions of Christians are females for all categories except the “other” subgroup. However, there are higher male proportions for Muslims and traditional African religion followers than their female counterparts. Further, the number of males who profess no religion is just slightly over twice the number of females for that category.

**Table 3.8: Population by religion and sex**

Religion	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	109,864	100.0	53,376	100.0	56,488	100.0

### 3.8 Literacy and Education

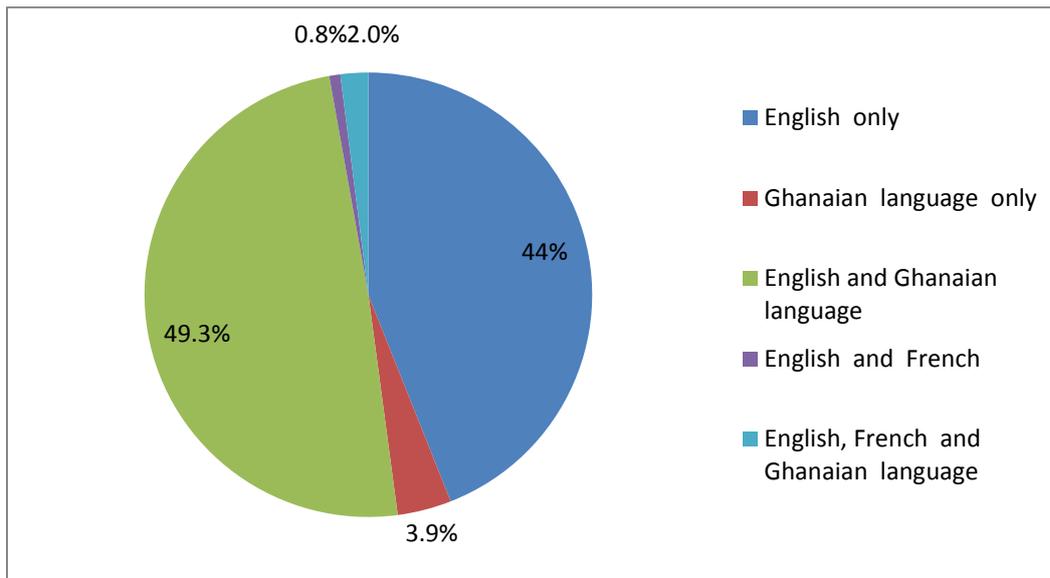

Table 3.9 and Figure 3.1 show that out of the total literate population 11 years and older, 49.3 percent can read and write English and Ghanaian language only, while and 44.0 percent are literate in English only and 3.9% literate in a Ghanaian language only. Two percent of the population are literate in English, French and Ghanaian language. The age group 11-14 has the highest proportion (58.6%) literate in English only. Those aged 60-64 record the highest proportion (63.0%) of the population literate in English and Ghanaian language. Literacy in French and English is relatively high (1.2%) among the age group 15-19.

**Table 3.9: Population 11 years and older by sex, age and literacy status**

### 3.9 Education

Out of the total population, 3 years and older in the district who are currently attending school, 43 percent of them are in the basic school (refer to Table 3.10). Those in JSS/JHS represent 17.5 percent of the population while those attending SSS/SHS and Tertiary institutions constitute 10.9 percent and 4.5 percent respectively. About 42.9 percent of all males are attending primary school compared to a relatively higher 43.8 percent of females attending primary school. From Table 3.9 it can be observed that there are higher proportions of females than males attending post-primary schools for all categories except tertiary schools and SSS/SHS. Even for SSS/SHS category the proportion is the same for both females and males. These results reflect an increasing prioritization of the girl-child education in the municipality.

Considering past school attendance, 12.8 percent of the population have completed primary school. More people have attained JSS/JHS level (28.8%) followed by those who have attended middle school (20.9%) and SSS/SHS (14.8%). There are more females (32%) who have attended JSS/JHS in the past as compared to males (26%). On the other hand, there are more males (12.7%) who have attended tertiary institutions than females (6.3%). The picture for past attendance of schools reveals a mixed picture with regards to sex with females having higher completion rates for selected schools such as primary and JSS/JHS but relatively lower completion rates from secondary school level and above.

**Table 3.10: Population 3 years and older by level of education, school attendance and sex**

## CHAPTER FOUR

### ECONOMIC CHARACTERISTICS

#### 4.1 Introduction

The nature, size, type and composition of the labour force are useful indicators in assessing the productivity involved in the production of goods and services. Therefore, it is necessary for the District to know its economic characteristics for informed decision making. The involvement of the labour force in employment is also a key indicator for economic growth. This chapter analyses the 2010 PHC data on the economic activity status of the population in the district.

#### 4.2 Economic Activity

##### 4.2.1 Economic activity status and sex

Table 4.1 shows the population 15 years and older by their economic activity status and sex. The Census results indicate that those aged 15 years and older form 65.5 percent of the total population in the district. Table 4.1 and Figure 4.1 show that about three-quarters (75.1%) of the population 15 years and older are economically active whereas about one-quarter (24.9%) are economically not active.

**Table 4.1: Population 15 years and older by activity status and sex**

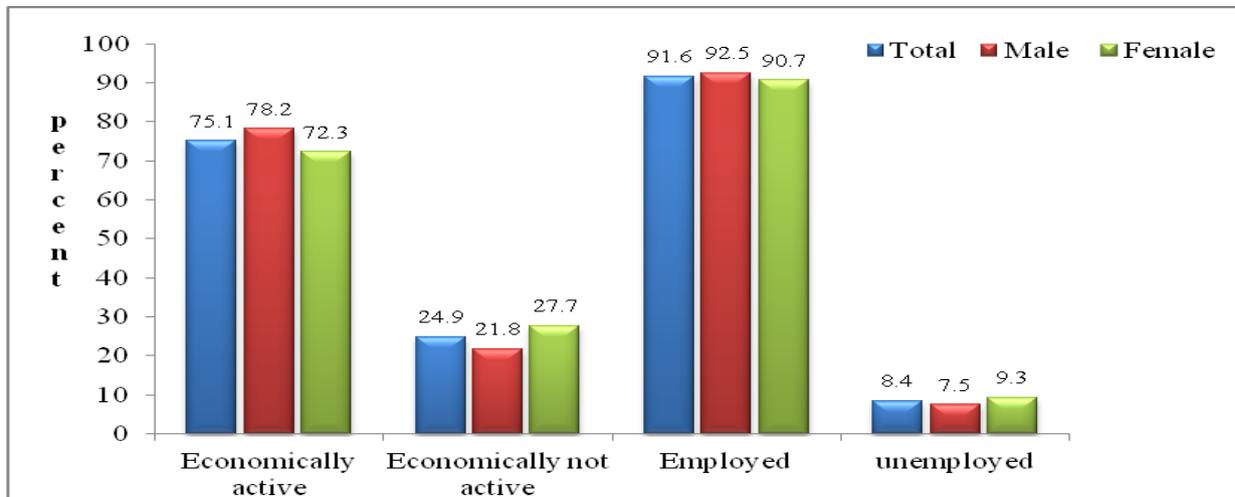

Activity status	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
<b>Total</b>	71,954	<b>100.0</b>	34,686	<b>100.0</b>	37,268	<b>100.0</b>
<b>Economically active</b>	<b>54,045</b>	<b>75.1</b>	<b>27,115</b>	<b>78.2</b>	<b>26,930</b>	<b>72.3</b>
<i>Employed</i>	<b>49,518</b>	91.6	<b>25,087</b>	92.5	<b>24,431</b>	90.7
<i>Worked</i>	47,725	96.4	24,444	97.4	23,281	95.3
<i>Did not work but had job to go back to</i>	1,717	3.5	606	2.4	1,111	4.5
<i>Did voluntary work without pay</i>	76	0.2	37	0.1	39	0.2
<i>Unemployed</i>	4,527	<b>8.4</b>	2,028	<b>7.5</b>	2,499	<b>9.3</b>
<i>Worked before, seeking work and available</i>	2,177	48.1	882	43.5	1,295	51.8
<i>Seeking work for the first time and available</i>	2,350	51.9	1,146	56.5	1,204	48.2
<b>Economically not active</b>	17,909	<b>24.9</b>	7,571	<b>21.8</b>	10,338	<b>27.7</b>
Did home duties (household chore)	4,253	23.7	972	12.8	3,281	31.7
Full time education	9,551	53.3	4,686	61.9	4,865	47.1
Pensioner/Retired	776	4.3	525	6.9	251	2.4
Disabled/Sick	460	2.6	191	2.5	269	2.6
Too old/young	1,119	6.2	337	4.5	782	7.6
Other	1,750	9.8	860	11.4	890	8.6

Source: Ghana Statistical Service, 2010 Population and Housing Census

Of the economically active population, 91.6 percent are employed and 8.4 percent are unemployed. It is observed that among the unemployed population, more than half (51.9%) are seeking for work for the first time. Overall, the proportion of males who are economically active (78.2%) is higher than the proportion of females who are economically active (72.3%). The proportion of economically active males who are employed (92.5%) is slightly higher than the corresponding proportion for economically active females (90.7%). Hence the unemployment rate was slightly lower for males (7.5%) than for females (9.3%).

More than half (53.3%) of the economically not active population are into full time education and less than one-quarter (23.7%) are homemakers. The proportion of the female population 15 years and older who are economically not active (27.7%) is higher than the corresponding proportion for economically not active males (21.8%). This is related to the dominant role played by females in homemaking duties as compared to males.

**Figure 4.1: Population 15 years and older by sex and activity status**

Source: Ghana Statistical Service, 2010 Population and Housing Census

Table 4.2 shows that the 35-39 years group has the highest employed proportion (89.2%). This is followed by the 40-44 years age group. The lowest proportion is attributed to the 15-19 years group (19.2%). The population aged 20-24 years have the highest unemployed proportion (11.6%) followed by the 25-29 years age group with an unemployed proportion of 9.6 percent. Hence people aged between 20 to 29 years are more likely than others to be unemployed.

It is observed that more than three-quarters (76.7%) of the 15-19 age group and more than half (58.2%) of the population 65 years and older are economically not active. This result is expected as the youth are supposed to either be in school or learning a trade and also the elderly (65 years+) to be too old to work (Table 4.3).

In terms of sex, the highest proportions of employed males are aged between 25 and 59 years, however, the highest proportions of employed females are aged between 30 and 54 years. Among the males, persons aged 20-29 years have the highest unemployed population whereas persons aged between 20 and 34 years have the highest unemployed population for females.

**Table 4.2: Economic activity status of population 15 years and older by sex and age**

### 4.3 Occupation

Table 4.3 gives information on the employed population 15 years and older by occupation and sex. Service and sales workers constitute the largest group (31.2%) of the employed population in the district. This is followed by Craft and related trades workers that constitute 23.2 percent of the total employed population. The third largest group is made up of workers engaged in elementary occupations. Skilled Agricultural Forestry and Fishery workers are only 4.1 percent of the employed population. Furthermore, clerical support workers are 2.6 percent of the employed population. Females (48.9%) are three times more likely than males (14.0%) to be engaged in Service and Sales work. However, the proportion of males (28.2%) engaged in Craft and related trades work is higher than that of females (18.1%).

**Table 4.3: Employed population 15 years and older by occupation and sex**

Occupation	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent

#### 4.4 Industry

Information on the employed population 15 years and older by industry and sex is shown in Table 4.4. The most popular industries based on the proportion of the employed working in that sub-sector are wholesale and retail, repair of motor vehicles and motorcycles (28.8%), manufacturing (19.5%) and transportation and storage (10.3%). Accommodation and food service activities and other service activities also employ 7.2 percent and 6.3 percent of the employed population respectively. Only 5.2 percent of the employed population are engaged by agriculture, forestry and fishing industry.

In terms of sex, higher proportions of employed males (7.1%) than employed females (3.3%) work in the agriculture, forestry and fishing industry; again there is a higher proportion of males (18.8%) engaged in transportation and storage industries than the corresponding proportion for females (1.6%). On the contrary, a higher proportion of employed females is in the wholesale and retail, repair of motor vehicles and motorcycles group of industries (41.6%) than males (16.4%). Further, 13.0 percent of females work in the accommodation and food service activities industry compared to only 1.5 percent of males who work in that industry.

**Table 4.4: Employed population 15 years and older by industry and sex**

Industry	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent

## 4.5 Employment Status

Table 4.5 show that the majority (53.2%) of the people in the district are self-employed (46.0% are without employees and 7.2% are with employees). The next most populace group is employees (36.9%). Apprentices constitute 3.3 percent of the total employed people while 3.1 percent and 2.9 percent of the employed are casual workers and contributing family workers respectively. A much higher proportion of employed females (62.6%) than males (29.8%) are self-employed without employees. On the other hand, a higher proportion of males (52.1%) are employees compared to the proportion of females who are employees (21.2%).

**Table 4.5: Employed population 15 years and older by employment status and sex**

Employment Sector	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	49,518	100.0	25,087	100.0	24,431	100.0
Employee	18,256	36.9	13,077	52.1	5,179	21.2
Self-employed without employee(s)	22,770	46.0	7,466	29.8	15,304	62.6

## 4.6 Employment Sector

Table 4.6 show the employment sector of the people in the district. The private informal sector employs the majority (70.5%) of the employed population followed by the private formal (20.7%). Together the private sector employs 91.2 percent of the employed population in the district. The public sector employs only 7.7 percent of the employed. Local and international NGOs employ 1.1% of the total employed force. About 83.1 percent of females work in the private informal sector compared to just 58.3% of males engaged in that sector. However, the formal private sector is dominated by males with the number of females employed constituting only 38.2 percent of the number of male workers in that sector. In a similar fashion, government employment is dominated by male workers.

**Table 4.6: Employed population 15 years and older by employment sector and sex**

Employment Sector	Both sexes		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	49,518	100.0	25,087	100.0	24,431	100.0
Public (Government)	3,683	7.4	2,576	10.3	1,107	4.5

# CHAPTER FIVE

## INFORMATION COMMUNICATION TECHNOLOGY

### 5.1 Introduction

This chapter provides information on the ownership, usage and accessibility of ICT facilities including mobile phones, desktop/laptop computers and internet in the district. It has been developed due to the growing importance of ICT in the economic development of the country.

### 5.2 Ownership of Mobile Phones

Table 5.1 shows that 73.1 percent of the persons 12 years and above own mobile phones in the district. About 77.6 percent of males 12 years and older own mobile phones compared to 68.9 percent of females 12 years and older. Hence it can be argued that mobile phone ownership is higher for males than females.

### 5.3 Use of Internet

Table 5.1 shows that only 16.7 percent of the population aged 12 years and older use the internet indicating an overall low level of internet usage in the district. The proportion of males who use the internet is 22.1 percent almost twice the proportion of females who use the internet (11.7%).

**Table 5.1: Population 12 years and older by mobile phone ownership, internet facility usage and sex**

Sex	Population 12 years and older		Population having mobile phone		Population using internet facility	
	Number	Percent	Number	Percent	Number	Percent
Total	78,265	100	57,188	73.1	13,053	16.7
Male	37,577	48	29,145	77.6	8,288	22.1
Female	40,688	52	28,043	68.9	4,765	11.7

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 5.4 Household Ownership of Desktop/Laptop Computers

Table 5.2 provides information about household ownership of desktop/laptop computers and the sex of household head. Of the total households, 15.4 percent own a desktop or a laptop. Among male-headed households 17.4 percent have either desktop or a laptop computer compared to only 11.6 percent of female-headed households which own desktop or laptop computers. This result indicates a gender disparity with the ownership of computers and is a factor explaining the relatively lower usage of internet by females compared to males as computer ownership is a key driver for the use of internet.

**Table 5.2: Households having desktop/laptop computers by sex of household head**

Sex	Number of households		Households having desktop/laptop computers	
	Number	Percent	Number	Percent
Total	26,800	100	4,134	15.4
Male	17,704	66.1	3,083	17.4
Female	9,096	33.9	1,051	11.6

# CHAPTER SIX

## DISABILITY

### 6.1 Introduction

Persons with disabilities (PWD) are defined as those who are unable to or are restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation (Ghana Statistical Service, 2012). In recent time, there has been a great effort in policy initiatives directed towards the marginalized and excluded so as to improve their wellbeing together with the rest of the population.

In an effort to promote the contribution of people living with disability, the Ghana Statistical Service collected detailed data on PWD in the 2010 Population and Housing Census. This effort was to help know improve the plight of PWD through evidence-based policy measures.

### 6.2 Population with Disability

Table 6.1 shows the population by type of locality, disability type and sex in the district. Out of total population of 109,864 in the district, 2020 are disabled (1.8%). Sight impairment is the most common type of disability affecting 31.2 percent of the disabled in the district. The other types of disability include physical (30.1%), emotional (25.1%); speech (22.2%), intellectual (16.5%) and hearing (9.6%). The male proportion of the total disabled is the same as the female proportion (1.8%).

While overall disability proportion is the same between the two sexes, the proportions for specific disabilities between the sexes vary. Thus, people with sight disability accounts for 32.7 percent of all female disabled compared to the corresponding proportion of 29.7 percent for males with sight disability. Hearing disability related to physical and hearing are proportionally higher in male disabled than in female disabled. For the other types of disability, females have higher proportions than males (refer to Table 6.1).

**Table 6.1: Population by type of locality, disability type and sex**

### **6.3 Type of Disability**

As indicated earlier from Table 6.1, shows that sight is the most common type of disability (31.2%) in the district. The other types of disability include physical (30.1), emotional (25.1%); speech (22.2%), intellectual (16.5%), hearing (9.6%) and other types of disability constitute 24.0 percent.

Of persons with disability with regards to sex, it is observed that the least prevalent among the sexes is hearing disability with the proportion for males (10.5%) higher than females (8.8%). The proportion of sight disability in females (32.7%) is higher than the other types of disabilities. Proportionally, the disability with the same proportion between the two sexes is speech; 22.1 percent for males and 22.3 percent for females.

### **6.4 Disability by Locality**

The differences in the location of disabled people exist in the district based on rural/urban divide (refer to Table 6.1). Disabled people as a proportion of the population is 1.9 percent in urban areas (1901 people) compared to the proportion of 1.1 percent in rural areas (119 people). Clearly, there is a higher proportion of disabled in urban compared to rural areas. This could be partly due to better employment and social welfare opportunities in urban areas compared to rural areas. The commonest form of disability in rural areas is physical disability whereas the commonest form of disability in urban areas is sight disability. The least common disability in both rural and urban areas is hearing disability.

### **6.5 Disability and Economic Activity**

Out of 1,533 persons with disability in the population, 55.4 percent are employed, 4.8 percent are not employed while 39.8 percent are economically not active (refer to Table 6.2). For people who are not disabled, 69.1 percent are employed, 6.3 percent are unemployed and 24.6 percent are economically not active. Hence it is clear that disabled people are less employable than people who are not disabled. Further, disabled people are more likely to be economically not active not necessary because they are homemakers or students but could also be due to their disabilities themselves. Disabled people with other impairment and speech impairment have the highest rates of employment among the disabled while those with sight impairment have the highest rate of economically not active people among the disabled. It is obvious that severe sight impairment is more likely to lead to a non-active status related to employment due to the critical role of proper sight in performing many functions required by various employers. This observation is similar between the two sexes where it is clear from Table 6.2 that people with other disability are the most employable.

## 6.6 Disability, Education and Literacy

For people with disabilities aged three and older, a total of 1,913 are in this subgroup of disabled. Among these people, 323 have never attended school while the rest have completed some form of schooling (refer to Table 6.3). Persons with sight disability are more likely to have completed higher levels of education compared to the rest of the disabled subpopulation. Of disability level of education with regards to sex, proportionally, the males are more likely to attain higher levels of education than females.

**Table 6.3: Population 3 years and older by sex, disability type and level of education**

## CHAPTER SEVEN

### AGRICULTURAL ACTIVITIES

#### 7.1 Introduction

Agriculture continues to be a major sector of the economy of Ghana despite the decreasing proportion of the economically active people being engaged in the sector. Overall, the sector engages many people giving them livelihood opportunities. This observation is much more evident in rural districts than urban districts. This chapter provides some information on agricultural activities in the Kpone-Katamanso District.

#### 7.2 Households in Agriculture

Table 7.1 and Figure 7.1 show that among the households, only 8.3 percent (2,228) are engaged in agricultural activities.

**Table 7.1: Households by agricultural activities and locality**

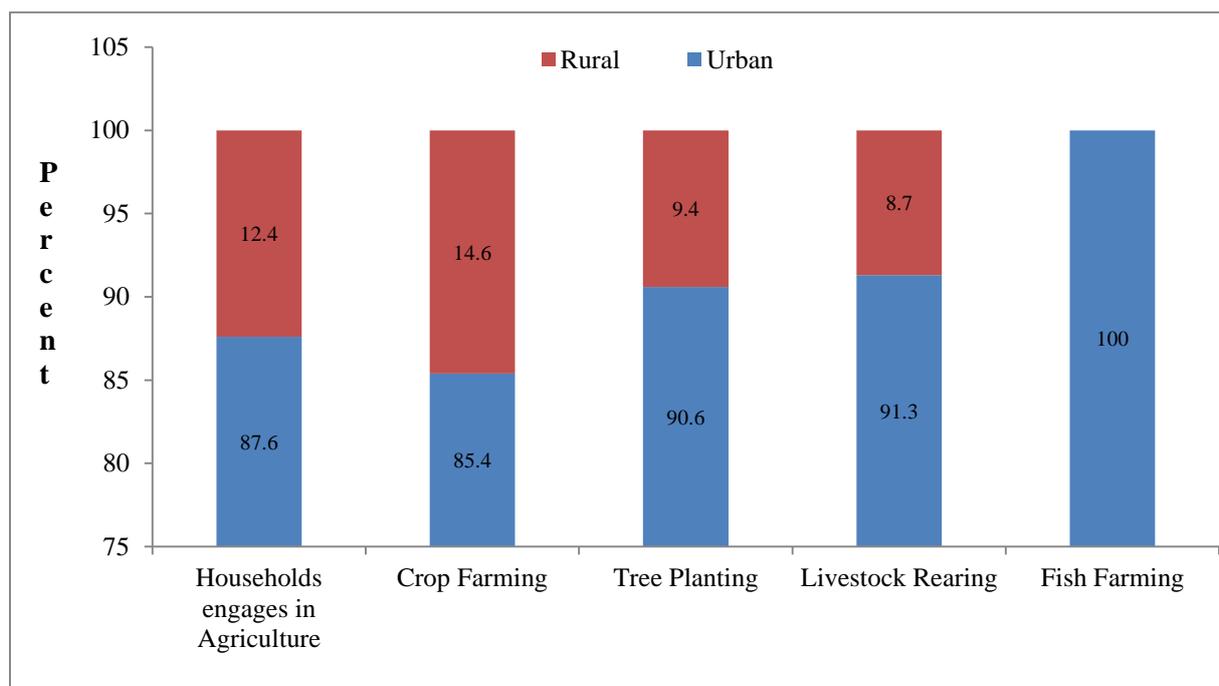

Agricultural Activities	Total		Urban		Rural	
	Number	Percent	Number	Percent	Number	Percent
Total Households	26,800	100.0	24,190	100.0	2,610	100.0
Households not engaged in Agriculture	24,572	91.7	22,239	91.9	2,333	89.4
Households engaged in Agriculture	2,228	8.3	1,951	8.1	277	10.6

Fish Farming	1	0.0	1	0.1	0	0.0

Source: Ghana Statistical Service, 2010 Population and Housing Census

##### 7.2.1 Type of farming

Of the households in agriculture, 62.5 percent produce crops, 45.0 percent are involved with livestock rearing and only 1.4 percent of households are into tree planting (Figure 7.1). It can be observed that 87.6 percent of households in the urban locality undertake some agricultural activities compared to only 12.4 percent of households in rural localities. Of the agricultural activities undertaken by households, livestock rearing is the most common for urban households while crop farming is the most popular for rural households (refer to Figure 7.1).

**Figure 7.1: Households engaged in agricultural activities by locality**

Source: Ghana Statistical Service, 2010 Population and Housing Census

### **7.3 Distribution of livestock and other animals reared**

Table 7.2 shows the distribution of livestock, other animals and keepers. The total number of animals kept in the district is 54,495 and the number of keepers is 1,359 with an average number of animals per keeper being 40. Table 7.2 shows that, the most common reared animal by households is chicken (55.3%). This is followed by cattle (15.4%), goats (10.6%), sheep (6.9%) and pig (5.5%). Only one household is engaged in fish farming in the district.

**Table 7.2: Distribution of livestock, other animals and keepers**

Livestock/other animal	Animals		Keepers		Average Animal per Keeper
	Number	Percent	Number	Percent

## CHAPTER EIGHT

### HOUSING CONDITIONS

#### 8.1 Introduction

In 2010, the policy framework of the Government of Ghana, the Ghana Shared Growth and Development Agenda, emphasized the need for increased access of the population to safe, adequate and affordable housing and shelter (National Development Planning Commission, 2010). Earlier frameworks also underscored the important role of housing in social development. For example, in the Ghana Poverty Reduction Strategy (2003 – 2005) policy framework, housing interventions were prescribed implicitly within the context of social development objectives (National Development Planning Commission, 2002). The achievement of these objectives was linked partially to the provision of safe water supply and sewerage and improved housing. The provision of information on housing and housing conditions is therefore important both to assess what has been achieved and to plan ahead. In this chapter, data on stock of houses, facilities and amenities of houses in the 2010 Population and Housing Census are analyzed at the district level.

#### 8.2 Stock of Houses and Households by type of Locality

The 2010 population and housing census counted 15,801 houses in the district constituting 22 percent of all houses in the region (Table 8.1). The average household per house in the district is 1.7 as compared to 2.2 in the region. The rural average household per house (2.1) is higher than the urban average of 1.7(refer to Table 8.1)

As shown in Table 8.1, the mean number of persons per house in the district is 7.0. However, the mean number of persons per house in the rural areas is 8.4 as compared to 6.8 in the urban areas. The district has an average household size of 4.1 with the same value reported for both rural and urban areas.

**Table 8.1: Stock of houses and households by type of locality**

Category	Total				
	country	Region	District	Urban	Rural
Total population	24,658,823	4,010,054	109,864	99,271	10,593

Average household size	4.5	3.9	4.1	4.1	4.1

Ghana Statistical Service, 2010 Population and Housing Census

### 8.2.1 Ownership status of dwelling by sex of household and type of locality

Table 8.2 shows the ownership status of dwellings by households in the district. More than two-fifths of the dwellings in the district are owned by a household member (45.3%). About 39 percent of the dwellings are owned by private individuals; private employers constitute only 1.1 percent of owners of dwellings in the district. The proportion of dwellings owned by the government is 3.8 percent. For both male-headed and female-headed households, the commonest form of ownership of dwellings is by a household member, with almost equal proportions of 45.1 percent and 45.6 percent for male-headed and female-headed households respectively. The differences in urban-rural ownership proportions are not high across the types of owners except for public/government ownership where the dwellings are largely in urban areas (4.1% in urban areas compared to 0.2% in rural areas).

**Table 8.2: Ownership Status of dwelling by sex of household and type of locality**

Ownership status	Total country	Region	District					
			Total		Male headed	Female headed	Urban	Rural
			Number	Percent				
<b>Total</b>	5,467,054	1,036,370	26,800	100.0	100.0	100.0	100.0	100.0

### 8.3 Type of Dwelling, Holding and Tenancy

Table 8.3 shows that the commonest type of dwelling units occupied by households in the district is the compound house which is the home of 48 percent of the households. This is followed by separate houses (26.4%), semi-detached houses (8.7%), improvised homes/kiosks (7.1%), uncompleted buildings (5.0%), flat/apartment (3.2%), and four other categories all accounting for 1.8 percent.

More than half (51.4%) of the female-headed households occupy compound houses compared to 45.6 percent of male-headed households. In rural areas, the compound house is more popular with 57.6 percent of households patronising this type of dwelling compared to the corresponding proportion of 46.5 percent in urban areas. Flat/apartment is more than three times (3.5%) more likely to be found in urban areas as compared to rural areas (1.0%). Uncompleted building used as a dwelling is twice more popular (5.2%) in urban areas as compared to rural areas (2.6%). Tents are not commonly used by households with only 0.2% of households in both rural and urban areas using tents as a dwelling.

**Table 8.3: Type of occupied dwelling unit by sex of household head and type of locality**

Type of dwelling	Total country	Region	District

## 8.4 Construction Materials

### 8.4.1 Main construction material for outer wall of dwelling unit by type of locality

Table 8.4 shows majority (83.1%) of the dwellings in the district have the outer wall constructed with cement block/concrete. One in eight dwellings has wooden walls and 1.9 percent of dwellings have walls made of mud bricks. Landcrete is the least popular material used for the outer walls with only 0.1 percent of dwellings with such material used for their outer walls.

The rural areas in the district have higher proportion (85.6%) of buildings with cement/concrete outer walls as compared to similar buildings in the urban areas (82.9%). The use of wood as the main construction material for outer walls of dwellings is higher (12.2%) in urban areas than rural areas (9.7%). However, surprisingly, all the dwellings with palm leaf/thatch/raffia as outer wall (0.3%) are found in urban areas with none located in rural areas (refer to Table 8.4).

**Table 8.4: Main construction material for outer wall of dwelling unit by type of locality**

Material for Outer wall	Total country	Region	District			
			Total		Urban	Rural
			Number	Percent

### 8.4.2 Main construction materials for the floor of dwelling unit by type of locality

Table 8.5 shows the main construction material for the floor of the dwelling unit by type of locality in the district. Out of the total number of dwelling units, most dwellings (84.9%) in the district have the main construction material for the floor to be cement/concrete. The dwellings with floors made of ceramic/porcelain material constitute 4.2 percent of the total number of dwellings in the district.

**Table 8.5: Main construction materials for the floor of dwelling unit by type of locality**

Materials for the floor	Total country	Region	District			
			Total		Urban	Rural
			Number	Percent		
Total	5,467,054	1,036,370	26,800	100.0	100.0	100.0

Source: Ghana Statistical Service, 2010 Population and Housing Census

About 88.1% of dwellings in rural areas have their floors made of cement or concrete compared to 84.5 percent of floors in urban areas. However, the urban areas have larger proportions of dwellings using vinyl tiles (3.3%) and ceramic/porcelain (4.2%) as materials for the floor compared to rural areas where the corresponding proportions are 1.1 percent and 4.0 percent for vinyl tiles and ceramic/porcelain respectively.

### 8.4.3 Main construction material for roofing of dwelling unit by type of locality

Table 8.6 shows that the two main materials for roofing dwelling units the district are metal sheet (68.5%) and Slate Asbestos (25.9%). A few houses (2.9 %) have cement/concrete roofing. There are no marked differences in the popularity of roofing materials used in the roofing of dwellings in the urban and rural areas of the district. For example, the use of metal sheets for roofing is only slightly higher in urban areas (68.7%) compared to (66.5%) in rural areas. Similarly, the use of asbestos/slates as roofing material is only slightly higher in rural (28.4%) than urban localities (25.7%). The proportion of dwellings with thatch or palm leaves as the main roofing materials is the same in rural areas (6.1%) as in urban localities (6.1%).

**Table 8.6: Main construction material for roofing of dwelling unit by type of locality**

## 8.5 Household Size and Room Occupancy

Table 8.7 shows the relationship between household size and number of sleeping rooms. Almost six in 10 households (59.6%) in the district have one sleeping room, 27.2 percent have two sleeping rooms, 8.2 percent have three sleeping rooms and 4.7 percent have four sleeping rooms. The proportion of households in the district having five or more sleeping rooms is just 2.9 percent. The problem of overcrowding at the household level is clearly illustrated in Table 8.7 which shows that 55.8 percent of households with size of four have only one sleeping room. Similarly, 40.5 percent of households with size of five, 32.0 percent of households with size of six and 26.1 percent of households with size of seven have only one sleeping room.

**Table 8.7: Household size and number of sleeping rooms occupied in dwelling unit**

## 8.6 Access to Utilities and Household Facilities

### 8.6.1 Source of lighting

Table 8.8 and Figure 8.1 report the main sources of lighting to urban and rural localities in the district. It is observed that electricity (mains) used by about three in four households (74.9%), is the major source of lighting in the district.

**Figure 8.1: Five main source of Energy for Lighting**

Source: Ghana Statistical Service, 2010 Population and Housing Census

The data in Table 8.8 shows that 75.1 percent of urban households and 72.6 percent of rural households have access to electricity. Apart from the national grid, other forms of lighting such as kerosene lamp (13.1%), flashlight/touch (7.5%), candle (2.0%), electricity (private generator) (1.3%) are patronized in the district.

**Table 8.8: Main source of lighting of dwelling unit by type of locality**

Main source of light	Total country	Region	District			
			Total		Urban	Rural

## 8.6.2 Source of cooking fuel and cooking space

From Table 8.9, it is shown that 45.8 percent of the households use charcoal as the main source of cooking fuel. A substantial number of households use gas as cooking fuel (44.7%). Households do not really patronize the other types of cooking fuel as charcoal and gas. With regards to urban and rural localities, the proportion of households that use gas in urban localities (45.3%) is more than rural localities (39.5%) while households in rural localities that use charcoal is higher (52.4%) than urban localities (45.1%).

Table 8.9 shows that, over one-third (38.9%) of households in the district use separate room for exclusive use as their cooking space. It is also observed that slightly less than one-third (31.7%) use the veranda as cooking space while 17.1 percent use the open space in compound. Among urban and rural localities, there is only a marginal difference with regards to separate room for exclusive use as their cooking space (38.9% and 39.5%) for urban and rural respectively. Close to one-third (32.2%) use the veranda as cooking space in urban localities as compared to 26.7 percent in rural localities.

**Table 8.9: Main Source of cooking fuel, and cooking space used by households**

## 8.7 Main Source of Water for Drinking and other Domestic Use

### 8.7.1 Main Source of Water for Drinking

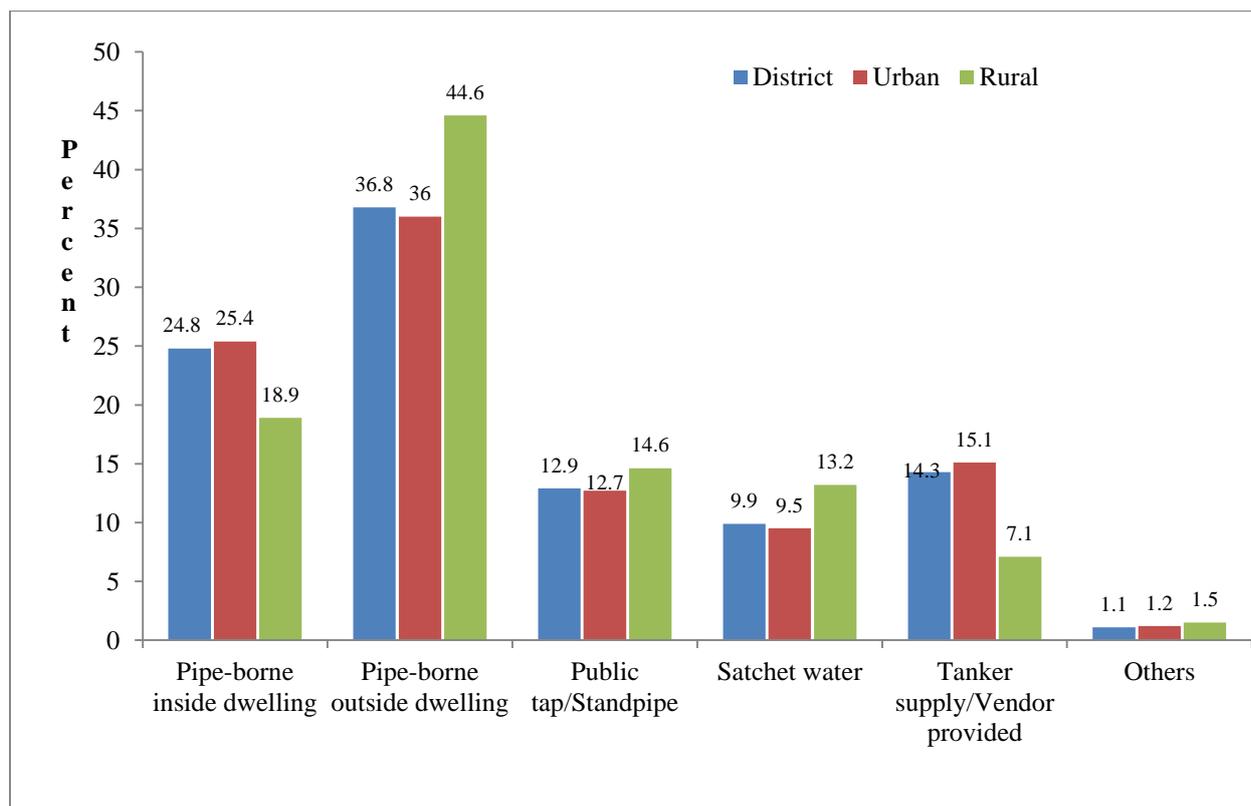

Figure 8.2 presents the five main water source for drinking in the district. The most common sources are pipe-borne water outside the dwelling (36.8%) followed by pipe-borne water inside dwelling constitute 24.8 percent in the district. Water for drinking is also derived from tanker supply/vendor provided (14.3%), public tap/standpipe (12.9%) and sachet water purchased commercially from several outlets (9.9%).

Pipe-borne water outside the dwelling is the major source of drinking water for both rural and urban residents of the district used by 44.6 percent and 36.0 percent of households respectively. The proportions of households using pipe-borne water inside the dwelling are 18.9 percent and 25.4 percent for rural and urban areas respectively.

### 8.7.2 Main Source of Water for other Domestic Use

The main source of water for domestic purposes in the district are pipe borne water outside dwelling unit (39.3%), pipe-borne water inside dwelling unit (26.8%), tanker supply/vendor provided (17.9%) and public tap/stand pipe (13.9%). The other types of water for domestic use are not very much patronized in the district. Households in rural localities resort to pipe-borne water outside dwelling (51.6%) and Public tap/Standpipe (15.6%) more than urban localities (38.0% and 13.7%) respectively. Of pipe-borne inside dwelling and tanker supply/vendor provided, higher proportions of urban localities use them more than rural localities.

## 8.8 Toilet and Bathing Facilities

### 8.8.1 Toilet facilities

Table 8.11 and Figure 8.4 show the type of toilet and bathing facilities used by households in the district. With regards to the patronage of toilet facilities, it is observed that public toilet facilities are the most popular used by 27.1 percent of households. Open defecation is quite high in the district with 23.9 percent of households engage in this practice. Other facilities used include the water closet toilet (26.1%), KVIP (14.4%) and pit latrine (7.5%).

Of urban and rural toilet facilities usage in the district, public toilet is patronised by 35.1 percent of rural households and 26.2 percent of urban households. Further, a higher proportion of urban households use water closet toilet facility (27.2%) compared to rural households (15.4%). Open defecation is more common in rural localities (26.2%) than urban localities.

**Figure 8.3: Toilet facilities used by household**

Source: Ghana Statistical Service, 2010 Population and Housing Census

### 8.8.2 Bathing Facilities

Table 8.11 shows that almost one third (32.0%) of households in the district own bathroom for exclusive use. It is also observed that shared separate bathroom in the same house (28.0%) and shared open cubicle (22.0%) are relatively common. The use of public bath house is used by only 3.0 percent of households. Bathroom in another house (3.0%) and open space around the house (5.0%) are also relatively less popular sources of bathing facilities in the district.

Proportionally, there are more urban households having their own bathroom for exclusive use (33.3%) than rural households (23.9%). However, rural households tend to use separate bathroom in the same house (34.1%) at a higher rate than urban households (27.0%). With regards to shared open cubicle, the difference in popularity of its use is relatively small between urban and rural households (22.0% versus 24.6%).

**Table 8.11: Bathing facility and toilet facilities used by household**

## 8.9 Method of waste disposal

### 8.9.1 Solid waste

Table 8.12 shows the methods of rubbish and liquid waste disposal by households in the district. Public dump (container) (32.0%) is the most commonly method used in waste disposal. Close to three in 10 (29.2%) households have their wastes collected from their homes by private/public companies. About one in 20 households (5.2%) dispose off their rubbish indiscriminately. Between the urban and rural localities, it is observed that, there is only a marginal difference between those who dispose off their rubbish indiscriminately (5.2% versus 5.0%). Urban households use the collection method more than rural households (30.3% versus 19.0%).

### 8.9.2 Liquid waste

Table 8.12 shows that (37.5% percent of households throw liquid waste onto compound and about three in 10 households (29.2%) also throw liquid waste onto the street/outside. About one out of ten (10.5%) throws the liquid waste through a drainage system into the gutter. Proportionally, there is only a slight difference between urban and rural households concerning the methods of liquid waste disposal onto compound and onto the street/outside.

**Table 8.12: Method of rubbish and liquid waste disposal by households**

Method of waste disposal	Total country	Region	District			
			Total		Urban	Rural

# **CHAPTER NINE**

## **SUMMARY OF FINDINGS AND POLICY IMPLICATIONS**

### **9.1 Introduction**

This chapter presents a summary of the findings and policy implications chapters based on analysis of selected topics of the 2010 Population and Housing Census for Kpone-Katamanso District in the Greater Accra Region.

### **9.2 Summary of Findings**

#### **9.2.1 Population size, composition and Age Structure**

The district has a population of 109,864 whereas the region has a total population of 4,010,054. Therefore district population represents about 3 percent of the regional population. The sex distribution shows that 48.7 percent of the population are males and 51.3 percent are females.

The district age structure has a youthful population with more of the youth at the base of the population pyramid with the old age forming a very small number at the top. The sex ratio in the district is 94 males to every 100 females; while the dependency ratio in the district is 58 to every 100 people aged 15-64 years.

#### **Fertility, Mortality and Migration**

The total fertility rate is 2.6 children per woman while the general fertility rate is 81.9 live births per 1000 women. The death rate is 4.0 deaths per 1000 population. About seven out of ten (70%) of the population in the district are migrants with most of them coming from the Volta, Eastern and Central regions.

#### **9.2.2 Household Size Structure and Composition**

The total number of households in the district is 106,398. About 25.2 percent of the household population are heads, with 34.4 percent being males and 16.6 percent females. The Nuclear family system constitutes 34 percent of the household structure in the district, while the Extended family system account for 21 percent. There are more single parents in the district who are female as compared to males who are single parents.

#### **Marital Status**

Ninety-one percent of the population in the age group 12-19 have never been married. The data shows that from age 12-14 the age group for the married population increases to about 40-44 and begins to decline. From that same age group (40-44), it is observed that the widowed population begins to increase. The district has 50.2 percent widows and 8.2 percent widowers...

Never married population constitutes the highest (43%) of the population 12 years and older and married population is 42 percent. More than half of the various marital categories have attained basic level education. Of the married (42.1%) population, the proportion of population 12 years and older, who are employed is 81.0 percent and unemployed is 4.7 percent.

## **Nationality and Religion**

Majority (95.3%) of the population in the district is Ghanaian by birth and 2.1 percent are other Nationals (other African and ECOWAS). Majority (88.2%) of the total population in district are reported to have Christian affiliation, while Islam account for 7.2 percent.

## **Literacy and Education**

The results indicate that 49.3 percent of persons 11 years and older are literate in English and a Ghanaian Language and another 44.0 percent in English only. The proportion literate in a Ghanaian Language was only 3.9 percent. In addition, less than one percent are literate in French and English or English, French and a Ghanaian Language.

### **9.2.3 Economic Characteristics**

Chapter Four analysed the economic characteristics of the population of the district. It shows that 75.1 percent of the population in the district are economically active as compared to 57.0 percent for Greater Accra Region. A higher proportion of males (78.2%) than females (72.3%) are economically active. Nine out of ten of the economically active population are employed and one out of ten is unemployed. Proportionally, male employed is slightly higher than female employed persons. Among the employed persons, the highest proportion is aged between 25 and 39 years. The highest unemployed population is aged between 20 and 29 years. Persons aged between 15 and 19 years are more likely to be economically not active and more than half (53.3%) of the economically not active population are into full time education. Females are more likely to be economically not active than males.

Service and sales workers accounts for a little over one-third of all persons employed. Skilled agricultural, forestry and fishery workers in the district are only 4.1 percent of the employed population. About three in 10 (28.8%) of the employed population work in the wholesale and retail, repair of motor vehicles and motorcycles industry. Females dominate the wholesale and retail repair of motor vehicles and motorcycles and accommodation and food service activities industries. Males dominate agriculture, forestry and fishing, construction, transportation and storage activities.

The private informal sector employs almost three-quarters (70.5%) of those aged 15 years and older. Females dominate the private informal sector while males dominate the private formal and government/public sectors.

### **9.2.4 Information Communication Technology**

ICT has become an important tool in various facets of life and this is reflected in the observed numbers and proportions of the population with access to mobile phones and internet facilities as well as household ownership of computers and fixed telephone lines.

With respect to ownership of mobile phones, seven out of ten of the population 12 years and older own mobile phones. Only 16.7 percent of the population 12 years and older use internet facilities in the district. Individuals who use the Internet are more likely to be young, educated, and reside in urban areas.

Only 2.3 percent of households in the district have fixed telephone lines services. Rural households are less likely to have a fixed telephone line than urban households. It is also observed that 15.4 percent of households in the district own either a desktop or laptop computer.

### **9.2.5 Disability**

With a population of 2,020 persons, PWDS accounted for 1.8 percent of the total population in the district. The majority of PWDs are in urban areas. Proportionately, it is more likely for females to suffer from some form of disability than males. For all disabled people, 15 years and older, 55.4 percent of PWDs are employed and 39.8 percent are economically not active. Females with disability are more economically not active than their male counterparts. Generally, persons with disability are able to access education but only few are able to attain higher levels of education. Thus, the educational attainment PWDs is generally low.

### **9.2.6 Agricultural Activity**

Agricultural activity is not very popular in the district due to its gradual transformation from rural to urban status. The population of agricultural households constitute only 8.4 percent of the total households. Of the agricultural households, a little over two-thirds are engaged in crop farming, 45.0 percent produce livestock while only 1.4 percent are into tree growing.

### **9.2.7 Housing Conditions**

The total number of houses in the district is 15,801, representing 22 percent of the total number of houses in the district. Although there had been an increase in the construction of modern houses in the form of bungalows and flats, compound houses account for 51.4 percent of occupied dwellings in the district. The proportion of houses with outer walls constructed with earth, mud/mud bricks is 1.9 percent. Conversely, the proportion of dwelling units with cement or concrete walls is 83.1 percent. About 68.5% of dwelling units are roofed with metal sheet. The average number of persons per house is 1.7 persons.

Forty-five percent of dwelling units are owned by a member residing in the household member while 39 percent is owned by a private individual who is not a member of the household. Seventy-five percent report the use of electricity (mains) as the main source of power for lighting. The proportions are 75.1 percent for urban areas and 72.6 percent for rural areas. This shows that there is only a marginal disparity between rural and urban areas access to electricity.

The proportion with exclusive cooking space in the household is 38.9 percent in the district (38.9% urban; 39.5% rural). In one out of three dwelling units, the veranda is used as the cooking space. The two main sources of energy for household cooking in the district is charcoal (45.8%) and gas (44.7%). The proportion using wood constitutes 2.4 percent.

Furthermore, 36.8 percent of dwelling units have access to pipe-borne water as the main source of drinking water. In urban areas 13.2 percent reported using sachet water as the main source of drinking water. Sanitation and the availability of toilet facilities are poor or inadequate. For instance, 26.1 percent of dwelling units have access to WC and 27.1 percent use the public toilet facilities. One in five dwelling units have no toilet facilities and household members either use open fields, the beach or other open areas.

The main modes of solid waste disposal are public dump site (32.0%) and dumping in a public container with periodic collection (23.8%). Five percent of dwelling units dumped their solid waste indiscriminately. Collection of wastes from homes by either private or public companies is used by 29.2 percent of households. More than one third of households (37.5%) throw their liquid waste on to the compound.

### 9.3 Policy Implications

With the presence of a lot of industries which serve as a pull factor for most of the immigrants who forms 70 percent of the total population in the district, it is expected that the population will further increase in the near future. Migration has played a major role in the economic development of the district in the past and will continue to do so.

Estimates derived from the 2010 Census data indicate that both infant and under-five mortality are higher in rural than in urban areas. Inequities in the distribution of medical and health facilities, and the availability of other social services such as sanitation and water between rural and urban areas would need to be addressed. For instance, the provision of Community Health Planning Services (CHIPS) compounds in the rural areas would have to be pursued while at the same time improving the quality of health infrastructure in all parts of the district

Also, the total fertility rate of (2.6) per woman and the youthful population which forms a broad base in the district are likely to influence population explosion in the district. Policies therefore should be directed at creating room to absorb this expected growing population in the near future. The rapid growth of the adolescent and youth population exerts increased pressure to expand education, health services and employment opportunities. In addition to increasing services and facilities to cope with large numbers of young people, the expansion of this segment of the population provides the following opportunities:

The 1994 Revised Population Policy of Ghana seeks to reduce fertility through a number of social interventions. The findings that mean age at first marriage is rising suggest that late entry into marital unions could be targeted for achieving lower fertility goals. As women spend more time schooling, the chances of entering to early marriages reduce, which then reduces their fertility potentials as well as changing high fertility intentions. To that extent, there is a need to provide more access to formal education by removing economic and spatial barriers. This is likely to have positive effects on fertility.

With only a few years to the completion of MDGs, Ghana is about 10 percent short of achieving universal basic education. The number of activities aimed at promoting gender parity at the primary school level seems to have been largely achieved with near-equal proportion of males and females in school. Differences in school participation between males and females have remained at the post-secondary level. The policy to promote gender equity in education should pay more attention to female participation in education beyond the junior high school level.

The fact that nearly three-quarters of the population are literate in at least one language should make us start thinking in terms of functional literacy which is important for development in that it facilitates easy dissemination of information based on the assurance that people can receive simple instructions in a written form. There should be more effort in pushing the level of literacy further and to consciously capitalize on it to give development-related information to the people in simple language. Such information should come in the form of simple messages which should target functional groups such as farmers, fishermen, hairdressers and tailors/seamstresses.

Ghana is surrounded by Francophone countries and one would have expected that a significant proportion of the population in Ghana will be literate in French. At one percent, the level of literacy in French is low. There is the need to increase the level of literacy in French to deepen the relationship between us and our neighbours. The compulsory teaching

of French at the basic level of education is a step in the right direction. However, it does not seem to have made any meaningful impact yet. The way forward is to intensify and encourage the teaching of French and also put in student reward system to motivate students who excel in French.

The unemployment rates, especially for the 20-29 years in the district, are relatively high. As a matter-of-fact, value adding employment policy initiatives and actions are needed to address this situation. In view of this, there is the need for the district to tap into the government actions on the Local Enterprise and Skills Development Programme (LESDEP). There is a need for the government to make conscious policy on industrial attachment for tertiary institutes to equip young graduates with some employable skills.

Despite the private sector being said to be the engine of growth in the economy, the private sector is not in the right position to employ people in the district. As a matter of fact, for the private sector in the district to be considered as an engine of growth, public-private partnership should be the way forward.

The penetration of mobile phones among the populace offers an opportunity for government agencies, private companies and community organizations to disseminate important public information through that medium. Programme activities and interventions within a particular community can be communicated to the beneficiaries through this medium to solicit for support and community ownership of projects. Similarly, the Ghana Education Service through the District Directorate of Education can develop software to communicate or send pupils report or complain to parents through mobile phones.

With regards to internet facilities, the District Assembly should continue with its efforts in the provision of internet facilities/centers in public places such as libraries and community centres. It is hoped that, upon completion the level of access to internet will improve in the district.

Efforts must be made to improve the educational attainment of PWDs in the district. These should include the establishment of special schools for children with disability, giving support services to persons with disabilities, for example, provision of hearing aid, Braille and wheel chairs among others to PWDs which in turn will encourage them to attend school and participate fully in school activities in the district. In order to ensure higher levels of educational attainment of persons with disability, the district should set up special fund from the disability funds to support these people through scholarship schemes.

On educational attainment, Government should build specialized schools for PWDs especially those with intellectual difficulties and also provide subsidies for parents whose children attend these schools. Also, the district should collaborate with donor organizations and well established companies in the district to build skill development training centres to train PWDs in various skills that will make them employable to enable them to live decent and quality lives. Further, a platform should be created in the district to assist persons with sight disability to get assistance either in the form of eye surgery or the provision of spectacles.

The district is gradually growing to become an urban locality where agricultural activities such as crop production and tree crop cultivation are no longer practiced. Increasingly, farmlands are being converted to residential lands and properties. There is a need to encourage some form of backyard gardening among the population to encourage the production and use of local foodstuffs and improve economic conditions of households.

The census data provide an aggregate picture of the housing and social amenities such as water, sanitation, electricity and other facilities. The general observation is that for the district is that housing and associated facilities are either inadequate, unreliable or of poor quality. Therefore, there is the need for government to enforce the minimum standards of house construction and the provision of basic facilities such as cooking areas and toilets in houses.

Government policy should also be geared towards the modernization and expansion of housing styles (e.g. compound houses) which are able to house more people than the current approach of individual structures. There should be a process of providing facilities such as pipe-borne water supply and sanitation services in new and emerging suburb in urban areas while modernizing and improving sanitation in old settlements.

The proportion of the population with access to adequate and hygienic toilet facilities in households is low. The district should ensure and enforce the various sanitation laws and bye-laws at the community level on home ownership of clean toilet facilities as well as maintain clean public toilet facilities.

Water supply continues to be a challenge in the district. Communities in both urban and rural areas do not have adequate, reliable and clean water supply throughout the year. In the absence of adequate supply of good drinking water, bottled and sachet water have emerged to meet the need for clean drinking water. However, the disposal of the sachets and the bottles has come at a cost to the district. In an effort to meet water and sanitation targets in the MDGs, the district should develop programmes and projects in line with national objectives to solve water and sanitation challenges in the district.
